Course guide
804226 - PROG1VJ - Programming I

Unit in charge: Image Processing and Multimedia Technology Centre
Teaching unit: 804 - CITM - Image Processing and Multimedia Technology Centre.
Degree: BACHELOR'S DEGREE IN VIDEO GAME DESIGN AND DEVELOPMENT (Syllabus 2014). (Compulsory subject).
Academic year: 2022  ECTS Credits: 6.0  Languages: Catalan, Spanish, English

LECTURER

Coordinating lecturer: Díaz Iriberri, Jose
Others: Martín Mínguez, Mónica

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
3. Use programming languages, algorithmic patterns, data structures, visual programming tools, game engines and libraries for the development and prototyping of video games, in any genre and for any platform and mobile device.

Generical:
1. Interpret the basics of the use and programming of computers, operating systems, databases and in general, computer programs with applications for engineering.
2. Interpret and master the basics of discrete mathematics, logic, algorithmics and computational complexity, and their application to the automatic processing of information using computer systems and their application for solving engineering problems.

Transversal:
4. EFFICIENT ORAL AND WRITTEN COMMUNICATION. Communicating verbally and in writing about learning outcomes, thought-building and decision-making. Taking part in debates about issues related to the own field of specialization.
5. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.

TEACHING METHODOLOGY

Lectures are divided in 2h sessions. During lectures, the teacher presents the theoretical concepts and explains them by means of examples that are solved in class. Some time is also dedicated to the resolution of exercises by the students with the assistance of the teacher (solve the doubts that may appear). An extensive use of campus virtual (Atenea) is mandatory, since the material of the course (slides, exercises, exams, etc.) and the communication between the students and the teacher are done through this system.

Tasks of the course: There are three types of tasks that are planned during the course:
- Two practical tests/exercises to evaluate specific topics of the course (P).
- A midterm exam that is done in the midterms week 7, specified in the academic calendar (EP).
- The final exam (EF).
LEARNING OBJECTIVES OF THE SUBJECT

Specific:
- Ability to understand and master the basic concepts of logic, algorithms and computational complexity, and its application for solving problems of engineering.
- Knowledge of the basics of using and coding software with applications in engineering.
- Using programming languages, patterns and data structures.

Transversal:
- EFFICIENT ORAL AND WRITTEN COMMUNICATION. Communicating verbally and in writing about learning outcomes, thought-building and decision-making. Taking part in debates about issues related to the own field of specialization.
- EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.

**Total learning time:** 150 h

CONTENTS

### 1. Basic concepts and algorithms

**Description:**
1.1. Definitions: Algorithm and Program.
1.3. Compiling and linking.
1.4. Execution.
1.5. C compiler. Features.
1.6. Examples of games programmed in C.
1.7. Introduction to Visual Studio.

**Related activities:**
Combine theoretical and practical activities.

**Full-or-part-time:** 11h
Theory classes: 4h 30m
Self study : 6h 30m
2. Types, operators and expressions

Description:
2.1. Variable Names
2.2. Data types and sizes
2.3. Constants
2.4. Declarations
2.5. Arithmetic operators
2.6. Relation and logical operators
2.7. Casting types
2.8. Increment and decrement operators
2.9. Assignment operators and expressions

Related activities:
Combine theoretical and practical activities.

Full-or-part-time: 10h
Theory classes: 4h
Self study: 6h

3. Control flow

Description:
3.1 Statements and blocks
3.2 If-else
3.3 Else-if
3.4 Switch
3.5 Loops-while and for
3.6 Loops-do-while
3.7 Break and continue

Related activities:
Combine theoretical and practical activities.

Full-or-part-time: 25h
Theory classes: 10h
Self study: 15h
### 4. Functions and program structure

**Description:**
- 4.1 Basics of Functions
- 4.2 Functions returning non-integers
- 4.3 External variables
- 4.4 Scope rules
- 4.5 Header files
- 4.6 Static variables
- 4.7 Register variables
- 4.8 Block structure
- 4.9 Initialization
- 4.10 The C preprocessor
- 4.11 Standard libraries

**Related activities:**
Combine theoretical and practical activities.

**Full-or-part-time:** 30h
- Theory classes: 12h
- Self study: 18h

### Midterm exam

**Description:**
Midterm Exam

**Full-or-part-time:** 2h
- Theory classes: 2h

### 5. Arrays

**Description:**
- 5.1 One-dimensional arrays
- 5.2 Multidimensional arrays
- 5.3 Traversals and searches

**Related activities:**
Combine theoretical and practical activities.

**Full-or-part-time:** 30h
- Theory classes: 12h
- Self study: 18h
6. Structures

**Description:**
6.1. Basic structures
6.2. Structures and functions
6.3. Arrays of structures
6.4 Typedef
6.5 Unions

**Related activities:**
Combine theoretical and practical activities.

**Full-or-part-time:** 25h
Theory classes: 10h
Self study : 15h

7. Files

**Description:**
7.1. Introduction
7.2. Read files
7.3. Write files

**Related activities:**
Combine theoretical and practical activities.

**Full-or-part-time:** 15h
Theory classes: 6h
Self study : 9h

**Final exam**

**Description:**
Examen teórico y práctico

**Full-or-part-time:** 2h
Theory classes: 2h

**GRADING SYSTEM**

The mark of the subject (NF) is computed as follows:
NF = 0.2 * EP + 0.4 * P + 0.3 * EF + 0.1*PAA

where EP is the mark of the midterm exam, P are the two tests of practical exercises that will be done throughout the course (note that the mark each one corresponds to the 20% of the final mark of the subject), EF is the mark of the final exam and PAA is Participation and learning attitude.

Students who do not pass the subject through continuous assessment will have the possibility of presenting themselves to the reassessment test. In this test the qualifications of the exams (EP and EF) will be reevaluated. The resulting final grade of subject can not exceed 5.
EXAMINATION RULES.

Different exercises will be proposed at each class that the students have to solve before the next class individually. The solution must be uploaded to the Virtual Campus before the deadline.
