Degree competences to which the subject contributes

Basic:
CB1. That students have demonstrated to possess and understand knowledge in an area of ??study that starts from the base of general secondary education, and is usually found at a level that, although supported by advanced textbooks, also includes some aspects that imply Knowledge from the vanguard of their field of study.

Specific:
CE1. Skillfully use mathematical concepts and methods that underlie the problems of science and data engineering.

Generical:
CG2. Choose and apply the most appropriate methods and techniques to a problem defined by data that represents a challenge for its volume, speed, variety or heterogeneity, including computer, mathematical, statistical and signal processing methods.

Transversal:
CT5. Solvent use of information resources. Manage the acquisition, structuring, analysis and visualization of data and information in the field of specialty and critically evaluate the results of such management.
CT6. Autonomous Learning. Detect deficiencies in one's own knowledge and overcome them through critical reflection and the choice of the best action to extend this knowledge.

Teaching methodology

Different methodologies will be considered for lectures, exercises and laboratory classes. The lectures will consist mainly of master classes, based on presentations and explanations on the slate; The problem classes will be to solve exercises and practice concepts learned in the theory sessions and in the laboratory classes, short projects will be solved using python.

Learning objectives of the subject

1. Acquisition of the basic knowledge of linear algebra (vector spaces, matrices, linear systems)
2. Recognize concepts of linear algebra within interdisciplinary problems.
3. Learn how to use linear algebra in solving problems of data analysis and modeling.
4. Using linear algebra tools in mathematical problems
5. Using software to solve exercises related to linear algebra
6. Understanding of the notions of matrix decomposition, its geometric interpretation and its application in exercise solving

## Content

### Matrices

**Degree competences to which the content contributes:**

**Description:**
Definition and operations with matrices, rank, elementary transformations.

### Linear systems

**Degree competences to which the content contributes:**

**Description:**
Gaussian elimination, discussion of solutions of linear systems, numerical methods for linear system solving. Linear systems in data modelization.

### Vector spaces

**Degree competences to which the content contributes:**

**Description:**
Vector space definition. Vectors, linear combinations, dependency, generators, bases, coordinates. Vector subspaces, intersection and sum.

### Linear maps

**Degree competences to which the content contributes:**

**Description:**
Linear maps, kernel and range, rank; matrix of a linear map in a basis; change of basis

### Diagonalization

**Degree competences to which the content contributes:**

**Description:**
Eigenvalues and eigenvectors; characteristic polynomial; algebraic and geometric multiplicity, diagonalization criteria, application to the computation of power of matrices and functions of matrices. Special case of Markov matrices and symmetric matrices.

### Linear discrete dynamical systems

**Degree competences to which the content contributes:**
Orthogonality

**Description:**
Madelling of problems via linear discrete dynamical systems, resolution and analysis of particular and generic solutions; long-term behaviour of the solutions; numerical methods for the computation of eigenvalues and eigenvectors; recurrences and homogeneous linear difference equations, resolution and study of the solutions.

**Orthogonality**

**Degree competences to which the content contributes:**
Inner product, norm, distance, angle; orthogonal complement and orthogonal projection; orthonormal basis and orthogonalization methods; orthogonal matrices and isometries; matrix norm; singular value decomposition, application to rank approximation and dimensional reduction in data and image analysis; bilinear and quadratic forms; spectral theorem and inertia indices.
## Planning of activities

| Development of topic 1 | Hours: 17h  
|  | Theory classes: 3h  
|  | Practical classes: 3h  
|  | Laboratory classes: 1h  
|  | Guided activities: 0h  
|  | Self study: 10h |

**Specific objectives:**
1, 2, 5

| Development of topic 2 | Hours: 17h  
|  | Theory classes: 3h  
|  | Practical classes: 3h  
|  | Laboratory classes: 1h  
|  | Guided activities: 0h  
|  | Self study: 10h |

**Specific objectives:**
1, 2, 3, 4, 5

| Development of topic 3 | Hours: 33h  
|  | Theory classes: 8h  
|  | Practical classes: 6h  
|  | Laboratory classes: 1h  
|  | Guided activities: 0h  
|  | Self study: 18h |

**Specific objectives:**
1, 2, 3, 4, 5

| Development of topic 4 | Hours: 17h  
|  | Theory classes: 3h  
|  | Practical classes: 3h  
|  | Laboratory classes: 1h  
|  | Guided activities: 0h  
|  | Self study: 10h |

**Specific objectives:**
1, 2, 3, 4, 5
## Development of topic 5

**Specific objectives:**
1, 2, 3, 4, 5, 6  

**Hours:** 32h  
Theory classes: 8h  
Practical classes: 6h  
Laboratory classes: 1h  
Guided activities: 0h  
Self study: 17h

## Development of topic 6

**Specific objectives:**
1, 2, 3, 4, 5, 6  

**Hours:** 20h  
Theory classes: 4h  
Practical classes: 3h  
Laboratory classes: 1h  
Guided activities: 2h  
Self study: 10h

## Development of topic 7

**Specific objectives:**
1, 2, 3, 4, 5, 6  

**Hours:** 33h 30m  
Theory classes: 8h 30m  
Practical classes: 6h  
Laboratory classes: 1h 30m  
Guided activities: 0h  
Self study: 17h 30m

## Final exam

**Description:**
Final exam  

**Specific objectives:**
1, 2, 3, 4, 6  

**Hours:** 8h  
Guided activities: 3h  
Self study: 5h

## Partial exam

**Hours:** 6h 30m  
Guided activities: 1h 30m  
Self study: 5h
The assessment of the subject will consist of the marks: P, F, L
The mark P will be obtained from the partial exam.
The mark F will be obtained from the final exam.
The mark L will be obtained by an examination at the computer classroom where the resolution of exercises using python will be evaluated.
The final mark will be computed as follows:

Note = maximum (60% F + 30% P + 10% L, F)

The re-evaluation grade will be the mark of the revaluation exam.
