320007 - CTM - Materials Science and Technology

Coordinating unit: 205 - ESEIAAT - Terrassa School of Industrial, Aerospace and Audiovisual Engineering
Teaching unit: 702 - CMEM - Department of Materials Science and Metallurgy
Academic year: 2017
Degree: BACHELOR'S DEGREE IN MECHANICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN CHEMICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN INDUSTRIAL DESIGN AND PRODUCT DEVELOPMENT ENGINEERING (Syllabus 2010). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN INDUSTRIAL ELECTRONICS AND AUTOMATIC CONTROL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN ELECTRICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN TEXTILE TECHNOLOGY AND DESIGN ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
ECTS credits: 6
Teaching languages: Spanish

Teaching staff
Coordinator: DAVID ARENÇÓN OSUNA
Others: MARCELO DE SOUSA PAIS ANTUNES
VERA CRISTINA DE REDONDO REALINHO

Degree competences to which the subject contributes

Specific:
1. IND_COMMON: Knowledge of the science principles, technology and materials. Understanding the relation between the microstructure, synthesis or processing and properties of these materials.

Transversal:
3. EFFICIENT ORAL AND WRITTEN COMMUNICATION - Level 1. Planning oral communication, answering questions properly and writing straightforward texts that are spelt correctly and are grammatically coherent.
2. SELF-DIRECTED LEARNING - Level 1. Completing set tasks within established deadlines. Working with recommended information sources according to the guidelines set by lecturers.
4. EFFECTIVE USE OF INFORMATION RESOURCES - Level 1. Identifying information needs. Using collections, premises and services that are available for designing and executing simple searches that are suited to the topic.
320007 - CTM - Materials Science and Technology

**Teaching methodology**

- **Face-to-face lecture sessions**
Lectures are given using digital presentations. The presentations will be made available to students on the virtual campus before classes begin to help them follow them. The assessment will be based on mid-semester examinations (or an optional final examination for students who fail the first one).

- **Face-to-face practical work sessions**
During practical work sessions, students work individually or in small groups of 2-3 on problems and questions under the lecturer’s supervision. A collection of problems will be made available on the virtual campus. Systems for self-assessment (with assessment criteria or rubrics), co-assessment (among students) and delivery of reports, corrected by the teacher and returned, are made available to facilitate independent learning.

- **Face-to-face laboratory work sessions**
Students work in pairs during laboratory sessions. Guidelines for practicals will be made available to students on the virtual campus at the start of the course. Students must hand in a report for each practical. Marks will be based on the work carried out in the laboratory and the reports handed in.

**Learning objectives of the subject**

On completion of the course, students should be able to:
- Correctly use and interpret the language and basic concepts of Chemistry.
- Recognise the structure of matter and relate it to the physical and chemical properties of organic and inorganic substances.
- Apply stoichiometric calculations to solve problems.
- Recognise the equipment and apply the basic techniques of the chemistry laboratory.

**Description:**
- Stress and deformation
- Isotropy/anisotropy
- Elasticity and plasticity
- Young’s modulus, Poisson’s ratio, elastic limit, maximum strength, rupture deformation, resilience, toughness
- Plastic deformation mechanisms in metals
- Metal hardening
- Creep
- Fracture
- Fatigue

**Related activities:**
Activities 1, 2, 3, 4 and 5.

<table>
<thead>
<tr>

**Description:**
- Definition of phase. Gibb’s rule of phases
- Solid solutions
- Analysis rules for binary phase diagrams
- Binary phase diagrams: type I, II, III, IV
- Invariant transformations: eutectic, eutectoid, peritectic

**Related activities:**
Activities 1, 2, 3, 4 and 5.
### TOPIC 6: METAL ALLOYS

**Learning time:** 17h  
Theory classes: 5h  
Practical classes: 2h  
Self study: 10h

**Description:**
- Ferric alloys: steel and cast iron  
- Non-equilibrium microstructures in ferric alloys. Main thermal treatments  
- Non-ferric alloys  
- Processing technologies of metallic alloys

**Related activities:**
Activities 1, 2, 3, 4 and 5.

### TOPIC 7: CERAMICS AND GLASS

**Learning time:** 15h 40m  
Theory classes: 5h  
Practical classes: 1h  
Self study: 9h 40m

**Description:**
- Main characteristics of glasses, traditional ceramics and high demanding ceramics  
- Structure of glasses, traditional ceramics and high demanding ceramics  
- Processing technologies of glasses, traditional ceramics and high demanding ceramics

**Related activities:**
Activities 1, 2, 3, 4 and 5.

### TOPIC 8: PLASTIC MATERIALS

**Learning time:** 16h  
Theory classes: 5h  
Practical classes: 1h  
Self study: 10h

**Description:**
- Polymerization processes  
- Average molecular mass of polymers  
- Branching, isomeria and copolimerization  
- Plastics: thermoplastic, thermosetting, elastomer  
- Polymers: amorphous and semicrystalline  
- Processing technology of thermoplastic polymers

**Related activities:**
Activities 1, 2, 3, 4 and 5.
TOPIC 9: COMPOSITE MATERIALS

Learning time: 14h 50m
- Theory classes: 5h
- Practical classes: 1h
- Self study: 8h 50m

Description:
- Matrix and reinforcement
- Matrix classification of composites: polymeric, metallic, ceramic
- Reinforcement classification of composites: particulate, fiber, structural
- Predictive models of some physical properties
- Processing technology of composite materials

Related activities:
- Activities 1, 2, 3, 4 and 5.

Planning of activities

ACTIVITY 1: THEORETICAL CLASSES

Hours: 69h
- Theory classes: 24h
- Self study: 45h

ACTIVITY 2: PRACTICAL CLASSES

Hours: 37h 30m
- Practical classes: 15h
- Self study: 22h 30m

ACTIVITY 3: LAB SESSIONS

Hours: 37h 30m
- Laboratory classes: 15h
- Self study: 22h 30m

ACTIVITY 4: PARTIAL EXAM

Hours: 3h
- Theory classes: 3h

ACTIVITY 5: 2nd MIDSEASON EXAM

Hours: 3h
- Theory classes: 3h
Qualification system

- First examination (NP1): 42.5%
- Second examination (NP2): 42.5%
- Laboratory sessions (NLB): 15%

La nota global s'obté de la següent expressió:

Global grade = 0.425 NP1 + 0.425 NP2 + 0.15 NPL

The students may in second term exam (june) have a final exam (NFIN) of all the subject content. This exam contain the topics of first term (NPR1) and topics of second term (NP2). If NPR1 is lower than NP1, NP1 grade will remain for the global grade. For these students, the global grade comes from the following expression:

Global grade = 0.425 NPR1 + 0.425NP2 + 0.15 NPL

Reevaluation conditions
a) having a grade "FAIL" in the subject
b) having a minimum average grade of 3,50, resulting from average marks of NP1 and NP2
c) having obtained a minimum grade of 5,0 in laboratory sessions

Máximo grade through reevaluation: 5,0.

Regulations for carrying out activities

It is compulsory to attend the laboratory practical sessions. The assessment of NPL marks will be exposed through virtual campus Atenea at the beginning of the semester.
