300251 - IC-MP2 - Communications Installations

Coordinating unit: 300 - EETAC - Castelldefels School of Telecommunications and Aerospace Engineering
Teaching unit: 744 - ENTEL - Department of Network Engineering
Academic year: 2018
Degree: BACHELOR’S DEGREE IN AEROSPACE SYSTEMS ENGINEERING (Syllabus 2015). (Teaching unit Optional)
BACHELOR’S DEGREE IN AEROSPACE SYSTEMS ENGINEERING/BACHELOR’S DEGREE IN TELECOMMUNICATIONS SYSTEMS ENGINEERING (Syllabus 2015). (Teaching unit Optional)
BACHELOR’S DEGREE IN AEROSPACE SYSTEMS ENGINEERING/BACHELOR’S DEGREE IN NETWORK ENGINEERING (Syllabus 2015). (Teaching unit Optional)
ECTS credits: 7,5
Teaching languages: Spanish

Teaching staff
Coordinator: Definit a la infoweb de l’assignatura.
Others: Definit a la infoweb de l’assignatura.

Prior skills
Understand the fundamentals of telecommunications
Knowing the basis of computers

Requirements
Computer 2

Degree competences to which the subject contributes

Specific:
1. CE 23 AEROP. Conocimiento aplicado de: edificación; electricidad; electrotécnia; electrónica; mecánica del vuelo; hidráulica; instalaciones aeroportuarias; ciencia y tecnología de los materiales; teoría de estructuras; mantenimiento y explotación de aeropuertos; transporte aéreo, cartografía, topografía, geotecnia y meteorología. (CIN/308/2009, BOE 18.2.2009)

Transversal:
2. SELF-DIRECTED LEARNING - Level 1. Completing set tasks within established deadlines. Working with recommended information sources according to the guidelines set by lecturers.
3. EFFICIENT ORAL AND WRITTEN COMMUNICATION - Level 1. Planning oral communication, answering questions properly and writing straightforward texts that are spelt correctly and are grammatically coherent.
4. TEAMWORK - Level 1. Working in a team and making positive contributions once the aims and group and individual responsibilities have been defined. Reaching joint decisions on the strategy to be followed.
5. EFFECTIVE USE OF INFORMATION RESOURCES - Level 1. Identifying information needs. Using collections, premises and services that are available for designing and executing simple searches that are suited to the topic.

Teaching methodology
The first two topics will be taught with blackboard and transparencies classes by the teacher and the realization of problems and exercises for students in groups and then conduct the teacher.
The two latest content will be taught so that students have a more active, more justified because they are practical engineering content, making two-project work in groups of 4 students.
### Learning objectives of the subject

At the end of assignatura Instal.lacions de teleconferencing, the student should be able to:

- Determine, based on the concepts learned in class components for communications networks and services and communication facilities.
- Explain the meaning of the most important concepts of network and telecommunication services, from local area networks and fieldbuses.
- Define the most important parameters of communication networks, the fieldbus and control facilities.
- Identify the most appropriate technical solutions to project a communications facility and a communications installation.
- Use the concepts and tools to specify, plan and manage a communications facility and control facilities.

### Study load

**Related activities:**
## Planning of activities

### EXAMINATION OF THEORY AND PROBLEMS.

**Hours:** 1h  
Practical classes: 1h

**Description:**  
Performing a control at the end of the first topic

**Support materials:**  
Students have their notes and lecture slides, problems and proposed class before examining

**Descriptions of the assignments due and their relation to the assessment:**  
The written exercise given by the student.

**Specific objectives:**  
From exercise delivered by the student should be able to confirm that:  
The student has effectively followed the lectures and problems and has made and seized the hours of autonomous learning.  
He has learned well and knows the fundamentals, seen in lectures and problems, the evaluation period.  
He is able to connect and integrate concepts, techniques and technologies explained.  
He has a clear idea of "the orders of magnitude of the parameters of telematic networks and services.  
The student knows and accurately estimate roughly as appropriate values "of variables and parameters.

### PRESENTATION OF TWO PAPERS-PROJECTS

**Hours:** 4h  
Practical classes: 4h

**Description:**  
Each working group consists of four students, they will present the work done on the issues 3, 4 and 5. They should expose all students and then answer questions from peers and teacher. The quality and interest of the students' questions are also evaluated

**Support materials:**  
Especially the work done in the hours of practice dedicated to that purpose.

**Descriptions of the assignments due and their relation to the assessment:**  
The working-memory project format transparencies technical project and exhibition.

**Specific objectives:**  
Learning to summarize, explain and convince about a project. Learn to prepare a presentation.

### GUIDED VISITS TO COMMUNICATIONS FACILITIES

**Hours:** 4h  
Practical classes: 4h

**Description:**  
Visits accompanied by teacher to communication facilities of the UPC and / or airport.

**Support materials:**  
Maps and background information.

**Descriptions of the assignments due and their relation to the assessment:**  
Brief report of what they learned in the visit

**Specific objectives:**  
Meet real communication facilities. Identify the different elements that compose them and their values and parameters.
PROBLEM ASSIGNMENTS

<table>
<thead>
<tr>
<th>Description:</th>
<th>Hours: 4h</th>
</tr>
</thead>
<tbody>
<tr>
<td>Problem assignment to the student in order to be solved autonomously</td>
<td>Self study: 4h</td>
</tr>
</tbody>
</table>

Support materials:
Problem statements provided by the professors

Qualification system

Regulations for carrying out activities
Assistance to activities directed and assessments are mandatory
