The main objective of the course is to explore the learning process of each student in order to identify and expose their main expertizes and professional interests. The main task of the course is to learn how to use digital and design tools to be able to adequately develop and communicate the following:

1) The portfolio as process (digital), including all the material that identifies the learning acquired from the first term to the end of the degree.
2) The portfolio as showcase (digital and printed), presenting the main skills and strengths by showing a selection of the best results and high-level work developed throughout the degree.

Both portfolios should be structured by means of a written reflection on the individual criteria and interests of each student, text that will also be object of appreciation by the assessment committee of the TFG.
