Degree competences to which the subject contributes

Specific:
1. Knowledge, use and application of automation and control methods applicable to the ship and offshore installations.

Learning objectives of the subject

The main objective is to provide the concept of a dynamic system, applicable in practically all fields of engineering, and the signal as a variable of this system. Other objectives include:

· Introduction to the basic concepts and tools of system analysis.
· Design of controllers to improve the performance specifications of the systems.
· Presentation of control systems within the naval field.

At the end of the course the student must be able to perform the analysis and modification of the systems behavior in navigation technology.

**Description:**
Impulse and step responses of first and second order systems. Stationary error of feedback systems.

**Related activities:**
(ENG)

**Specific objectives:**
(ENG)
## System stability

**Learning time:** 9h 15m  
Theory classes: 2h  
Practical classes: 2h  
Self study: 5h 15m

**Description:**  

**Related activities:**  
(ENG)

**Specific objectives:**  
(ENG)

## Design of PID controllers

**Learning time:** 22h 15m  
Theory classes: 2h  
Practical classes: 3h 30m  
Laboratory classes: 4h  
Guided activities: 6h  
Self study: 6h 45m

**Description:**  

**Related activities:**  
Lab 1: Introduction and control system of the angular velocity of a DC motor. In this session the student has to:  
1) Understand the system and the function of the different blocks of the plant;  
2) Identify the model of the plant;  
3) Evaluate the performance of different control systems in open and closed loop; and  
4) Understand the effect of the different actions of proportional, integral and derivative controls.

Lab 2: Control system for the angular position of a DC motor. In this session the student has to:  
1) Evaluate the performance of different systems in open and closed loop; and  
2) Design a PID controller.

**Specific objectives:**  
(ENG)
The final mark is the partial sum of the following qualifications:

\[ \text{Nfinal} = 0.45 \text{ Npf} + 0.4 \text{ Nac} + 0.15 \text{ Nel} \]

**Nfinal**: Final result  
**Npf**: Final exam qualification  
**Nac**: Continuous evaluation  
**Nel**: Laboratory qualification

The final exam consists of questions on concepts associated with the learning objectives of the course, and a set of practice exercises. Continuous evaluation is the result of a partial test (with a weight of 20% of the final mark) and activities conducted during the year.

**Reexamination**: According to the rules of the FNB, a reexamination test consisting of a comprehensive review of the subject will be performed. This test reassessment is aimed to students with a final mark ranging between 3.0 and 4.9.
Regulations for carrying out activities

- Students who do not submit the final test, or have not done any of the labs, or have not submitted any test of the continuous evaluation will be denoted as "NOT TAKEN".
