270008 - M2 - Mathematics II

Coordinating unit: 270 - FIB - Barcelona School of Informatics
Teaching unit: 749 - MAT - Department of Mathematics
Academic year: 2018
Degree: BACHELOR'S DEGREE IN INFORMATICS ENGINEERING (Syllabus 2010). (Teaching unit Compulsory)
ECTS credits: 7,5  Teaching languages: Catalan, Spanish, English

Teaching staff

Coordinator:
- Guillermo González Casado (guillermo.gonzalez@upc.edu)
- Natalia Sadovskaia Nurimanova (natalia.sadovskaia@upc.edu)

Others:
- Anna Rio Doval (ana.rio@upc.edu)
- Antoni Ras Sabido (antoni.ras@upc.edu)
- Daniel Barrera Salazar (daniel.barrera.salazar@upc.edu)
- Fernando Martínez Sáez (fernando.martinez@upc.edu)
- Jose Antonio Lubary Martinez (jose.a.lubary@upc.edu)
- Maria Isabel Gonzalez Perez (maria.isabel.gonzalez.perez@upc.edu)
- Mónica Sanchez Soler (monica.sanchez@upc.edu)
- Vera Sacristan Adinolfi (vera.sacristan@upc.edu)

Prior skills

Students are expected be competent in mathematics to upper secondary level.

Degree competences to which the subject contributes

Specific:
CT1.2A. To interpret, select and value concepts, theories, uses and technological developments related to computer science and its application derived from the needed fundamentals of mathematics, statistics and physics. Capacity to solve the mathematical problems presented in engineering. Talent to apply the knowledge about: algebra, differential and integral calculus and numeric methods; statistics and optimization.
CT1.2C. To use properly theories, procedures and tools in the professional development of the informatics engineering in all its fields (specification, design, implementation, deployment and products evaluation) demonstrating the comprehension of the adopted compromises in the design decisions.

General:
G7. AUTONOMOUS LEARNING: to detect deficiencies in the own knowledge and overcome them through critical reflection and choosing the best actuation to extend this knowledge. Capacity for learning new methods and technologies, and versatility to adapt oneself to new situations.
270008 - M2 - Mathematics II

Teaching methodology

Theory classes:
- lectures developing the theoretical aspects of the subject.
- lectures and participatory classes aimed at applying theory to problems.

Workshop/laboratory classes:
- participatory workshop sessions in which students solve problems in groups or individually.
- participatory laboratory sessions in which students complete problems individually or in groups using mathematical software.

Learning objectives of the subject

1. Understand real numbers and their properties. Solve linear equations and inequalities, with quadratic and / or absolute values.
2. Understand the basic concept of sequences, calculate the limits of sequences and identify between convergent, divergent and oscillating sequences.
3. Understand the basic theorems for continuous functions of one variable and know how to apply them to problems such as finding zeros for functions.
4. Understand the basic theorems of differentiable functions of one variable and understand and know how to use Taylor polynomial approximations.
5. Understand the basic concepts of the integration of functions of one variable: geometric interpretation, calculation of areas, approximate calculation of definite integrals, etc.
6. Understand the basic concepts of topologies in \( \mathbb{R}^n \).
7. Work with functions of several variables.
8. Understand and know how to interpret the concepts of directional derivative, partial derivative and gradient vector.
9. Locate and classify outliers in a function with several variables in a domain.

# Content

## Real numbers

**Degree competences to which the content contributes:**

**Description:**
Axiomatic introduction to real numbers. Absolute value of a number. Real number intervals.

## Numerical sequences

**Degree competences to which the content contributes:**

**Description:**

## Theorems for continuous functions of one variable

**Degree competences to which the content contributes:**

**Description:**

## Theorems for derivatives of functions of one variable

**Degree competences to which the content contributes:**

**Description:**

## Taylor formula for functions of one variable

**Degree competences to which the content contributes:**

**Description:**

## Fundamental theorem of integral calculus

**Degree competences to which the content contributes:**
### Functions of several variables

**Degree competences to which the content contributes:**

**Description:**
Basic definitions of topology. Functions of several variables: domain, graphics, level sets, geometric interpretation. Continuous functions.

### Partial and directional derivatives. Gradient vectors

**Degree competences to which the content contributes:**

**Description:**

### Taylor polynomials in several variables.

**Degree competences to which the content contributes:**

**Description:**

### Optimization of functions of several variables

**Degree competences to which the content contributes:**

**Description:**

## Functions of several variables

**Specific objectives:**
6, 7, 8

**Hours:** 28h
- Theory classes: 8h
- Practical classes: 0h
- Laboratory classes: 4h
- Guided activities: 0h
- Self study: 16h

## Optimization variables

**Specific objectives:**
6, 7, 8, 9

**Hours:** 32h
- Theory classes: 10h
- Practical classes: 0h
- Laboratory classes: 6h
- Guided activities: 0h
- Self study: 16h

## Course summary

**Specific objectives:**
1, 2, 3, 4, 5, 6, 7, 8, 9

**Hours:** 11h
- Theory classes: 6h
- Practical classes: 0h
- Laboratory classes: 2h
- Guided activities: 3h
- Self study: 0h

## Mid-semester exam (P1)

**Hours:** 7h 30m
- Guided activities: 1h 30m
- Self study: 6h

**Description:**
Exercise-based open-answer exam on learning objectives 1 to 5, referring to content for topics 1 to 6.

**Specific objectives:**
1, 2, 3, 4, 5

## Workshop

**Hours:** 7h
- Guided activities: 2h
- Self study: 5h
Technical and transferable competencies account for 80% and 20% of the subject, respectively. The transferable competency mark will be calculated on the basis of workshop/laboratory class and Atenea activities.

- Workshop mark (T): it represents 20% of the note and evaluates the student's performance and achievement of objectives in workshop / laboratory sessions and Atenea.
- Mark of the mid-semester exam (P1): it represents 40% of the note and corresponds to Calculus in 1 variable.
- Mark of the end-semester exam (P2): it represents 40% of the note and corresponds to the Calculus in several variables.
- Final exam (F): This exam is used to pass the subject to students who have not passed by course.

The final mark is calculated as:

$$\text{Note} = 0.2 \times T + \max (0.8 \times F, 0.4 \times P1 + 0.4 \times P2)$$
