### Degree competences to which the subject contributes

#### Specific:

1. IND\_BASIC: Understand the basic concepts behind the general laws of mechanics, thermodynamics, fields and waves, and electromagnetism and understand how they apply to problems encountered in engineering.

#### Transversal:

2. SELF-DIRECTED LEARNING - Level 1. Completing set tasks within established deadlines. Working with recommended information sources according to the guidelines set by lecturers.
3. EFFICIENT ORAL AND WRITTEN COMMUNICATION - Level 1. Planning oral communication, answering questions properly and writing straightforward texts that are spelt correctly and are grammatically coherent.
4. TEAMWORK - Level 1. Working in a team and making positive contributions once the aims and group and individual responsibilities have been defined. Reaching joint decisions on the strategy to be followed.

### Teaching methodology

- Face-to-face lecture sessions
  - Lectures are given using digital presentations. The presentations will be made available to students on the virtual campus before classes begin to help them follow them. The assessment will be based on mid-semester examinations (or an optional final examination for students who fail the first one).
  - Face-to-face practical work sessions
- During practical work sessions, students work individually or in small groups of 2-3 on problems and questions under the lecturer's supervision. A collection of problems will be made available on the virtual campus. Systems for self-assessment (with assessment criteria or rubrics), co-assessment (among students) and delivery of reports, corrected by the teacher and returned, are made available to facilitate independent learning.
- Face-to-face laboratory work sessions
- Students work in pairs during laboratory sessions. Guidelines for practicals will be made available to students on the virtual campus at the start of the course. Students must hand in a report for each practical. Marks will be based on the work carried out in the laboratory and the reports handed in.

- Retrieval of unsatisfactory results: failed grade for midterm exams with a percentage higher than 25% of the global qualification could be recovered. The final exam cannot be recovered. The grade obtained by the application of the retrieval will replace the initial grade as long as it is higher. Recovery will be carried out included in the final exam or in a specific recovery exam in class hours.
- Reevaluation for failed students who have obtained at least 3.5 on the final grade of the examinations. The maximum grade that can be obtained by reevaluation is 5.

### Regulations for carrying out activities

To pass the subject, students must complete the laboratory practicals and hand in the necessary reports.
