DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES
Specific:
CE-AL-30. Basic knowledge of general biochemistry and microbiology and of food biochemistry and microbiology.

TEACHING METHODOLOGY
The matter learning consists of lectures (large group) in which the teacher makes a speech to introduce the learning objectives related to the basic concepts of the subject. These sessions incorporate spaces for participation and involvement of students through questions and exposure of some technical-scientific topic published in the press, etc. The practices sessions in the biochemistry and microbiology labs allow develop basic skills through doing some of the more frequent analysis and evaluating the results obtained. The lab work aims to motivate and engage students to participate actively in the learning of the matter. From here, the students should be convinced of the need to do autonomous learning activities. Students have docent materials available through Athena of all scheduled activities.

LEARNING OBJECTIVES OF THE SUBJECT
The students must be able to know the main biomolecules, their structure and their function in living organisms and foods; and relate the molecular structure of these biomolecules with their physicochemical properties and knowledge of enzyme kinetics calculations. They also must be able to know the main microorganism groups in food and differentiate the three potential microorganism roles; in this way, they must differentiate between fermentation and transforming activity microorganisms from the disrupters and the ability to cause disease food.
