Course guides
340128 - SIRO-K6O07 - Robotic Systems

Unit in charge: Vilanova i la Geltrú School of Engineering
Teaching unit: 707 - ESAII - Department of Automatic Control.

Degree: BACHELOR'S DEGREE IN ELECTRICAL ENGINEERING (Syllabus 2009). (Optional subject).
BACHELOR'S DEGREE IN INDUSTRIAL ELECTRONICS AND AUTOMATIC CONTROL ENGINEERING (Syllabus 2009). (Compulsory subject).
BACHELOR'S DEGREE IN MECHANICAL ENGINEERING (Syllabus 2009). (Optional subject).

Academic year: 2021 ECTS Credits: 6.0 Languages: Catalan, Spanish, English

LECTURER

Coordinating lecturer: Luis Miguel Muñoz
Others: Luis Miguel Muñoz

PRIOR SKILLS

Skills in industrial automation, process control and programming.

REQUIREMENTS

must previous passed
Q5 Industrial Automation; Industrial Informatics

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
2. CE15. Basic knowledge of production and fabrication systems.
3. CE29. Ability to design automotion control systems.

Transversal:
1. EFFECTIVE USE OF INFORMATION RESOURCES - Level 3. Planning and using the information necessary for an academic assignment (a final thesis, for example) based on a critical appraisal of the information resources used.
4. TEAMWORK - Level 3. Managing and making work groups effective. Resolving possible conflicts, valuing working with others, assessing the effectiveness of a team and presenting the final results.

TEACHING METHODOLOGY

Master classes, active learning and participative expositive classes, projects and problems based learning, and study of real cases.

LEARNING OBJECTIVES OF THE SUBJECT

Identify and analyze the elements of a robot, their specifications and terminology.
Describe and analyze the models of a robot.
Describe the robot control techniques.
Know the robot programming techniques.
Know the criteria, methodology and standards about the implantation of robots, evaluating their integration capability in a social or industrial environment.
STUDY LOAD

<table>
<thead>
<tr>
<th>Type</th>
<th>Hours</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Self study</td>
<td>90.0</td>
<td>60.00</td>
</tr>
<tr>
<td>Hours large group</td>
<td>30.0</td>
<td>20.00</td>
</tr>
<tr>
<td>Hours small group</td>
<td>30.0</td>
<td>20.00</td>
</tr>
</tbody>
</table>

Total learning time: 150 h

CONTENTS

(ENG) 1 Background

Description:
- Definition
- Classification
- Brief history
- Robots morphology
- Joints
- Industrial applications

Specific objectives:
Locate the robot in the industrial domain and pay attention to collaborative tasks with humans. Know the different parts that the robot is composed.

Related activities:
PR1

Full-or-part-time: 6h
Theory classes: 6h

(ENG) -2 Geometrics, Kinematics and dynamics

Description:
- Position and orientation representation
- Kinematic modeling
- Dynamic modeling

Specific objectives:
Learn geometry, kinematics, and dynamic aspects to understand the robot control movements of the next chapter.

Related activities:
PR2

Full-or-part-time: 18h
Theory classes: 18h
### (ENG) -3 Control and robots programming

**Description:**
- Control architectures
- Control based in dynamic model
- Adapative control
- Effort control
- Path generation
- Gestural and Textrual programming

**Specific objectives:**
Learn some aspects of dynamic control and programming in order to prepare robotic tasks

**Related activities:**
PR1, PR2, PR3

**Full-or-part-time:** 6h
Theory classes: 6h

### (ENG) -4 Mobile Robotics

**Description:**
Introduction to mobile robotics

**Specific objectives:**
Know the science of the wheeled mobile robots

**Related activities:**
PR4

**Full-or-part-time:** 4h
Theory classes: 4h

### (ENG) PR1 Industrial robots programming

**Description:**
- Introduction to programming robot system
- Programming tools
- Edition and programming
- Examples
- Portfolio

**Specific objectives:**
Learn the basic instructions for the programming of robotic tasks

**Full-or-part-time:** 4h
Theory classes: 4h
### (ENG) PR2 Robots: Modeling and simulation

**Description:**
- Introduction to the robotics toolbox Matlab
- Study of the Spacial transformations
- Study of the kinematic model

**Specific objectives:**
- Learn to use the mathematic tools in order to analyze the science behind robots

**Full-or-part-time:** 8h  
Theory classes: 8h

---

### (ENG) PR3 Programming robots tools

**Description:**
- Introduction to programming and simulations robots
- Programming a robotized task
- Programming a robotized system

**Specific objectives:**
- Know advanced tools for program and simulate industrial robots

**Full-or-part-time:** 2h  
Theory classes: 2h

---

### (ENG) PR4 Mobile robots

**Description:**
- Programming wheeled mobile robots

**Specific objectives:**
- Learn to solve mobile robot tasks using the acquired theoretical knowledge

**Full-or-part-time:** 2h  
Theory classes: 2h

---

### PR5 Miniproject

**Description:**
- Conducting a group project

**Full-or-part-time:** 10h  
Theory classes: 10h

---

### GRADING SYSTEM

- Individual tests in the middle of the course (60%)
- Team work (40%)
- Presentations in group about a theme or project related to robotics
- Laboratory Practicum and activities proposed during the course
- Re-evaluation of the individual part
- Re-evaluation may be accessed in accordance with school regulations
