820012 - CIA - Industrial Control and Automation

Coordinating unit: 295 - EEBE - Barcelona East School of Engineering
Teaching unit: 707 - ESAII - Department of Automatic Control
Academic year: 2018
Degree:
- BACHELOR'S DEGREE IN ELECTRICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
- BACHELOR'S DEGREE IN MECHANICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
- BACHELOR'S DEGREE IN CHEMICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
- BACHELOR'S DEGREE IN BIOMEDICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
- BACHELOR'S DEGREE IN ENERGY ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
- BACHELOR'S DEGREE IN INDUSTRIAL ELECTRONICS AND AUTOMATIC CONTROL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
- BACHELOR'S DEGREE IN MATERIALS ENGINEERING (Syllabus 2010). (Teaching unit Compulsory)
- BACHELOR'S DEGREE IN BIOMEDICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
- BACHELOR'S DEGREE IN ENERGY ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
- BACHELOR'S DEGREE IN INDUSTRIAL ELECTRONICS AND AUTOMATIC CONTROL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
- BACHELOR'S DEGREE IN MECHANICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
- BACHELOR'S DEGREE IN CHEMICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
ECTS credits: 6
Teaching languages: Catalan, Spanish

Teaching staff
Coordinator: JOAN DOMINGO PEÑA
Others: JOAN SEGURA
JORDI SOLA
ANTONIO CALOMARDE
MARIA MAQUEDA
LEONARDO SARLABOUS
ALEX VALLMITJANA

Opening hours
Timetable: Previous hours to the class in teacher desk and preferably by appointment by e-mail.

Prior skills
For good follow the subject, is recommended to have passed the following subjects:
- Mathematics (I and II)
- Physics
- Electrical Systems
- Mechanical systems
- Computer Basics

Degree competences to which the subject contributes
Specific:
CEI-12. Understand the fundamentals of automatic control methods.
820012 - CIA - Industrial Control and Automation

Transversal:
1. TEAMWORK - Level 2. Contributing to the consolidation of a team by planning targets and working efficiently to favor communication, task assignment and cohesion.
2. EFFECTIVE USE OF INFORMATION RESOURCES - Level 2. Designing and executing a good strategy for advanced searches using specialized information resources, once the various parts of an academic document have been identified and bibliographical references provided. Choosing suitable information based on its relevance and quality.

Teaching methodology
The course uses approximately methodology expositive/participative by 25%, the 50% is individual work, and group work by 25%. We also used the techniques of cooperative learning and project/problem-based learning. The practical realization is essential to better understand the concepts worked.

Learning objectives of the subject
1. Acquire basic skills in design, analysis and implementation of automated systems.
2. Knowing different devices, components and systems involved in the process automation industry.
4. Learn the fundamentals of dynamic systems.
5. Understand methods of control systems.
6. Teamwork.
7. Management of information resources in the field of automation of industrial processes.

## Description:

## Related activities:
- Read complete guide (without annexes)
- Reading the information in Annex 1
- Reflection synthesis
- Reading the text of Annex 2
- Assignment 1: Self evaluation
- Assignment 2: Write a definition of control law
- Reading the text of Annex 3
- Assignment 3: Make a list of advantages and disadvantages of industrial control and self-matització
- Fill the template of time spent
- Send files to Virtual Campus
- Classroom problems/exercicies
- Lab practices
- Homework problems/exercicies

## Specific objectives:
Upon completion of the activities students will be able to:
- Understand the scope and content of the course and details relating to staff, dedication weekly regimen of practices, evaluation system and bibliography.
- Make a definition of Control Law using quality criteria.
- Differentiate the control to open loop and closed loop.
- Be aware of the scope and usefulness of industrial automation and its consequences.
- To apply automation technologies.
### Unit 1_2

**Learning time:** 9h
- Theory classes: 2h 30m
- Laboratory classes: 1h
- Guided activities: 0h 30m
- Self study: 5h

### Description:
Sensors; classification, characteristics, and connection type.

### Related activities:
- Reading the text of Annex 1
- Reflection synthesis
- Assignment 1: Finding information
- Assignment 2: Finding information
- Assignment 3: Finding information
- Assignment 4: Work on sensors and actuators
- Fill in file time
- Shipping to Virtual Campus
- Practice lab
- Problem/exercices sessions
- Homework problem/exercices

### Specific objectives:
Upon completion of the activities the student will be able to:
- Differentiate sensor transducer.
- Learn the most common sensors and ways of wiring.
# Unit 1_3

<table>
<thead>
<tr>

<tr>
<td>Self study:</td>
<td>5h</td>
</tr>
</tbody>
</table>

## Description:

## Related activities:
- Reading the text of Annex 1
- Reflection synthesis
- Assignment 1: Finding information
- Assignment 2: solving exercise
- Fill in file time
- Shipping to Virtual Campus
- Practice lab
- Problem sessions
- Homework problems

## Specific objectives:
Upon completion of the activities the student will be able to:
- Being able to explain what a GRAFCET.
- Know the most common structures GRAFCET.
**- Unit 1_4**

**Learning time:** 10h

- Theory classes: 2h 30m
- Laboratory classes: 1h
- Guided activities: 0h 30m
- Self study: 6h

**Description:**

**Related activities:**
- Access to information
- Reading the text of Annex 1
- Reflection synthesis
- Assignment 1: resolution of exercise
- Fill in file time
- Shipping to Virtual Campus
- Practice lab
- Problem sessions
- Homework problems

**Specific objectives:**
At the end of the activities the student will be able to:
- Differentiate the different types of actuators.
- The autoenclavaments relays as memory circuits.
- Be able to make schematic connection of actuators and pre-actuators.
# Unit 2_1

- **Learning time:** 12h
  - Theory classes: 3h
  - Laboratory classes: 1h
  - Guided activities: 6h
  - Self study: 2h

### Description:
Introduction to PLC.

### Related activities:
- Access to information
- Reading the text of Annex 1 and web
- Reflection synthesis
- Assignment 1: resolution of issues
- Fill in file time
- Shipping to Virtual Campus
- Practice lab
- Problem sessions
- Homework problems

### Specific objectives:
Upon completion of the activities the student will be able to:
- Understand PLC types.
- Write a PLC program.
- Identify the elements of the programming language of PLCs.
- Learn what are the languages of IEC 61131.
- Unit 2_2

Learning time: 9h
- Theory classes: 2h 30m
- Laboratory classes: 1h
- Guided activities: 0h 30m
- Self study : 5h

Description:

Related activities:
- Reading Annex 1
- Assignment 1: Questionnaire
- Reading Annex 2
- Assignment 2: Questionnaire
- Reading Annex 3
- Assignment 3: Exercise
- Shipping to Virtual Campus
- Practice lab
- Problem sessions
- Homework problems

Specific objectives:
Upon completion of the activities the student will be able to:
- Explain what is a PLC and its use in automation systems.
- Understand the internal architecture of a PLC.
- Explain characteristics of this technology in relation to technology
- Be able to write simple PLC programs wired.
- Explain what is a PLC scan cycle.
- Explain how is structured the PLC memory and his addressing systems.
- Unit 2_3

**Learning time:** 10h
- Theory classes: 2h 30m
- Laboratory classes: 1h
- Guided activities: 0h 30m
- Self study: 6h

**Description:**
PLC Programming: combinational elements and sequences with scales, timers, counters and others. Analog part of PLC and connection to and from analog components. Control of induction motors with inverters; connection and programatic. Examples.

**Related activities:**
- Reading the text of Annex 1
- Reflection synthesis
- Assignment 1: resolution of issues
- Fill in file time
- Shipping to Virtual Campus
- Practice Lab
- Problem sessions
- Homework problems

**Specific objectives:**
Upon completion of the activities the student will be able to:
- Programming a PLC using lists of instructions and diagrams contacts.
- Use the resources of programming a PLC.
- Explain how the map is distributed memory of the PLC.
- Connect sensors and actuators, digital and analog, to PLC.
- Use timers and counters a PLC.
- Know, connect and program inverters for control of induction motors.
- **Unit 3_1**

**Learning time:** 10h
- Theory classes: 2h 30m
- Laboratory classes: 1h
- Guided activities: 0h 30m
- Self study: 6h

**Description:**

**Related activities:**
- Reading the text of Annex 1
- Reflection synthesis
- Assignment 1: resolution of issues
- Reading the text of Annex 2
- Fill in file time
- Shipping to Virtual Campus
- Reading the example of Annex 3
- Practice lab
- Problem sessions
- Homework problems

**Specific objectives:**
At the end of the activities the student will be able to:
- Differentiate automation and control
- Be able to explain what they are and how they respond systems order 0, 1 and 2
- Recognize whether a system is stable or not
- Identify the behavior of a system and the type of response from the canonical functions
- Establish the equivalent mathematical model of simple physical system
### Unit 3.2

**Description:**

**Related activities:**
- Training groups
- Identification systems, simulators, classroom
- Solving exercises related to transfer functions and block diagrams
- Solving exercises related to stability
- Applying the Routh criteria
- Using graphics of root locus and Nyquist

**Specific objectives:**
Upon completion of the activities the student will be able to:
- Make transfer functions from differential equations.
- Build and simplify block diagrams.
- Use a simulator as help of characterization of systems
- To determine the stability of a system in open and closed loop
- Compensate poles and zeros.
- Use root locus and Nyquist graphics.

**Learning time:** 33h
- Theory classes: 7h 30m
- Laboratory classes: 3h
- Guided activities: 1h 30m
- Self study: 21h
- Units 3_3 & 3_4

**Description:**
Open and closed loop. Continuous regulators. Actions P, I, D, PI, PD, PID. Effect of each action on a system. PID syntonization criteria, Ziegler-Nichols and variants.

**Related activities:**
- Reading and study of teaching materials
- Practices
- Exercises solved in class
- Exercises to be solved in class, team
- Homeworks
- Use of simulators

**Specific objectives:**
At the end of the activities the student will be able to:
- Recognize the effect of P, I and D actions and their combined
- Tune regulator
- Discussion of the stability of open and closed loop systems
- Wear simulators
- Perform practically a PID control of a second order system with a PLC as a regulator
820012 - CIA - Industrial Control and Automation

- Unit 4 (Project)

Learning time: 9h
- Theory classes: 2h 30m
- Laboratory classes: 1h
- Guided activities: 0h 30m
- Self study: 5h

Description:
Presentation of a project. The Gantt chart. Group work. The project documentation. Working methodologies. Make a project of automation and control with PLC. Simulation results, budgeting and calculating energy consumption.

Related activities:
Complete reading of this guide (without annexes)
Elaboration of a Gantt chart
Rules teamwork
Attainment Targets
Completion of a technical report sections
Process simulation both analog and digital
Sending Athena

Specific objectives:
At the end of the activities the student will be able to:
- Do a full automation project.
- Make Gantt charts.
- Make memories projects.
- Teamwork.
- Searching for information according to a rubric.
820012 - CIA - Industrial Control and Automation

- Unit 5

<table>
<thead>
<tr>
<th>Learning time: 2h</th>
</tr>
</thead>
<tbody>
<tr>
<td>Theory classes: 1h</td>
</tr>
<tr>
<td>Self study: 1h</td>
</tr>
</tbody>
</table>

Description:
Introduction to data acquisition systems, supervision and control. Basic Elements. Distribution of basic elements and communication between them. The graphical interface with the latest features and typical components. Data acquisition and control variables: characteristics and configuration. Introduction to industrial communications.

Related activities:
- Complete reading of study guide
- Read Chapter 1 Systems Supervisión CEA-IFAC (CEA-IFAC_Cuadernos_Supervisión_1.pdf file)
- Taking a
- Reading Annex 1
- Taking 2
- Reading Annex 2
- Taking 3
- Reading Annex 3
- 4 Commissioning
- Fill the template of time spent
- Shipping to Virtual Campus
- Problem sessions
- Homework problems

Specific objectives:
Upon completion of the activities the student will be able to:
- Explain what we mean by data acquisition system, supervision and control and what are its basic elements.
- Recognize the responsibility of a monitoring system and control the operation of the plant controlled.
- Explain the basic capabilities offered by commercial software monitoring and control its use.

Qualification system
- Partial controls: 40% (two, with 20% each). These controls are personal, written and performed in classroom.
- Control of practices: 10%
- Exercises and problems: 15% whenever it made and delivered 80% of proposed during the course (IF \([\text{nºprobl} <> 0]\) > 80% Average THEN 0 ELSE)
- Lab practices: 10% whenever it made and delivered 80% of proposed during the course (IF \([\text{nºprobl} <> 0]\) > 80% Average THEN 0 ELSE)
- Competence Management information resources 10%. This competence and participation in debates usually take place via Twitter.
- One comprehensive project with the contents of the subject at the end of the course. Add just a 15% of the final grade. This subject not has re-evaluation because is based on a continuous assessment system where every student must be adding qualifications throughout the whole course, many of them derived from such teamwork in the classroom and outside the classroom.
Regulations for carrying out activities

No further delivery to the campus or in hand when this is proposed, which is made entirely by computer and office tools, and PDF format file. Only be given exercises hand written when carried out in the same class session. Which are outside of class, will always be machine made and PDF. Also supplies paper exercises. Practices are hand delivered solved unless otherwise indicated.

Regarding partial control is recommended to have a calculator and has completely banned the use of mobile phones. If necessary, the teacher will warn before the test. Unless specified otherwise all controls can be made with classnotes, books, computers, tablets, etc.
