 Degree competences to which the subject contributes

Specific:
1. Biochemistry: Microbiology and microbial metabolism.

Learning objectives of the subject

Students must acquire knowledge related to general and metabolic characteristics of microorganisms. Besides, they must know classify microorganisms into categories according to their specific metabolic characteristics and assess its ecological role, its geochemistry function and its usefulness in industrial processes. At the end of the course, the student must demonstrate an overview of the importance of microorganisms in the production of industrial products and in environmental sustainability.

# 390212 - MMM - Microbiology and Microbial Metabolism

## Content

### GENERAL MICROBIOLOGY

**Learning time:** 50h
- **Theory classes:** 12h
- **Laboratory classes:** 10h
- **Self study:** 28h

**Description:**
- Introduction to Microbiology. Classification and main characteristics of the microorganisms.
- Environmental effects on microbial growth: nutrients, temperature, pH, osmotic pressure, and oxygen effects.

**Related activities:**
- Activity 1. Theory classes
- Activity 2. Individual assessment test
- Activity 3. Laboratory work

### METABOLIC DIVERSITY

**Learning time:** 50h
- **Theory classes:** 14h
- **Laboratory classes:** 10h
- **Self study:** 26h

**Description:**
- Metabolism: anabolic and catabolic reactions. Obtention of the energy and the precursors metabolites.
- System phototrophic life: pigment functions and applications. Importance of anoxygenic and oxygenic photosynthesis.

**Related activities:**
- Activity 1. Theory classes
- Activity 2. Individual assessment test
- Activity 3. Laboratory work
### APPLICATION OF METABOLIC DIVERSITY

**Description:**
- Selection of microorganisms and the improved of the strains (industrial microbiology, food industry, environmental microbiology, pharmaceuticals etc.)
- Use of microbial metabolic activity: starter used, biochemistry and application technology

**Related activities:**
- Activity 1. Theory classes
- Activity 2. Individual assessment test
- Activity 3. Laboratory work

### Qualification system

The final qualification, Nfinal, is the sum of the partial marks:

- N1: 1st mid-term exam
- N2: 2nd mid-term exam
- N3: mark of lab

\[
N_{final} = 0.4 \times N_1 + 0.4 \times N_2 + 0.2 \times N_3
\]

### Regulations for carrying out activities

Attendance at lab practices is mandatory. It must bring the material indicated in the script and to be on time to the practical sessions.
