### Degree competences to which the subject contributes

#### Specific:

1. FB-3 Ability to apply the systems of spatial representation, the development of the sketch, the proportionality, the language and the techniques of the graphical representation of the constructive elements and processes.
2. FE-1 Ability to understand and make the graphical documentation of a project, to do data gathering, surveying of plans and geometric control of construction units.
3. FE-2 Knowledge of the infographic and cartographic procedures and methods in the construction field.
4. FE-4 Knowledge of the materials and traditional or prefabricated construction systems used in construction, their varieties and physical and mechanical features which define them.
5. FE-7 Ability to identify the constructive elements and systems, define its function and compatibility, and its implementation to construction in the construction process. Plan and solve constructive details.
6. FE-14 Aptitude to apply the specific regulations about facilities in the construction process.
7. FE-27 Ability to apply the necessary advanced tools for the resolution of the parts which the technical project implies and its management.
8. FE-28 Aptitude to write technical projects of constructions, which don’t require architectural projects, as well as projects of demolition and design.
9. FE-33 Exposition and defence, before a university committee, of a final of degree project, consisting in an exercise of assimilation of the educational contents received and the competences acquired.

#### Transversal:

10. SELF-DIRECTED LEARNING. Detecting gaps in one's knowledge and overcoming them through critical self-appraisal. Choosing the best path for broadening one's knowledge.
11. EFFICIENT ORAL AND WRITTEN COMMUNICATION. Communicating verbally and in writing about learning outcomes, thought-building and decision-making. Taking part in debates about issues related to the own field of specialization.
310087 - Introduction to the Interior Project

12. TEAMWORK - Level 2. Contributing to the consolidation of a team by planning targets and working efficiently to favor communication, task assignment and cohesion.

Teaching methodology

The students will develop during the course a public presentation of an interior design construction chosen by them between some determined options, the groups will have a maximum of three members. Analyzing all the theoretical aspects of the project.

Other resources:
Communication with the professors by ATENEA and mail. Advertisements and information in the exterior cabinet of the corresponding office.

Audiovisual material:
Presentation of the theoretical classes at class by projector and presentations with Power Point or similar.

Computer material:
The theoretical topics will be uploaded in the intranet of the school (ATENEA), as well as any wording in PDF. The communication with the students will be also with ATENEA and its inner mail.

Learning objectives of the subject

At the end of the subject, the students should be able to:
- Determine: the important elements to organize at the time to project.
- To have an organization system at the time to project an space.
- Relate: the different spaces to achieve an interior comfort.
- Define graphically the chosen solution.
- Understand projects of other professionals.
- To be able of analyze any project to do it with critical ability.

### Content

#### C1 Unit 1 Historic referents

<table>
<thead>
<tr>
<th>Description:</th>
<th>Learning time: 5h</th>
</tr>
</thead>
<tbody>
<tr>
<td>In this content the student will acquire historical knowledge of the architecture, specifically of the XIX and XX centuries and the architects which have worked about the interior space and the corresponding furniture design, know partially the different styles and materials used through the history, starting from the XV century. Architectural models. Brief history of the architecture. The interior distributions through the history.</td>
<td>Theory classes: 3h</td>
</tr>
<tr>
<td></td>
<td>Practical classes: 1h</td>
</tr>
<tr>
<td></td>
<td>Self study : 1h</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>

</table>
## C3 Unit 3 The interior space.

### Description:
- Order principles.
- Zoning.
- Circulation.
- Functionality.
- Communication.
- Surface.
- The form.
- Scales.
- Proportion.
- Equilibrium.
- Rhythm.

### Related activities:
There will be done some questionnaires or exercises about the teaching material which at the same time will be useful to understand deeply the topic.
At the same time the students will start to prepare the project to analyze.

### Learning time:
- Theory classes: 3h
- Practical classes: 1h
- Self study: 7h

## C4 Unit 4 Illumination

### Description:
Theory about the way to light the interior spaces, disposition of the light points, plugs and switches.

### Related activities:
There will be done a little exercise related with the illumination.

### Specific objectives:
Design the light according to the purpose of each interior space.
### C5 Unit 5 Colour

**Description:**
Theory of the color. Use of color in the spaces depending on the existing natural and artificial light. Combination of colors.

**Related activities:**
Color practice, related with the space worked.

**Specific objectives:**
Define the interior colors according to the purpose and use of the projected space.

**Learning time:** 11h  
Theory classes: 3h  
Practical classes: 1h  
Self study: 7h

### C6 Unit 6 Materials

**Description:**
Revision of the materials in the interior space: ceilings, floors, empty spaces. Classification of the materials and its execution in construction.

**Related activities:**
There will be done a brief exercise of the search of interior materials.

**Specific objectives:**
Know the world of the light materials, its construction processes and the most suitable search of them.

**Learning time:** 11h  
Theory classes: 3h  
Practical classes: 1h  
Self study: 7h
C7 Unit 7 External determinant, legality

<table>
<thead>
<tr>
<th>Learning time: 21h</th>
</tr>
</thead>
<tbody>
<tr>
<td>Theory classes: 4h 30m</td>
</tr>
<tr>
<td>Practical classes: 1h 30m</td>
</tr>
<tr>
<td>Self study: 15h</td>
</tr>
</tbody>
</table>

Description:
In this section there will be done theoretical classes related with the construction licenses and administration as well as the way of making a technical report and the representation of project details.

Legal and administrative aspects in the making of an interior project.
Necessary plans.
The association. Endorsements.
Paperwork: Licenses, regulations.
Writing of reports.

Related activities:
There will be done some questionnaires or exercises about the teaching material and at the same time it will be useful to understand the topic deeply.
At the same time the students will start to prepare the project to analyze.

Specific objectives:
Know the existing regulations related with the small constructions, at the same time the students will know the association.

Planning of activities

A1 GROUP TESTS OF CONTINUOUS EVALUATION . EXPOSITION IN CLASS

| Hours: 2h |
| Theory classes: 1h |
| Self study: 1h |

Description:
The students will expose in groups of two and three members an interior design project which they will have chosen (previously consulted with the tutor) at class. Approximate time 20 minutes for group.

Support materials:
Any audiovisual or graphic material esteemed for the explanation.
Power Point, video, blackboard, mockups...

Descriptions of the assignments due and their relation to the assessment:
The students will deliver a CD with the work explained at class and a summary paper.
This work has a value of the 90% of the final mark.

Specific objectives:
Achieve to know the authors of the most outstanding interior projects.
Be able to analyze a project made by other professional.
Graphical analysis ability.
Improvement of the technical language at the time of explain a project.
Group cooperation.
There will be done a public presentation of the work in group. The group work will be presented at class explaining it with the audiovisual help which the students consider. It will have a worth of 70% of the final mark. The 30% remaining will be the addition of the valuation of the exercises done at class. It is compulsory the minimum attendance to classes of 80% of the total course.

**Qualification system**

**Regulations for carrying out activities**

- It is a necessary condition to have corrected many times the final project to value the aptitude of the student.
- The tests realised at class have numerical valuation.
- The public exposition of the group work will be done during the three last weeks of the four-month term according to the educational calendar.
