Teaching methodology

The teaching methodology combines different learning tools addressed to facilitate the student?s comprehension of the content of this topic as well as to enhance their ability to apply the learned knowledge of day-to-day case studies. On one hand, there will be a series of theoretical concepts that the Professor will transmit in traditional lectures, combined with practical exercises aimed at the application of the acquired knowledge. Practical exercise will cover a wide range of activities from the review of scientific papers, public defense of small case studies and resolution of economic problems. In all cases, the teaching methodology will use learning cooperative tools to facilitate student?s participation. Finally, in all cases, lectures would benefit from the use of upgraded ICT tools.

Learning objectives of the subject

At the end of the course, students should be able to understand the concept of Agro-food Markets and the complexity of the existing interrelationships among market agents (from farm to fork), as well as the role of the public sector. Furthermore, students should be able to critical use the economic models (understood as a simple representation of
reality), and to be aware about their limitations. In the same context, students should be able to explain the current situation of a specific food sector taking into account also its growing globalization. Finally, students should be able to economically value agricultural assets: trees, agricultural land, agricultural holdings, future harvests and machinery.
