### Teaching staff

**Coordinator:** FRANCISCO JAVIER RUIZ VEGAS

**Others:**
- FRANCISCO JAVIER RUIZ VEGAS
- CRISTÓBAL RAYA GINER
- XAVIER LLANAS PARRA
- ALBERT SAMÀ MONSONÍS
- RAMON GUZMAN SOLA
- ANDREU CATALA MALLOFRE
- LUIS MIGUEL MUÑOZ MORGADO

### Prior skills

Prerequisites: basic Calculus and Algebra course, with complex numbers and a basic course on Physics.

### Degree competences to which the subject contributes

**Specific:**

**Transversal:**

1. EFFICIENT ORAL AND WRITTEN COMMUNICATION - Level 1. Planning oral communication, answering questions properly and writing straightforward texts that are spelt correctly and are grammatically coherent.
2. TEAMWORK - Level 1. Working in a team and making positive contributions once the aims and group and individual responsibilities have been defined. Reaching joint decisions on the strategy to be followed.

### Teaching methodology

Theoretical classes, practical classes and laboratory.

### Learning objectives of the subject

The learning objectives of the subject are to provide students with a comprehensive understanding of the principles and techniques of automatic control. The course aims to equip students with the knowledge and skills necessary to design, analyze, and implement control systems in various engineering applications. Students will learn about system modeling, feedback control, stability analysis, and advanced control techniques. The course also emphasizes practical skills through laboratory experiments and project work.
1. To understand the concept of linear dynamic system invariant in time and its representation through its transfer function.
2. To be able to model some mechanical and electrical systems using the formalism of the transfer functions.
3. To determine the characteristics that may hold the responses to first and second order systems where standard inputs (impulse, step or ramp) are applied.
4. To understand the advantages of closed loop system.
5. To be able to represent by Bode and Nyquist diagrams frequency responses of first and second order systems, as well as higher order systems.
6. To know how to interpret frequency diagrams.
7. To learn to select in some cases the best controller to reach the given specifications relating to stability, steady-state error and characteristics of the stationary response.
8. To be able to simulate the behavior of linear systems using MATLAB and Simulink.

340033 - FOAU-F4007 - Fundamentals of Automatic Control

Unit 5: Frequency response analysis
Learning time: 20h
Theory classes: 2h
Practical classes: 2h
Laboratory classes: 4h
Self study: 12h

Unit 6: Stability analysis using frequency response
Learning time: 20h
Theory classes: 2h
Practical classes: 2h
Laboratory classes: 4h
Self study: 12h

Unit 7: Control systems design
Learning time: 20h
Theory classes: 2h
Practical classes: 2h
Laboratory classes: 4h
Self study: 12h

Qualification system

Partial exams: E1 and E2
Laboratory controls: P1 and P2
Oral presentation: O

Final grade:
max(0.65·T+0.25·P+0.1·O, 0.7·T+0.3·P), where:
T=max(E2, (E1+E2)/2) and P=(0.5·P1+0.5·P2)

Re-assessment is possible if final grade>=3
In this case,
final grade=min(5, max(0.65·TR+0.25·P+0.1·O, 0.7·TR+0.3·P)), where:
TR=max(R, (E1+R)/2)
