Degree competences to which the subject contributes

Specific:
- CEAAD 10. (ENG) Identificar el procés de direcció i producció dels diferents projectes artístics de l’àmbit digital, les metodologies existents, els rols implicats i les seves funcions.
- CEAAD 11. (ENG) Identificar el sector professional y los modelos de negocio de la industria audiovisual, así como las vías de financiación y las estrategias de distribución y marketing.

Learning objectives of the subject

- Show knowledge about the history of digital art, the different formats and the terms and expressions that are used in the industry, and ability to classify a piece of digital art based on its characteristics and use this knowledge in the design and creation of pieces of digital art.

- Show knowledge and application capacity in the digital creation of the following: the creation phases, the different professional profiles involved, the tasks carried out by each professional profile, as well as the technologies and software used in digital creation.

- Show understanding of the concept "digital art industry" and knowledge of the different agents involved and the chain of value and knowledge of the evolution and the current state of the industry, both nationally and internationally and their relationship with the evolution of technology.

- Take into account the social, economic and environmental dimensions when implementing solutions and carrying out projects consistent with human development and sustainability.

- Take initiatives that generate opportunities, new objects or new solutions, with a vision of process and market implementation, and involving and involving others in projects that must be developed.

- Systematically and critically analyze the global situation, addressing sustainability in an interdisciplinary way as well as sustainable human development, and recognize the social and environmental implications of professional activity in the same field.

- Apply sustainability criteria and professional codes of ethics in the design and evaluation of technological solutions. Use strategies for preparing and conducting oral presentations and writing texts and documents with consistent content,
structure and style, and good spelling and grammar.

- Communicate clearly and efficiently in oral and written presentations adapted to the type of audience and the objectives of the communication, using the appropriate strategies and means.

- Contribute to consolidate the team planning objectives, working effectively and favoring communication, distribution of tasks and cohesion.

- Direct and stimulate work groups, resolving possible conflicts, assessing the work done with other people and evaluating the effectiveness of the team as well as the presentation of the results generated.

- After identifying the different parts of an academic document and organizing the bibliographic references, designing and executing a good advanced search strategy with specialized information resources, selecting relevant information taking into account criteria of relevance and quality.

- Plan and use the information necessary for an academic work (for example, for the work of end of degree) from a critical reflection on the resources of information used.

- Carry out the tasks entrusted to them based on the basic orientations given by the teachers, deciding the time needed to be used for each task, including personal contributions and expanding the indicated sources of information.

- Apply the knowledge gained in the performance of a task in terms of relevance and importance, deciding how to carry it out and the time needed to dedicate it and selecting the most appropriate sources of information.

- Show sufficient reading comprehension in reading documents written in English, linked to the subject, such as notes, scientific articles, articles of popularization, web pages, etc.

### Technologies and software used in digital creation.

**Description:**
Digital creation involves a broad knowledge of many different computer tools, as well as a constant updating capacity:

- Technology as a tool and as a means
- Basic concepts in the treatment of digital files
- Core software in digital artistic creation
- Adaptability: autonomous learning and constant adoption of new technologies and software

**Learning time:** 25h  
Theory classes: 10h  
Self study: 15h

---

### The digital art industry: concept, agents involved and value chain.

**Description:**
Analysis of the digital art industry from a business perspective and business viability:

- Business models and business model canvas
- Public and private financing routes
- Feasibility studies and pivot capability
- Strategies of distribution according to platform and typology of art
- The market: study and analysis of competition
- Target definition and user's journey
- Marketing tools: from Facebook ads to guerrilla

**Related activities:**
SWOT analysis and market research

**Specific objectives:**
Identify and learn the fundamental concepts of the digital art business from a business perspective, studying the economic feasibility and potential market penetration of a hypothetical study of digital art from its creation.
### Evolution and situation of the digital art industry

**Description:**
Knowledge of the recent evolution of the industry and its acceleration. Study of emerging new technologies and their impact on digital artistic creation, in the creation of new formats and sophistication of "traditional" digital art.

Analysis of the perspectives in technology, culture and the digital arts in relation to:
- Democratization
- Globalization
- Interdisciplinarity

**Learning time:** 23h
- Theory classes: 8h
- Self study: 15h

### Cultural factors in the digital art industry

**Description:**
- Preservation and access to digital art
- Social interaction and virtual communities
- The public domain and the culture of property
- Cyberculture and digital capital
- Change through art and technology

**Learning time:** 19h
- Theory classes: 4h
- Self study: 15h

### Guest speakers

**Description:**
The course will also have 10 guest speakers, from diverse artistic fields and with diverse profiles, whom will offer master classes.
The final list of speakers and calendar of their respective sessions will be confirmed on the first day of class.

**Related activities:**
The attendance is obligatory. A part of the final exam will refer to the content of the presentations of the entire course.

**Specific objectives:**
Obtain a global and transversal vision of the digital art industry, acquiring information on production and realities of the market, through the direct testimony of professionals with many years of experience.

**Learning time:** 20h
- Theory classes: 20h
**Qualification system**

The evaluation of the subject will have the following tests (and their respective weighting on the final note of the student):

- Partial test type test - 25%
- 3 individual works (research, writing and analysis) - 30%
- Final theoretical exam (one part will be questions related to the guest lectures, the other about the contents of the subject) - 35%
- Participation in class and learning attitude - 10%

In case of not exceeding the subject in continuous evaluation, it will be possible to make the recovery of the final exam.

**Bibliography**

**Basic:**
