Course guide
804354 - NAVETR - Narratives for Real-Time

Last modified: 22/06/2023

Unit in charge: Image Processing and Multimedia Technology Centre
Teaching unit: 804 - CITM - Image Processing and Multimedia Technology Centre.

Degree:
- BACHELOR’S DEGREE IN MULTIMEDIA STUDIES (Syllabus 2009). (Optional subject).
- BACHELOR’S DEGREE IN VIDEO GAME DESIGN AND DEVELOPMENT (Syllabus 2014). (Optional subject).
- BACHELOR’S DEGREE IN DESIGN, ANIMATION AND DIGITAL ART (Syllabus 2017). (Optional subject).

Academic year: 2023  ECTS Credits: 6.0  Languages: Spanish

LECTURER

Coordinating lecturer: Marta Fernández
Others: Pedro Omedas

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
- CEAAD 9. Acquire the practical foundations of programming and apply them to tools or engines for the automation of tasks, prototyping and development of interactive audiovisual productions.
- CEAAD 8. Relate and apply the principles of audiovisual narrative and use the various associated techniques.
- CET 27. Be able to demonstrate the ability to create and modify 3D virtual environments for a multimedia application, using digital technologies.

Transversal:
- 05 TEQ. TEAMWORK. Being able to work as a team player, either as a member or as a leader. Contributing to projects pragmatically and responsibly, by reaching commitments in accordance to the resources that are available.
- 06 URI. EFFECTIVE USE OF INFORMATION RESOURCES. Managing the acquisition, structure, analysis and display of information from the own field of specialization. Taking a critical stance with regard to the results obtained.
- 07 AAT. SELF-DIRECTED LEARNING. Detecting gaps in one’s knowledge and overcoming them through critical self-appraisal. Choosing the best path for broadening one’s knowledge.

TEACHING METHODOLOGY

- Master class. The teacher delivers the content and describes the materials (work plan, notes, presentations, links, exercise statements, etc.) that will be used along the course or for the student’s autonomous work. In master classes students can participate, usually asking questions about the content taught by the teacher and taking notes.

- Laboratory practice. Students work on developing complex exercises or practices proposed by the teacher. This work is carried out during the classes and guided and supervised by the teacher.

- Case studies. The teacher presents both in oral and written format an example of a specific project, topic or practice related to the contents that are being taught in the course. The case studies describe the problem and provide data.

- Project-based learning. Students apply the knowledge learned in other courses and look for information, discuss with the teacher and acquire knowledge that can implement in the project. A part of this project development work takes place during classes. In this case the work is guided and supervised by the teacher. Another part is developed inside a team, during class hours or during autonomous work hours. Finally, another part is individual work for later sharing.

- Autonomous work. Students work independently, outside of class hours, studying, reading, solving exercises or problems, developing practices.
LEARNING OBJECTIVES OF THE SUBJECT

- Understanding of the elements of interactive storytelling in video games. Ability to apply these methods and techniques in the development of video games.

- Development of an interactive graphic application in real time for any medium, platform and device.

- Understanding and being able to explain how a game engine works.

- Reading comprehension when reading documents written in English and related to the course, such as notes, scientific articles, popular articles, web pages, etc.

- Clear and efficient communication in both oral and written presentations. Adapting the presentations to the type of audience and the communication goals using the appropriate strategies and means.

- Directing work groups, solving possible conflicts, evaluating the work done with other people and evaluating the effectiveness of the team as well as the presentation of the results generated.

Total learning time: 150 h

CONTENTS

Introduction to real-time storytelling

Description:
- Definitions of real-time interaction.
- Convergence between new media, industry 4.0 and traditional narrative: AI, 5G, XR, participatory culture, user-centered design, human-computer interaction, big data.
- Real-time storytelling fundamentals (the myth of the Holodeck, interactivity and immersion, properties of interactive digital environments).

Full-or-part-time: 19h
Practical classes: 2h
Guided activities: 2h
Self study: 15h

Interactive Storytelling

Description:
- Fictional worlds
- Non-linear and multiform stories
- Structured and emergent narrative
- Narrative design: world building, backstories, character profiles, dialogs, flowcharts

Full-or-part-time: 39h
Practical classes: 10h
Guided activities: 6h
Self study: 23h
Interactive Narrative and Emerging Technologies

Description:
- Storytelling and Industry 4.0
- Computational creativity
- XR: from narrativity to experientiality
- IA: Automatic generation of stories

Full-or-part-time: 29h
Practical classes: 8h
Guided activities: 6h
Self study: 15h

Virtual Production

Description:
- Machinima, digital puppets and real-time animation.
- Virtual production as a paradigm in the audiovisual production cycle (changes in the production pipeline, benefits compared to traditional audiovisual production, types of virtual production).
- Applications of virtual production (audiovisual fiction, performing arts, museums, interactive installations, digital twins, serious applications).

Full-or-part-time: 19h
Practical classes: 4h
Self study: 15h

Prototyping and Experience Testing of Interactive Narrative

Description:
Conceptualization and development of an application that simulates an interactive narrative experience.

Full-or-part-time: 44h
Practical classes: 22h
Self study: 22h

ACTIVITIES

Assignment 1

Description:
Group activity consisting of the conceptualization and narrative development of an interactive experience developed by means of a game engine.

Full-or-part-time: 15h
Practical classes: 10h
Self study: 5h
Assignment 2

Description:
Intermediate presentation of the project.
Delivery of the alpha version of a prototype implementing the designed narrative experience.

Full-or-part-time: 22h
Practical classes: 22h

Assignment 3

Description:
Delivery of the final interactive narrative prototype.

Full-or-part-time: 30h
Practical classes: 30h

Assignment 4

Description:
Research and state of the art around a topic related to real time narrative.

Full-or-part-time: 3h
Practical classes: 3h

GRADING SYSTEM

- Mid-term exam: 15%
- Assignment 1 (interactive project conceptualization and narrative development): 20%
- Assignment 2 (intermediate presentation of the project and alpha version of the prototype): 20%
- Assignment 4 (final presentation of the project and alpha version of the prototype): 25%
- Assignment 5 (state of the art on one of the aspects assessed in the course): 15%
- Attitude towards learning: 10%

Students' learning attitude will be evaluated by monitoring their interventions and activities developed during the class sessions.

EXAMINATION RULES.

- Once completed, the activities must be delivered to the Virtual Campus in the corresponding delivery and on the corresponding date.
- Students will dedicate autonomous work time (outside class hours) to carry out these activities.
- The evaluation of the activities does not only imply their resolution, but also the presentation of the results (when the student or the group is required to do so during the classes).
- The documents must be completed following the instructions given, especially with regard to the names of the files and the content structure. The correct management of the documentation provided is an aspect related to the skills to be acquired and is, therefore, subject to evaluation.
