Learning objectives of the subject

340033 - FOAU-F4007 - Fundamentals of Automatic Control

1. To understand the concept of linear dynamic system invariant in time and its representation through its transfer function.
2. To be able to model some mechanical and electrical systems using the formalism of the transfer functions.
3. To determine the characteristics that may hold the responses to first and second order systems where standard inputs (impulse, step or ramp) are applied.
4. To understand the advantages of closed loop system.
5. To be able to represent by Bode and Nyquist diagrams frequency responses of first and second order systems, as well as higher order systems.
6. To know how to interpret frequency diagrams.
7. To learn to select in some cases the best controller to reach the given specifications relating to stability, steady-state error and characteristics of the stationary response.
8. To Be able to simulate the behavior of linear systems using MATLAB and Simulink.

Qualification system

partial exams: E1 and E2
 Laboratory controls: P1 and P2
 oral presentation: 0

final grade:
 $\max(0.65 \cdot T + 0.25 \cdot P + 0.1 \cdot O, 0.7 \cdot T + 0.3 \cdot P)$, where:
 $T = \max(E2, (E1 + E2)/2)$ and $P = (0.5 \cdot P1 + 0.5 \cdot P2)$

Re-assesment is possible if final grade ≥ 3

In this case,
 final grade = $\min(5, \max(0.65 \cdot TR + 0.25 \cdot P + 0.1 \cdot O, 0.7 \cdot TR + 0.3 \cdot P))$, where:
 $TR = \max(R, (E1 + R)/2)$
