Course guide
2500029 - GECINFTRAN - Transportation Infrastructures

Unit in charge: Barcelona School of Civil Engineering
Teaching unit: 751 - DECA - Department of Civil and Environmental Engineering.

Degree: BACHELOR’S DEGREE IN CIVIL ENGINEERING (Syllabus 2020). (Compulsory subject).

Academic year: 2022 ECTS Credits: 6.0 Languages: Spanish, English

LECTURER

Coordinating lecturer: ADRIANA HAYDEE MARTINEZ REGUERO
Others: ADRINA BACHILLER SAÑA, CARLES CASAS ESPLUGAS, ADRIANA HAYDEE MARTINEZ REGUERO

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
14413. Capacity for the construction and conservation of roads, as well as for the dimensioning, the project and the elements that make up the basic road equipment. (Specific technology module: Civil Construction)
14414. Capacity for the construction and conservation of railway lines with knowledge to apply specific technical regulations and differentiating the characteristics of the mobile material. (Specific technology module: Civil Construction)
14422. Capacity for the construction and conservation of roads, as well as for the dimensioning, the project and the elements that make up the basic road equipment. (Specific technology module: Urban Transport and Services)
14423. Capacity for the construction and conservation of railway lines with knowledge to apply specific technical regulations and differentiating the characteristics of the mobile material. (Specific technology module: Urban Transport and Services)
14426. Knowledge of the design and operation of infrastructures for modal exchange, such as ports, airports, railway stations and transport logistics centers. (Specific technology module: Urban Transport and Services)

General:
14380. Scientific-technical training for the exercise of the profession of Technical Engineer of Public Works and knowledge of the functions of advice, analysis, design, calculation, project, construction, maintenance, conservation and exploitation.
14383. Ability to project, inspect and direct works, in their field.
14385. Ability to carry out territorial planning studies and environmental aspects related to infrastructure, in its field.
14386. Capacity for maintenance, conservation and exploitation of infrastructure, in its field.
14391. Conceive, project, manage and maintain systems in the field of construction engineering. Cover the entire life cycle of an infrastructure or system or service in the field of construction engineering. (Additional school competition).

TEACHING METHODOLOGY

The course consists of 4 hours per week of classroom activity.

The 2.5 hours are devoted to theoretical lectures, in which the teacher presents the basic concepts and topics of the subject, and the 1.5 hours are devoted to show examples and solves exercises (average).

Support material in the form of a detailed teaching plan is provided using the virtual campus ATENEA: content, program of assessment activities and conducted learning, literature.

Although most of the sessions will be given in the language indicated, sessions supported by other occasional guest experts may be held in other languages.
LEARNING OBJECTIVES OF THE SUBJECT

Students will acquire an understanding of highway construction, preservation, design and planning, as well as the various basic roadway elements. Introduction to railway construction and preservation.

1. Ability to design a road according to traffic and other conditions.
2. Ability to design the horizontal layout and vertical profile of a transport infrastructure.

Total learning time: 150 h

CONTENTS

0. Presentation

Description:
Objectives, faculty, calendar, evaluation system, bibliography.

Specific objectives:
Presentation of the course: objectives, faculty, calendar, system evaluation, bibliography.

Full-or-part-time: 4h 48m
Theory classes: 2h
Self study: 2h 48m
1. ROADS. Construction of earthworks

**Description:**
Soil classification problems.
Factors affecting the process of compaction, moisture, compaction type and energy, soil type. Proctor test. Moisture and density measurement.
Soil compaction problems

**Full-or-part-time:** 19h 12m
Theory classes: 4h
Practical classes: 4h
Self study : 11h 12m

2. Subgrades

**Description:**
Bearing capacity and subgrade design problems.

**Full-or-part-time:** 9h 36m
Theory classes: 2h
Practical classes: 2h
Self study : 5h 36m

3. Drainage

**Description:**

**Full-or-part-time:** 4h 48m
Practical classes: 2h
Self study : 2h 48m

4. Pavements

**Description:**
Work units. Materials and tests.
Pavement design problems. Norma 6.1-IC "Secciones de Firme".
Work units. Materials and tests.

**Full-or-part-time:** 26h 24m
Theory classes: 5h
Practical classes: 3h
Laboratory classes: 3h
Self study : 15h 24m
5. Circulation

**Description:**
Traffic Variables. Relationships between traffic variables

**Full-or-part-time:** 2h 24m
Theory classes: 1h
Self study : 1h 24m

---

6. Traffic studies

**Description:**
Traffic forecasting. Traffic studies "in situ"

**Full-or-part-time:** 2h 24m
Theory classes: 1h
Self study : 1h 24m

---

7. Capacity and levels of services

**Description:**
Definitions and conditions. Level of service (L.O.S.) in freeways.
Exercises

**Full-or-part-time:** 4h 48m
Theory classes: 1h
Practical classes: 1h
Self study : 2h 48m

---

8. Introduction of geometric design

**Description:**
- La Instrucción 3.1-IC: approach and presentation.
- Horizontal alignment.
- Vertical alignment.
- Cross section.
- Speed Reference.
- Visibility.
- Terrain.
- Coordination horizontal-vertical alignment.

**Full-or-part-time:** 2h 24m
Theory classes: 1h
Self study : 1h 24m
9. Horizontal alignment

**Description:**
* Straight alignments.
* Circular curves.
* Transition curves.
* Relationship between radius and superelevations.

* Shape and characteristic parameters.
* Minimum length.

- Alignments
  - Straight - Circular
  - Reverse curve (S-shaped curve)
  - C curve (spiral connecting two circular curves with different radius)
  - Combination of two spirals

**Full-or-part-time:** 12h
Theory classes: 2h
Practical classes: 3h
Self study: 7h

10. Vertical alignment

**Description:**
* Calculation axis.
* Grade inclination.
* Ramps and slopes
* The parabola.

Minimum parameters of the agreements.

Sag vertical curve.
Crest vertical curve

**Full-or-part-time:** 4h 48m
Theory classes: 1h
Practical classes: 1h
Self study: 2h 48m

11. Cross section

**Description:**
* Number of lanes of reference section.
* Cross section on the ground.
  
Superelevation transition.

**Full-or-part-time:** 2h 24m
Theory classes: 1h
Self study: 1h 24m
### 12. Railways. Introduction

**Description:**
General concepts, organization of the sector and services.

**Full-or-part-time:** 4h 48m  
Theory classes: 2h  
Self study: 2h 48m

### 13. Track and Rolling Stock

**Description:**
The difficulties of operating a railway line. Main characteristics of a track, both of the infrastructure and of the railway superstructure. Plate track and ballast track. Characteristics of the rolling stock.

**Full-or-part-time:** 9h 36m  
Theory classes: 4h  
Self study: 5h 36m

### 14. Rail curve circulation

**Description:**
The principles of circulation in curves. Geometric design criteria for railway lines. Pendulum and tipping vehicles. Systems to increase the speed of circulation in a railway line.

**Problems**

**Full-or-part-time:** 9h 36m  
Theory classes: 2h  
Practical classes: 2h  
Self study: 5h 36m

### 15. The geometric quality of the track

**Description:**
Parameters that define the geometric quality of the track. Track geometry registration systems. Numerical quantification of the state of the geometric quality of the road. Construction, service and control tolerances. The case of high speed lines.

**Full-or-part-time:** 4h 48m  
Theory classes: 2h  
Self study: 2h 48m
### 16. Railway infrastructure and superstructure

**Description:**
Evaluation of the vertical efforts of a railway line (Interaction track-vehicle): Movements of the railway vehicle, vertical efforts transmitted by the vehicles in the lane, first expressions for the evaluation of the vertical efforts, the works of Birmann and Eisenmann, Prudhomme formula and its impact on the design of the track and railway vehicles.

Mechanical analysis and design of the railway infrastructure and superstructure: mechanical analysis of the behavior of the track against the vertical efforts and design of the track. Structural catalogs.

Transversal dynamics: guidance of vehicles, analysis of transversal efforts, practical expressions, lateral resistance of a track and design criteria.

Problems.

**Full-or-part-time:** 16h 48m  
Theory classes: 5h  
Practical classes: 2h  
Self study: 9h 48m

### 17. Turnouts

**Description:**
Types of turnouts. The railway diversion and elements that make it up. Characteristics of high speed deviations.

**Full-or-part-time:** 2h 24m  
Theory classes: 1h  
Self study: 1h 24m
GRADING SYSTEM

For assessment purpose, the course consists of two parts: Roads (C), and Railways (FC).

The Mark of the course will be the weighted mean of the mark of each of two three parts if the student has got a mark equal to or higher than 4.0 in each one of them:

\[
\text{Mark of the course} = \frac{2}{3} \text{Mark C} + \frac{1}{3} \text{Mark FC}
\]

Otherwise, the Mark will be the mean of the mark obtained in each of the two parts according to the following expression:

\[
\text{Mark of the course} = \frac{3}{\left(\frac{2}{\text{Mark C}} + \frac{1}{\text{Mark FC}}\right)}
\]

To pass the course, the student's course Mark must be equal to or higher than 5.0.

The mark of each part will be obtained as described below.

In the case of Roads (C) there will be some assessable activities during the course. The mark of this part will be the weighted mean of each exam (90%) and the assessable activities (10%):

\[
\text{Mark C} = 0.90 \text{ Mark Roads exams} + 0.10 \text{ Roads assessable activities}
\]

The mark of Railways (FC), will be the weighted mean obtained in the corresponding exams (80%) and the assessable activities that will be developed during the course (20%):

\[
\text{Mark FC} = 0.80 \text{ Mark Railways exams} + 0.20 \text{ Railways assessable activities}
\]

The Mark will be NP when the student does not attend any of the three exams described above and there will be no mark for the student.

Furthermore, at the end of the course, there will be a retaking exam exclusively for the students that, having a numerical Mark, this is not equal to or higher than 5.0.

Once this retaking exam has been taken the mark of each part will be the highest one obtained either in the course or in the retaking exam.

The retaking exam will be compulsory for the students that have one or more of the partial marks lower than 4.0 and the Mark of the course also lower than 4.0. The Mark will be NP when being compulsory the attendance at one of the retaking exams, the student does not attend it.

Criteria for re-evaluation qualification and eligibility: Students that failed the ordinary evaluation and have regularly attended all evaluation tests will have the opportunity of carrying out a re-evaluation test during the period specified in the academic calendar. Students who have already passed the test or were qualified as non-attending will not be admitted to the re-evaluation test. The maximum mark for the re-evaluation exam will be five over ten (5.0). The non-attendance of a student to the re-evaluation test, in the date specified will not grant access to further re-evaluation tests. Students unable to attend any of the continuous assessment tests due to certifiable force majeure will be ensured extraordinary evaluation periods.

These tests must be authorized by the corresponding Head of Studies, at the request of the professor responsible for the course, and will be carried out within the corresponding academic period.

EXAMINATION RULES.

The Mark will be NP when the student does not attend any of the three exams described above and there will be no mark for the student.

The Mark will be NP when being compulsory the attendance at one of the retaking exams, the student does not attend it.
