Course guide
310628 - 310628 - Surveying in Civil Engineering

Unit in charge: Barcelona School of Building Construction
Teaching unit: 751 - DECA - Department of Civil and Environmental Engineering.
Degree: BACHELOR'S DEGREE IN GEOINFORMATION AND GEOMATICS ENGINEERING (Syllabus 2016).
(Compulsory subject).

Academic year: 2022  ECTS Credits: 6.0  Languages: Spanish

LECTURER

Coordinating lecturer: Amparo Rubio Cerdá

Others:

PRIOR SKILLS

Have taken the subjects of "Topographic instruments and methods" and "Design, observation and adjustment of networks"

DEGREE COMPETENCES TO WHICH THE SUBJECT CONtributes

Specific:
5. (ENG) Planificació, projecte, direcció, execució i gestió de processos de mesura, sistemes d'informació, explotació d'imatges, posicionament i navegació; modelització, representació i visualització de la informació territorial en, sota i sobre la superfície terrestre.
4. (ENG) Comprendre i analitzar els problemes de implantació en el terreny de les infraestructures, construccions i edificacions projectades des de l'enginyeria en topografia, analitzar els mateixos i procedir a la seva implantació.
7. Knowledge about security, health and labour risks inside the scope of this engineering and its application and development.
6. Knowledge about application of the geomatic methods and techniques in the the scope of the different enginneries.

Transversal:
1. SELF-DIRECTED LEARNING - Level 2: Completing set tasks based on the guidelines set by lecturers. Devoting the time needed to complete each task, including personal contributions and expanding on the recommended information sources.
2. SUSTAINABILITY AND SOCIAL COMMITMENT - Level 2. Applying sustainability criteria and professional codes of conduct in the design and assessment of technological solutions.
3. EFFECTIVE USE OF INFORMATION RESOURCES - Level 2. Designing and executing a good strategy for advanced searches using specialized information resources, once the various parts of an academic document have been identified and bibliographical references provided. Choosing suitable information based on its relevance and quality.

TEACHING METHODOLOGY

Subject based in the practice on class.
In this examples it is searched the most possible aproximation to the reality.
The work is done in small groups.
The attendance is mandatory in order to acquire the established competences.
LEARNING OBJECTIVES OF THE SUBJECT

- Definition of geometry, in planimetry and altimetry, of projects about linear sketches and infrastructures.
- Application of the topography in the different specialties of engineering. The surveying and metric control in projects of architecture and engineering.
- Measurements and cubage techniques,
- Safety, health and labour risks in the professional environment of geomatics.

STUDY LOAD

<table>
<thead>
<tr>
<th>Type</th>
<th>Hours</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hours large group</td>
<td>24,0</td>
<td>16.00</td>
</tr>
<tr>
<td>Hours medium group</td>
<td>36,0</td>
<td>24.00</td>
</tr>
<tr>
<td>Self study</td>
<td>90,0</td>
<td>60.00</td>
</tr>
</tbody>
</table>

Total learning time: 150 h

CONTENTS

Surveying concept
Description:

- Full-or-part-time: 1h
  Theory classes: 1h

Geometric fittings
Description:

- Full-or-part-time: 21h
  Theory classes: 1h
  Practical classes: 7h
  Self study: 13h

Surveying methods
Description:
Surveying methods for polars, by intersection and by horizontals and verticals

Related activities:
Field practice

Full-or-part-time: 7h
  Theory classes: 1h
  Laboratory classes: 2h
  Self study: 4h
**Alineation definition in floor plan**

**Description:**
Straights, circles and transition alignments.

**Related activities:**
Practices in class
Field practices

**Full-or-part-time:** 33h
Theory classes: 3h
Practical classes: 8h
Laboratory classes: 2h
Self study: 20h

**Alineation definitions in elevation**

**Description:**
Vertical deals. Intersections and fitting.
Longitudinal profiles

**Related activities:**
Practices in class

**Full-or-part-time:** 10h
Theory classes: 2h
Practical classes: 2h
Self study: 6h

**Definition of the transverse section**

**Description:**
Transverse profiles.
Type section. Elements and conditionings.
Regulation aspects.
The relation with the floor plant and elevation longitudinals

**Related activities:**
Practices in class

**Full-or-part-time:** 50h
Theory classes: 3h
Practical classes: 17h
Self study: 30h
Measurements and cubage

Description:
Measurement of longitudinal elements.
Measurements of surfaces and volumes.
Regulation aspects.

Related activities:
Practices in class

Full-or-part-time: 28h
Theory classes: 2h
Practical classes: 9h
Self study: 17h

GRADING SYSTEM

Continuous evaluation by small theoretical tests.
Practical exams that have a great importance in the final mark.
Valoration of the deliveries.
The attendance is valorated in the final mark.
