Last update: 21-06-2019

390213 - GEO - Geomatics

Coordinating unit: 390 - ESAB - Barcelona School of Agricultural Engineering

Teaching unit: 745 - EAB - Department of Agri-Food Engineering and Biotechnology

Academic year: 2019

Degree: BACHELOR'S DEGREE IN BIOSYSTEMS ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN FOOD ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)

ECTS credits: 6 Teaching languages: Catalan

Teaching staff

Coordinator: LYDIA SERRANO PORTA

Others: RAFAEL VIDAL
JOSÉ M. YÚFERA

Teaching methodology

In the hours of directed learning the basic concepts of the subject will be exposed and practical problems will be solved using GIS software. Practices will be carried out on IP connectivity with a generic sensor platform designed ad-hoc for the subject.
The hours of autonomous learning will have to be devoted to carrying out evaluable practices, study of the syllabus, practical exercises and problems, tutorials, consultations in library and Internet and preparation of exams.

Learning objectives of the subject

At the end of the course, the student will have to know the foundations of the GIS (Geographic Information Systems), the basic GIS analysis tools and operations and identify their potential application in the field of biological systems. In addition, the student will have to know the basics and potential applications of remote sensing in the field of biological systems, and perform image analysis operations using specialized software.
Likewise, at the end of the course, students must know the general functioning as well as the benefits and limitations of the GPS. In addition, students should know the general functioning and the elements of an IP network, such as Internet, and thier basic configuration. In terms of their applications , the student must be able to compare the current wireless technologies at the level of benefits and know the concept of Internet of Things (IoT) as well as the elements and thecnologies associated to IoT.

Study load

Total learning time: 150h	Hours large group:	40h	26.67%
	Hours medium group:	0h	0.00%
	Hours small group:	20h	13.33%
	Guided activities:	0h	0.00%
	Self study:	90h	60.00%

390213 - GEO - Geomatics

Content

1. INTRODUCCIÓ A LA GEOMÀTICA

Learning time: 6h

Theory classes: 6h

Description:
Introduction
Fundamentals of cartography and geodesy.

Related activities:
Activity 1. Classes of theory and practical exercises
Activity 2. Final evaluation individual test

2. GEOGRAPHIC INFORMATION SYSTEMS

Learning time: 14h

Theory classes: 8h
Laboratory classes: 6h

Description:
Definition, components and applications
Vector and raster GIS analysis operations

Related activities:
Activitat 1. Classes teòriques
Activitat 2. Prova individual d'avaluació final
Activitat 3. Classes pràctiques de SIG i teledetecció

3. REMOTE SENSING

Learning time: 10h

Theory classes: 6h
Laboratory classes: 4h

Description:
Definition, components, types and applications
Physical fundamentals
Sensors and platforms
Digital image analysis

Related activities:
Activitat 1. Classes teòriques
Activitat 2. Prova individual d'avaluació final
Activitat 3. Classes pràctiques de SIG i teledetecció

390213 - GEO - Geomatics

4. Conceptes bàsics de sistemes de comunicacions

Learning time: 5h

Theory classes: 3h
Laboratory classes: 2h

Description:
Exemples d'aplicació
Concepte de sistema de comunicació: digital/analògic, transmissor, receptor, canal, velocitat de propagació i de transmissió, atenuació, xarxa.
Representació de dades: binari, ASCII, hexadecimal, resolució, signe, escala logarítmica (dB, dBm)
Unitats: Bit, byte, Hz

Related activities:
(ENG) Activitat 1. Classes teòriques
Activitat 2. Prova individual d'avaluació final
Activitat 4. Internet de les Coses: conceptes bàsics i aplicació

5. Sistemes de posicionament per satèl·lit

Learning time: 8h

Theory classes: 6h
Laboratory classes: 2h

Description:
Òrbites
Coordenades i posicionament
Portadora i modulació

Related activities:
Activitat 1. Classes teòriques
Activitat 2. Prova individual d'avaluació final
Activitat 4. Internet de les Coses: conceptes bàsics i aplicació

390213 - GEO - Geomatics

6. Xarxes sense fils	Learning time: 7h Theory classes: 5h Laboratory classes: 2h

Description:
Espectre i bandes de freqüències
Equació de Friis
Soroll e interferències
Tecnologies
Concepte d ' accés al medi

Related activities:
Activitat 1. Classes teòriques
Activitat 2. Prova individual d'avaluació final
Activitat 4. Internet de les Coses: conceptes bàsics i aplicació

7. Internet	Learning time: 10h Theory classes: 6h Laboratory classes: 4h

Description:
Model TCP/IP, concepte de protocol
Xarxes LAN: Ethernet, commutadors
IP, adreçament, routers
Capa de transport: protocols, port
Capa d ' aplicació: Web i DNS

Related activities:
Activitat 1. Classes teòriques
Activitat 2. Prova individual d'avaluació final
Activitat 4. Internet de les Coses: conceptes bàsics i aplicació
