Degree competences to which the subject contributes

Specific:
CEMT-22. Knowledge and application of materials technology in the production, transformation, processing, selection, control, maintenance, recycling and storage of all types of materials.

Transversal:
07 AAT N2. SELF-DIRECTED LEARNING - Level 2: Completing set tasks based on the guidelines set by lecturers. Devoting the time needed to complete each task, including personal contributions and expanding on the recommended information sources.

Learning objectives of the subject

Get to Know analytical techniques and characterization of the surface.
Gaining basic knowledge of surface modification techniques.
Learning to select surface modification techniques based on applications.

**Description:**
- 1.1. Surface engineering goals
- 1.2. Surface description
- 1.3. Surface phenomena: corrosión, wear and fatigue

**Specific objectives:**
Describe the surface phenomena that limit the useful life of materials and understand the ways that engineering surfaces offers to control and reduce their effects.

<td>Self study: 11h</td>
</tr>
</tbody>
</table>

**Description:**
- 2.1. Microscopy techniques
- 2.2. Spectroscopy techniques
- 2.3. Measurements and tests

**Specific objectives:**
Describe the surface characterization techniques at different scales to determine: microstructure, chemical composition and mechanical properties.

**Description:**
- 3.1 Degreasing processes
- 3.2 Removal of organic deposits
- 3.3 Removal of protective layers
- 3.4 Removal of corrosión and oxidation products

**Specific objectives:**
To understand the importance of cleaning processes prior to surface modification. Establish a criterion to select the appropriate cleaning process depending on the initial state of the surface and/or further treatment and/or application.
(ENG) Chapter 4. Surface modification without changing the material chemically

**Description:**
4.1. Thermal treatments: Quenching and annealing
4.2. Mechanical treatments: Shot peening

**Related activities:**
Presentation of case studies

**Specific objectives:**
1. Understand basic theory of these processes
2. Describe the stages on which these processes are carried out at industrial level
3. Understand their effect on the surface regarding microstructure and mechanical properties
4. Know under which work conditions these processes are useful

(ENG) Chapter 5. Surface modification by altering surface chemistry

**Description:**
5.1. Carburization
5.2. Nitration
5.3. Passivation
5.4. Phosphatation
5.5. Ionic implantation

**Related activities:**
Presentation of case studies

**Specific objectives:**
1. Understand basic theory of these processes
2. Describe the stages on which these processes are carried out at industrial level
3. Understand their effect on the surface regarding microstructure and mechanical properties
4. Know under which work conditions these processes are useful

Understand their effect on the surface regarding microstructure and mechanical properties  
Know under which work conditions these processes are useful
(ENG) Chapter 8. Surface modification by adding a new material onto the surface (coating): Organic coatings

**Description:**
- 8.1. Technology and functions
- 8.2. Types and selection criteria
- 8.3. Application processes
- 8.4. Photological processes

**Related activities:**
Presentation of case studies

**Specific objectives:**
- Understand basic theory of these processes
- Describe the stages on which these processes are carried out at industrial level
- Understand their effect on the surface regarding microstructure and mechanical properties
- Know under which work conditions these processes are useful

**Learning time:** 16h
- Theory classes: 6h
- Self study: 10h

Chapter 9. Nanotechnology in surfaces

**Description:**
content english

**Specific objectives:**
- Understand basic theory of these processes
- Describe the stages on which these processes are carried out at industrial level
- Understand their effect on the surface regarding microstructure and mechanical properties
- Know under which work conditions these processes are useful

**Learning time:** 7h
- Theory classes: 2h
- Self study: 5h
