Course guide
240624 - 240624 - The History of Applied Mathematics in Engineering

Unit in charge: Barcelona School of Industrial Engineering
Teaching unit: 749 - MAT - Department of Mathematics.

Degree: BACHELOR’S DEGREE IN INDUSTRIAL TECHNOLOGY ENGINEERING (Syllabus 2010). (Optional subject).

Academic year: 2023  ECTS Credits: 3.0  Languages: Catalan, Spanish

LECTURER

Coordinating lecturer: Mª Rosa Massa Esteve
Others: Mª Rosa Massa Esteve

PRIOR SKILLS

Students with the knowledge of mathematics of first course could follow easily the course.

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Transversal:
1. SELF-DIRECTED LEARNING. Detecting gaps in one's knowledge and overcoming them through critical self-appraisal. Choosing the best path for broadening one's knowledge.
2. EFFICIENT ORAL AND WRITTEN COMMUNICATION. Communicating verbally and in writing about learning outcomes, thought-building and decision-making. Taking part in debates about issues related to the own field of specialization.
3. TEAMWORK. Being able to work as a team player, either as a member or as a leader. Contributing to projects pragmatically and responsibly, by reaching commitments in accordance to the resources that are available.
4. Effective use of Information Resources. Managing the acquisition, structure, analysis and display of information from the own field of specialization. Taking a critical stance with regard to the results obtained.

TEACHING METHODOLOGY

LEARNING OBJECTIVES OF THE SUBJECT

The history of sciences gives a dynamic and humanist view that contribute to the integral formation of students and besides complement the thematic study of the textbooks. The course complements the scientific formation of students, analysing the treats more relevant in the history on the relationship between mathematics and engineering.

STUDY LOAD

Total learning time: 75 h
CONTENTS

Tema 1. Mathematics and engineering in the Antiquity

Description:

Full-or-part-time: 10h
Theory classes: 4h
Self study: 6h

Tema 2. Engineers-Artists in the Renaissance

Description:

Full-or-part-time: 20h
Theory classes: 8h
Self study: 12h

Tema 3. The algebraization of mathematics. Scientific Revolution

Description:

Full-or-part-time: 15h
Theory classes: 6h 20m
Self study: 8h 40m

Tema 4. Applied Mathematics and engineering in the Ilustration

Description:
The works of Leonhard Euler, mathematic and engineer of the eighteenth century: Mechanics of the science of motion 2 volumes (1736). The Encyclopedie and the Ilustration. D'Alembert and the applied mathematics.

Full-or-part-time: 20h
Theory classes: 10h
Self study: 10h
Tema 5. Mathematical courses for engineers, mixed mathematics. The Royal Militar Academy of Mathematics in Barcelona (1720)

Description:
The origen of the engineering in Catalogne. The relations and contents of the mathematical courses for engineers of eighteenth century in France, Spain and Portugal: Belidor, Lucuce and Pimentel.

Full-or-part-time: 10h
Theory classes: 4h
Self study: 6h
