804244 - RAVJ - Augmented Reality

Degree competences to which the subject contributes

Specific:
CEVJ 5. (ENG) Utilizar lenguajes de programación, patrones algorítmicos, estructuras de datos, herramientas visuales de programación, motores de juego y librerías para el desarrollo y prototipado de videojuegos, de cualquier género y para cualquier plataforma y dispositivo móvil.
CEVJ 6. (ENG) Analitzar, decidir i aplicar técnicas de programació gràfica, física, intel·ligència artificial, interacció, realitat augmentada i xarxes a un projecte de videojoc.

Transversal:
04 COE. EFFICIENT ORAL AND WRITTEN COMMUNICATION. Communicating verbally and in writing about learning outcomes, thought-building and decision-making. Taking part in debates about issues related to the own field of specialization.
CT4. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.
07 AAT. SELF-DIRECTED LEARNING. Detecting gaps in one's knowledge and overcoming them through critical self-appraisal. Choosing the best path for broadening one's knowledge.

Teaching methodology

The main topics and technologies to use are explained by the lecturer in order to allow the students to understand the state of the art of the different fields related to the subject, and to develop the practical projects proposed during the course. These projects will be developed in groups of two people during class, with the assistance of the lecturer, and autonomously by the students. Three projects are developed during the course and the obtained results must be presented at class. Sessions are expected to be as participative as possible, where students share the problems found during the resolution of activities and propose solutions/alternatives related to the topics and technologies used.

Learning objectives of the subject

- Acquire the knowledge on the state of the art and the possibilities that offer computer vision, computer graphics and virtual/augmented reality.
- Learn the different techniques to design and develop augmented reality applications.
- Learn the applications of augmented reality in the field of designing and developing video games.
- Be able to effectively combine the knowledge acquired throughout the course to develop augmented reality video games.

# Content

## Introduction

**Learning time:** 10h  
Practical classes: 10h

### Description:
Definition, evolution, applications and state of the art:  
1. Computer Vision  
2. Computer Graphics  
3. Virtual/Augmented Reality

## Computer vision: acquiring the real world

**Learning time:** 46h  
Practical classes: 8h  
Guided activities: 8h  
Self study: 30h

### Description:
1. Basic knowledge on computer vision  
2. Image acquisition  
3. Image processing  
4. Introduction to the hardware/software to use

### Related activities:
Project 1: image acquisition and processing

## Computer graphics: creation of the virtual world

**Learning time:** 46h  
Practical classes: 8h  
Guided activities: 8h  
Self study: 30h

### Description:
1. Basic knowledge on computer graphics  
2. Rendering of virtual elements  
3. Introduction to the software to use (WebGL - Shaders)

### Related activities:
Project 2: Rendering of virtual elements
### Augmented Reality: Interaction of Virtual Elements with the Real World

**Learning time:** 48h  
- Practical classes: 8h  
- Guided activities: 10h  
- Self study: 30h

**Description:**
1. Development of an AR video game  
2. Introduction of the software to use (Unity3D - Vuforia)

**Related activities:**
Project 3: augmented reality videogame

### Planning of Activities

| Project 1: Image Acquisition and Processing | Hours: 30h  
Guided activities: 30h |

Qualification system

3 projects:
Project 1st topic: 15% of the final mark.
Project 2nd topic: 15% of the final mark.
Project 3rd topic: 15% of the final mark.

2 exams:
Midterm exam: 15% of the final mark.
Final exam: 30% of the final mark.

Participation and learning attitude: 10% of the mark of the subject.
This part will be evaluated according to the participation of the student at class (solving exercises, proposing solutions/alternatives), the interest shown in learning the different topics and developing the projects, etc.

To pass the course, is mandatory to present in time all the projects stated before. The students who do not pass the course, will have the possibility to do a reevaluation exam (just the 45% corresponding to the exams is evaluated and 5 will be the maximum mark of the subject).

Regulations for carrying out activities

Part of the activities will be developed at class with the assistance of the lecturer. Students should also work autonomously to finish the activities proposed during the course.

Projects will be submitted via Campus Virtual following the guidelines provided by the instructions document of each one (name of the files, etc.). Projects submitted after midnight of the specified date will be considered as NP. Any issues that do not allow the student to submit a project in time should have a reasonable cause and must be communicated with enough anticipation to the lecturer. The evaluation of the projects does not consist just on submitting the code, but also on oral presentations when required.

Projects have to be executed at CITM, so be sure that you work with the same Unity3D version as the one provided at the center and that your projects can be executed there without errors.
