Prior skills

This course requires no previous skills.

Requirements

This course has no prerequisites.

Degree competences to which the subject contributes

Specific:
2. Solve mathematical problems that may arise in engineering. Apply knowledge of linear algebra; geometry; differential geometry; differential and integral calculus; differential equations and partial differential equations; numerical methods; numerical algorithms; statistics and optimisation.

Transversal:
1. SELF-DIRECTED LEARNING - Level 1. Completing set tasks within established deadlines. Working with recommended information sources according to the guidelines set by lecturers.

Teaching methodology

The course uses the expositive methodology by 40% and individual work by 60%.

Learning objectives of the subject

General objectives: Students will learn the fundamental concepts of single variable calculus, developing the capacity of abstraction and applying these techniques to mathematical problems encountered in engineering.

Content

Sets of numbers

Description:
- The set of real numbers: Supreme axiom.

Related activities:
Lab session 1. Conics
Lab session 2. Complex numbers

Specific objectives:
The students will learn:
- the axiom of the supreme, key to understand the completeness of real numbers.
- to operate with complex numbers
- to establish relationships between binomial, polar and exponentials forms.

Functions of real variable. Limits and continuity.

Description:
- Continuity. Continuity theorems (Weierstrass, Bolzano, intermediate value theorem).

Related activities:
Lab Session 3. Limits and Continuity

Specific objectives:
Students will learn:
- to represent a real-valued function
- to understand the importance of the concept of limit and its relationship to continuity.
Differentiation of real valued functions

Description:
-The mean value theorems (Rolle, Cauchy, Lagrange).
-Extrema of a function in an interval.

Related activities:
Lab session 6. Taylor Polynomial

Specific objectives:
The student will learn:
-the basic concepts of derivative.
-to understand the geometric interpretation of the derivative and its applications in engineering.
-to master and to apply the elementary properties of the differentiable functions.
-to master the calculation of derivatives, both analytically and with the help of mathematical software.
-to model and solve various problems by calculating derivatives, optimization, approximating functions and study of functions.

Integration of functions of real variable

Description:
-Antiderivatives.
-Integration methods: direct methods, change of variable, integration by parts, trigonometric integrals.
-Calculation of areas of plane regions. Applications.
-Improper integrals.

Related activities:
Lab session 6. Integration
Lab session 7. Lab session exam (10%)

Specific objectives:
Students will learn:
-to express in terms of integrals the problem of calculation the area of a plane region.
-to understand the relationship between derivatives and integrals, given by the fundamental theorem of calculus.
-to use the Barrow’s rule.
-to calculate some improper integrals of continuous functions on an unbounded interval.

Linear algebra  
Learning time: 15h
- Theory classes: 2h
- Practical classes: 0h
- Laboratory classes: 4h
- Self study: 9h

Description:
Systems of linear equations. Gaussian elimination.
Inverse matrix.
Linear geometry: equation of a straight line and a plane;
orthogonality and parallelism; distances.

Related activities:
Lab Session 4. Matrices
Lab Session 5. Generic competence assessment

Specific objectives:
Students will learn:
- to solve systems of linear equations and
- to graphically represent the solution of a system of linear equations

Qualification system
First partial exam: 30%
Second partial exam: 50%
Laboratory: 10%
Generic competence (self-directed learning): 10%

The evaluation will be conducted through the assessment by the teacher.

The students can pass the course only by the assessment during the course from two partial exams (first partial exam within the course weeks; the second partial exam will be scheduled in the official final examination period), laboratory and the evaluation of generic competence.

An individual test will be performed in the assessment of the laboratory, during the last laboratory session.

Competence assessment: This course assesses the self-directed learning competency through individual tests during the development of one of the laboratory sessions. More precisely, the test will assess conics.

Finally, as detailed in the academic normative of the EEBE, a reevaluation exam will take place (excluding the Maple Laboratory exam and the Generic Competence). To be able to do the reevaluation exam, the student has to fail and has to attend to all the evaluation exams of the subject and its mark, N, for the part which can be reevaluated has to be such that N > 3.0 (https://eebe.upc.edu/ca/estudis/normatives-academiques/documents/eebe-normativa-avaluacio-i-permanencia-18-19-aprovat-je-2018-06-13.pdf).
Regulations for carrying out activities

No writing paper, books, papers, manuscripts or notes of any kind are to be taken into an examination room. The use of calculators, cell phones, tablets or any electronic device is not permitted in examinations.
