TEACHING METHODOLOGY

During the first part of the course, lectures will provide background information and the fundamentals of the subject (LCA).

Invited speakers will share their expertise on two specific topics: Carbon footprint and Water footprint.

Students will be organised in groups of 2-4 people for the coursework (LCA project).

The second part of the course will be focused on the coursework that each group will undertake with the software SimaPro (1 month license).

At the end of the course each group will present the LCA project to the rest, and hand in the LCA report.

Finally, a test will be used to ensure that knowledge on the subject has been successfully achieved.

LEARNING OBJECTIVES OF THE SUBJECT

- To describe the fundamentals of LCA, including its four main phases and LCA report content

- To carry out a LCA project by:
  o Compiling an inventory of relevant energy and material inputs and environmental releases
  o Evaluating the potential impacts associated with identified inputs and releases
  o Interpreting the results
  o Writing the LCA report according to ISO Standards

- To Identify the potential and limitations of LCA in practice

- To apply LCA results to support decision making
