820020 - TTC - Thermodynamics and Heat Transfer

Teaching methodology
The contents of the subject will be developed using master classes and promoting the participation of students with active methodologies. The student must perform individual work while solving problems and preparing exams, and also teamwork to tackle complex problems and lab practices.

Learning objectives of the subject
Give the student basic knowledge in the analysis of thermodynamical systems (both power or refrigeration systems) as well as in the basic heat transfer mechanisms.

Qualification system

Mid-term exams (35%); Classwork/problems (10%); Final exam (35%); Lab practices (15%); Generic skills (5%). In order to pass the course it is mandatory to attend to all lab practices and deliver the correspondent lab reports. There is a re-evaluation test for this subject.
Regulations for carrying out activities

The evaluation will be conducted through written tests both for the mid-terms and final exam. Exercises and problems will be graded based on the material produced by students. Practices will be graded based on a pre-test to be presented before the lab practice start, attendance (mandatory) and lab activity developed, together with the preparation and delivery of lab reports.
