Course guide
250556 - QUIMEDMARI - Marine Environment Chemistry

Unit in charge: Barcelona School of Civil Engineering
Teaching unit: 751 - DECA - Department of Civil and Environmental Engineering.
Degree: BACHELOR'S DEGREE IN MARINE SCIENCE AND TECHNOLOGY (Syllabus 2018). (Compulsory subject).

Academic year: 2022  ECTS Credits: 6.0  Languages: Catalan

LECTURER
Coordinating lecturer: PATRICIA ROVIRA BASTUS
Others: PATRICIA ROVIRA BASTUS

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
13388. To know and apply the lexicon and concepts of the Marine Sciences and Technologies and other related fields.
13390. Establish a good practice in the integration of common numerical, laboratory and field techniques in the analysis of any problem related to the marine environment.
13395. To set, evaluate and propose solutions to the different conflicts of use and exploitation in the marine and coastal environment resources based on scientific and technical criteria.

Generical:
13380. Develop a professional activity in the field of Marine Sciences and Technologies.
13381. Address in a comprehensive manner the analysis and preservation of the marine environment with sustainability criteria.

TEACHING METHODOLOGY

The subject consists of 4.0 hours per week of classroom lessons in the classroom (large group). Of these, and as an average throughout the course, they dedicate 1 hour to the resolution of problems with a greater interaction with the student. Practical exercises are carried out in order to consolidate the general and specific learning objectives. Support material is used in the format of a detailed teaching plan through the ATENEA virtual campus: contents, programming of assessment activities and directed learning and bibliography.

Although most of the sessions will be given in the language indicated, sessions supported by other occasional guest experts may be held in other languages.

LEARNING OBJECTIVES OF THE SUBJECT

This course focuses on the study of the composition of seawater and the relationship between the oceans and the atmosphere. These topics will be developed through the study of the origin, distribution and evolution of the salinity of ocean waters, the chemistry of gas-liquid interactions, and the description of organic compounds (both natural and anthropogenic) and their role in a variety of oceanic processes.

**Total learning time:** 150 h

CONTENTS

**Chemical composition of seawater**

**Description:**
- Components of seawater: major and minor elements
- Salinity, temperature and density of sea water
- Solubility of gases and processes of ocean-atmosphere exchange

**Exercises**

**Full-or-part-time:** 19h 12m
- Theory classes: 6h
- Practical classes: 2h
- Self study: 11h 12m

**Fundamentals of Organic Chemistry**

**Description:**
- Structure and classification of organic compounds
- Acidity of organic compounds, Resonance
- Isomerism and stereochemistry
- Introduction to the reactivity of organic compounds: types of reactions and mechanisms

**Exercises**

**Full-or-part-time:** 36h
- Theory classes: 10h
- Practical classes: 5h
- Self study: 21h

**Evaluation**

**Full-or-part-time:** 16h 48m
- Laboratory classes: 7h
- Self study: 9h 48m
Hydrocarbons and derivatives

Description:
- Saturated hydrocarbons: alkanes and cycloalkanes. Conformational analysis.
- Unsaturated hydrocarbons: alkenes and alkynes
- Aromatic hydrocarbons

Exercises

Full-or-part-time: 24h
- Theory classes: 6h
- Practical classes: 4h
- Self study: 14h

Properties and reactivity of functional groups

Description:
- Alkyl halides: nucleophilic substitution and elimination
- Ethers, alcohols and phenols

Exercises

Carbonyl compounds: ketones, aldehydes, carboxylic acids and derivatives
- Amines and nitrogen compounds
- Laboratory / field trip

Exercises

Full-or-part-time: 48h
- Theory classes: 11h
- Practical classes: 4h
- Laboratory classes: 5h
- Self study: 28h

GRADING SYSTEM

The qualification of the subject is obtained from the qualifications of continuous evaluation of 2 partial tests (60%) and exercises and directed activities (40%). The teacher will provide the assessment criteria during the first week of the course.

EXAMINATION RULES.

Failure to perform a continuous assessment activity in the scheduled period will result in a mark of zero in that activity.

BIBLIOGRAPHY
