On successfully completing the schedule of this course the student will learn:
- all about existing problems in the food industry because of generation of wastewater and waste and its management
- the technologies of treatment more important
- options of pollution valorization and minimization
- the environmental management tools applicable to the food industry to improve its environmental behaviour.

This knowledge should enable students to:
- propose measures organizational, operational and technology to minimize the amount and/or hazard of the waste generated in food industries.
- make sustainable decisions from the environmental point of view.

Learning objectives of the subject

Total learning time: 150h

## INTRODUCTION

**Learning time:** 2h 30m  
- Theory classes: 1h  
- Laboratory classes: 0h  
- Self study: 1h 30m

**Description:**  
Environmental problems of the food industry in the areas of waste and wastewater.

## WASTEWATER TREATMENT OF FOOD INDUSTRIES

**Learning time:** 80h  
- Theory classes: 20h  
- Laboratory classes: 12h  
- Self study: 48h

**Description:**  
Wastewater treatment of food industries: physical, chemical and biological processes.  
Intensive and extensive wastewater treatment systems.  
Treatment and management of sewage sludge of food industries.  
Sanitation normative aspects and water taxes.

## INDUSTRIAL WASTE MANAGEMENT

**Learning time:** 22h 30m  
- Theory classes: 5h  
- Laboratory classes: 4h  
- Self study: 13h 30m

**Description:**  
Characterization of the most significant residues of the food industry and associated problems.  
Valorization of organic waste from the food industry.  
Industrial waste management.

## POLLUTION MINIMIZATION

**Learning time:** 18h  
- Theory classes: 4h  
- Laboratory classes: 2h  
- Self study: 12h

**Description:**  
Cleaner production.  
Pollution prevention in food industries by sectors.
390227 - GAIA - Environmental Management of Food Industries

**ENVIRONMENTAL MANAGEMENT TOOLS**
