3200212 - ME2 - Electrical Machines II

Coordinating unit: 205 - ESEIAAT - Terrassa School of Industrial, Aerospace and Audiovisual Engineering
Teaching unit: 709 - EE - Department of Electrical Engineering
Academic year: 2018
Degree: BACHELOR'S DEGREE IN ELECTRICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
ECTS credits: 6
Teaching languages: Catalan, Spanish

Teaching staff

Coordinator: Luis Martínez Barrios
Others: Ricard Horta Bernús

Prior skills

Students will be expected to have passed Physics, Electrical Systems, Electrical Machines I since the knowledge acquired in those subjects is the foundation on which an understanding of Electrical Machines II will be built.

Degree competences to which the subject contributes

Specific:

1. ELE: Ability to calculate and design electrical machines.

Teaching methodology

In the lecture sessions, the lecturer presents the subject content. He/she covers the various concepts, explains what documentation will be used and assigns work.
In the face-to-face applied sessions, groups of three students present the results of their completed assignments. The lecturer decides which students will participate in each of these sessions.
Independent learning enables students to gain an understanding of each of the concepts covered by the lecturer. This type of learning also includes the completion of assignments.
Group work, done in three-person teams, includes preparation for practicals and the writing of post-practical reports.

Learning objectives of the subject

This subject introduces students to the operation, construction, application and selection principles of electric machines (both static and rotating), as well as the design of basic parts that are common to all such machines. Students will learn to use the parameters that govern the various types of machines and interpret their characteristic curves. They will use commercial catalogues and rated quantities to determine the performance of different machines and select the most appropriate one. They will also learn to interpret and use graphic methods, recommended by international standards, for construction, use and start-up tests.
Students will learn to solve problems related to the behaviour of electric machines (generators, transformers and engines) both analytically and graphically, paying special attention to the order of magnitude and the units used in industry. They will use construction plans and diagrams to better understand the operation and configuration of the various circuits (magnetic, electric, dialectic, etc.) and their topology.
### Study load

**Description:**
- 1.01. Asynchronous (induction) motors.
- 1.02. Moment of a motor.
- 1.03. Equivalent circuit of asynchronous motors.
- 1.04. Circle diagram.
- 1.05. Start-up of asynchronous motors.
- 1.06. Speed regulation.
- 1.07. Single-phase motors.
- 1.08. Special motors.
- 1.09. Additional topics.

**Related activities:**
- Three sessions.
  - Testing of single-phase asynchronous motors to obtain their characteristic parameters and equivalent circuit.
  - Testing of three-phase asynchronous motors to obtain their characteristic parameters and equivalent circuit.
  - Start-up of three-phase asynchronous motors: direct, autotransformer, static star-delta.

<table>
<thead>
<tr>
<th>TOPIC 4: DIRECT-CURRENT MACHINES</th>
<th>Learning time: 21h</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Theory classes: 12h</td>
</tr>
<tr>
<td></td>
<td>Practical classes: 4h</td>
</tr>
<tr>
<td></td>
<td>Laboratory classes: 4h</td>
</tr>
<tr>
<td></td>
<td>Guided activities: 1h</td>
</tr>
</tbody>
</table>

**Description:**
- 2.01. Construction and principles of direct-current machines.
- 2.02. Armature reaction and commutation.
- 2.03. Direct-current motors.
- 2.04. Additional topics.

**Laboratory sessions**
- Two sessions.
  - Testing of direct-current motors and generators to obtain their characteristic parameters and equivalent circuit.
Qualification system

First Exam (Theory) - 25%
First Exam (Lab) - 15%
Second Exam (Theory) - 25%
Second Exam (Lab) - 20%
Work in Laboratory - 15%

For those students who meet the requirements and submit to the reevaluation examination, the grade of the reevaluation exam will replace the grades of all the on-site written evaluation acts (tests, midterm and final exams) and the grades obtained during the course for lab practices, works, projects and presentations will be kept.

If the final grade after reevaluation is lower than 5.0, it will replace the initial one only if it is higher. If the final grade after reevaluation is greater or equal to 5.0, the final grade of the subject will be pass 5.0.

Regulations for carrying out activities

Non-attendance to the laboratory classes is an NP in the assessment items related to the contents taught in these sessions
