370520 - ADAPTACIO - Ophthalmic Optics, Workshop and Dispensing

Coordinating unit: 370 - FOOT - Terrassa School of Optics and Optometry
Teaching unit: 731 - OO - Department of Optics and Optometry
Academic year: 2019
Degree: BACHELOR’S DEGREE IN OPTICS AND OPTOMETRY (Syllabus 2009). (Teaching unit Compulsory)
ECTS credits: 9  Teaching languages: Catalan

Teaching staff
Coordinator: MARTA FRANSOY BEL (http://futur.upc.edu/MartaFransoyBel)
Others: JOAN ANTONI MARTÍNEZ RODA

Opening hours
Timetable: The attention to the student will be done by means of previous appointment, that it is necessary to request through the intranet of the subject.

Degree competences to which the subject contributes

Specific:
1. Acquire skills in patient care
2. Apply the techniques and develop the necessary skills to proceed to the assembly and repair of all types of glasses (prescription, protective, or optical aid), and their adaptation and adjustment to the user.
3. Evaluate, assess the causes and solve the cases of maladjustment of the user of glasses or optical aids
4. Understand the different functions that can have glasses: compensation of ametropias, eye protection to general and labour use, low vision aids.
5. Establish criteria of balance between the aesthetic and functional aspects of the compensating element (glasses and visual aids).
6. Do the control of quality of the glasses or optical aids made once the assembly.
7. Do the following-up of the treatment and value the satisfaction of the user.
8. Making use of machinery, instruments and tools needed to make assembly, adjustments, repairs and quality control of finished product.
9. Individualize treatment planning.
10. Interpret refractive test results to determine the suitable optical prescription.
11. To interpret the results and determine if necessary a treatment.
12. Recognize the characteristics of different population groups according to the age, or demands or visual needs.
13. Recognize if the glasses meet the standards refered to in ophthalmic optics, optical aids and eye protection.
14. Select the appropriate optical aid according to the patient’s visual limitations.
15. Being able to take, treat, represent and interpret experimental data. "Use basic laboratory equipment and
At the end of the course the student must be able to:

- Know the processes of design, manufacture and selection of ophthalmic lenses and glasses frames.

- Use the techniques of analysis, measurement, correction and control of optical compensating systems on the visual system, in order to optimize their design and adaptation.

- Evaluate the impact of the aberrations of ophthalmic lenses that compensate for ametropies in the vision of the user of glasses.
- Evaluate the monocular and binocular effects of ophthalmic lenses.

- Know the properties and differential characteristics of the eye protection glasses.

- Calculate the most relevant geometrical, optical and physical parameters that characterize all types of ophthalmic lens used in optometric prescriptions and know how to relate them to the properties that intervene in the adaptation process.

- Carry out the patient / user care protocol to the consultation / optometric clinic to adapt the glasses.

- Prescribe, monitor and monitor the glasses as a treatment of ametropy compensation after the complete optometric examination.

- Select the appropriate frames and lenses according to the specific needs and characteristics of each user.

- Use the techniques of centering, adaptation, assembly and manipulation specific for all types of optometric prescription glasses and protection goggles.

- Carry out the delivery of the glasses to the user, giving the precise instructions and doing the necessary anatomical adjustment operations.

- Become familiar with the commercialization of the products, their storage, conservation and the information that must be offered to the user.

- Apply the knowledge acquired in the previous modules, in Optical, Clinics and Hospitals, Health Centers and Sector Companies.

### (ENG) 3. LENS SELECTION

**Description:**
- The minimum lens diameter, and different ways to calculate it.
- The implications of refraction of the patient in the choice of material and geometry of the lens.
- The conditions of use of glasses and convenience of surface treatments on the lenses.
- Calculation and analysis of the distribution of thicknesses beveled lenses.

**Learning time:** 18h
- Theory classes: 6h
- Laboratory classes: 2h
- Self study: 10h

### (ENG) 5. MONOFOCAL LENS PRESCRIPTION

**Description:**
In this topic, several sections are developed:
- Monocular effects of monofocal lenses: visual field change, variation in image size, the effect of the vertex distance effect of pantoscopic and facial tilt on the power of lenses.
- Binocular effects of lenses: Magnification of lenses, induced aniseikonia, iconic lenses design, induced binocular imbalances, centering lenses according to the main use relationship.
- The effects of high power prescriptions: implications of netting with glasses in aphakia conditions, high hyperopia and high myopia, differential criteria selection of frames and lenses, and control conditions.
- The fitting, adjustment and adaptation of single vision prescriptions glasses.

**Learning time:** 34h
- Theory classes: 8h
- Laboratory classes: 12h
- Self study: 14h

### (ENG) 6. PRISMATIC LENS PRESCRIPTION

**Description:**
This subject is developed in four sections:
- Requirements to produce a prismatic prescription in both, astigmatic and spherical lenses.
- The impact of prismatic centering errors.
- Induction of decentered prisms for special cases.
- User information of perceptual changes associated.
- The analysis and solution of the problems of maladjustment.
- The installation, adjustment and adaptation of glasses with prismatic prescriptions.

**Learning time:** 26h
- Theory classes: 6h
- Laboratory classes: 6h
- Self study: 14h
7. PRESCRIPTIONS WITH MULTIFOCAL LENSES

**Description:**
The content of this topic is divided in five sections:
- The need for bifocal prescription and presbyopia compensation systems available.
- Centering techniques and control prismatic bifocal prescriptions.
- Information to the user for the proper use of prescription.
- The analysis and solution of the problems of maladjustment.
- The fitting, adjustment and adaptation of glasses with prescription bifocals.

---

7. PRESCRIPTIONS WITH OCUPATIONAL LENSES

**Description:**
In this subject, three main sections are developed:
- The need for multifocal prescription and optical systems available.
- Centering techniques and adaptation of multifocal prescriptions.
- Information to the user the proper use of prescription.

---

9. OCULAR PROTECTION PRESCRIPTIONS

**Description:**
This topic is developed in several sections:
- The need for eye protection against radiation and other external agents.
- The areas of eye protection and current regulations.
- Protection systems available according to the main use and user need.
- Requirements, specifications and classification of protective eyewear.
- The performance of the optometrist in the selection and adaptation of the eye protector.
- The analysis and solution of special cases.
Overall qualification will be the result of a face-to-face, written and individual test, scores obtained in laboratory and workshops, completion of portfolio, activities proposed in the classroom, and the actual case of adaptation, with the following weighting:

- 20% Midterm exam
- 30% Final exam
- 10% Actual case of glasses fitting
- 30% Workshop and dispensing Lab
- 10% AIMU Portfolio

Information on the subject assessment activities will be detailed in the intranet (Atena digital campus)

**Regulations for carrying out activities**

All submissions must match the guidelines published on the intranet (Atena digital campus). On the contrary, it won't be assessed.

**Bibliography**

**Basic:**

**Complementary:**

- Catàlegs comercials de lents oftalmiques i muntures, i publicacions internes d'empreses del sector.
