820011 - CTM - Materials Science and Technology

Coordinating unit: 295 - EEBE - Barcelona East School of Engineering
Teaching unit: 702 - CMEM - Department of Materials Science and Metallurgy
Academic year: 2017
Degree: BACHELOR'S DEGREE IN ELECTRICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN MECHANICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN CHEMICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN BIOMEDICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN ENERGY ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN INDUSTRIAL ELECTRONICS AND AUTOMATIC CONTROL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN BIOMEDICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN ELECTRICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN ENERGY ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN INDUSTRIAL ELECTRONICS AND AUTOMATIC CONTROL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN MECHANICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN CHEMICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)

ECTS credits: 6
Teaching languages: Catalan, Spanish

Teaching staff

Coordinator: José Antonio Benito Páramo
Others: José Antonio Benito Páramo
        Victor García Fernández
        Jordi Jorba Peiró
        Jordi Llumà Fuentes
        Joan Solà Saracibar
        Salvador Domingo
        Casas Quesada, Casimir
        Romero Pedret, Xavier Andres
        Torres Garrido, Diego Alejandro
        Velasco Ayguasanosa, Arnau
        Valle Chiro, Jorge

Opening hours

Timetable: See ftp://ftp-urgell.upc.es/materials/inici.htm or Atenea, as indicated by the docent.

Prior skills

Basic chemistry, particularly atomic theory, electronic structure and electrochemistry.
Logarithmic and exponential functions.
Trigonometric functions.
Derivatives, integrals and basic calculations.
Office automation software (spreadsheets and word processors).

Degree competences to which the subject contributes

Specific:
2. Understand the fundamentals of materials science, technology and chemistry. Understand the relationship between the microstructure, synthesis or processing and the properties of materials.

**Transversal:**

1. SELF-DIRECTED LEARNING - Level 1. Completing set tasks within established deadlines. Working with recommended information sources according to the guidelines set by lecturers.

**Teaching methodology**

The course is divided up as follows:
- 20% face-to-face expository classes (theory)
- 10% face-to-face directed classes (problem solving)
- 10% practical work (laboratory)
- 57% self-directed learning (study)
- 3% exams

**Learning objectives of the subject**

On completion of the course, students should be able to:
· Distinguish between the different structures of materials and relate them with the materials' properties and applications.
· Understand and apply material-testing standards.

**Study load**

### Description:
- Chemical bonds and types of materials.
- Crystalline structures and imperfections.
- Steady-state and non-steady-state diffusion.
- Plastic deformation mechanisms

### Related activities:
- Practical 1. Metallographic preparation.
- Practical 3. Grain size measurement.

### Specific objectives:
- Relate materials’ electronic structures, chemical bonds and general properties to one another.
- Relate crystalline structures and their defects to the general behaviour of families of materials.
- Identify diffusion mechanisms in solid materials, their time dependence and applicable equations.
- Study plastic deformation mechanisms in metal materials, the potential interaction between crystalline network defects and the mechanical behaviour of the material. Infer the limit condition for plastic deformation.
- Practical 1. Learn and practise the method for metallographic preparation of metal materials and identify the goodness of a sample by comparing it to established standards.
- Practical 3. Establish and practise the grain size measurement method for metal materials and establish the order of magnitude.

### Description:
- Elastic and plastic deformation.
- Mechanical tests.
- Failure and fracture mechanics.
- Fatigue.
- Creep.

### Related activities:
- Practical 2. Traction and resilience tests.
- Practical 4. Material hardness tests.

### Specific objectives:
For students to acquire the ability to define the relevant properties of materials used in structural applications, the tests used to quantify these properties and the values typical of families of materials.
### Phase and Microstructure Control Diagrams.

**Description:**
- Phase diagrams.
- Fe-C diagram.
- Cold work and recrystallisation.
- TTT diagrams.

**Related activities:**
Practical 5. Evolution of hardness according to the heat treatment and degree of plastic deformation applied to metal materials.

**Specific objectives:**
For students to understand how phase diagrams work and the influence of heat treatment on the properties of materials.

<tr>
<td>Self study: 15h 30m</td>
</tr>
</tbody>
</table>

### Corrosion and Degradation

**Description:**
- Corrosion in metal materials.
- Degradation of polymers and ceramics.

**Specific objectives:**
For students to acquire the ability to define the conditions in which materials corrode and degrade, the properties that prevent corrosion and degradation and the most relevant families of materials.

**Partial exam:** 30%
**Final exam:** 50%
**Laboratory:** 15%
**Self-directed learning:** 5%

The subject has a reevaluation test according to specific regulations of the school.

### Regulations for carrying out activities

The use of any electronic equipment with wireless communication capabilities is strictly forbidden in the evaluations.
