820022 - BMTB - Biomaterials

**Coordinating unit:** 295 - EEBE - Barcelona East School of Engineering

**Teaching unit:** 702 - CMEM - Department of Materials Science Science and Metallurgy

**Academic year:** 2019

**Degree:** BACHELOR'S DEGREE IN BIOMEDICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN BIOMEDICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)

**ECTS credits:** 6

**Teaching languages:** Catalan

**Coordinating unit:**

**Coordinator:** DANIEL RODRÍGUEZ RIUS

**Others:**

DANIEL RODRÍGUEZ RIUS
Lluma Fuentes, Jordi
Español Pons, Montserrat
Pegueroles Neyra, Marta
Buxadera Palomero, Judit

**Opening hours**

**Timetable:** Published in Atenea.

**Requirements**

FISIOLOGIA - Prerequisite

**Degree competences to which the subject contributes**

**Specific:**

CEBIO-34. Discern the fundamental criteria that a material must meet before it can be implanted.

CEBIO-250. Identify the fundamental concepts and application principles of biomaterials and apply them to biomedical engineering problems.

**Transversal:**

1. SELF-DIRECTED LEARNING - Level 3. Applying the knowledge gained in completing a task according to its relevance and importance. Deciding how to carry out a task, the amount of time to be devoted to it and the most suitable information sources.

**Teaching methodology**

The methods employed are:

- 30% presential lessons
- 5% directed presential work (problems)
- 10% laboratory classes
- 55% self-study

An important component of learning is based on the realization of a practical project in groups. It includes preparation and implementation of mechanical testing of biomaterials and programming and processing of the acquired data. It is an activity initially guided, but later the student must develop it more independently and linked to the knowledge acquired in the course.
820022 - BMTB - Biomaterials

Learning objectives of the subject

Upon completion of the course, the student shall be able to:
- understand the basic requirements of a biomaterial and the basic tests for its characterization.
- understand the fundamental basis and concepts of biomaterial application within biomedical engineering.
- be able to perform experimental testing on biomaterials.

## Definition, classification and properties of biomaterials

### Description:
Presentation of the characteristics of biomaterials: what is a biomaterial, how is it classified and what are their most important properties. Description of the main techniques used for biomaterial characterization.

### Related activities:
- Practical experience: 1.
- Practice: Activity 2.
- Partial control.

### Specific objectives:
- Definition of Biomaterials.
- Classification of biomaterials.
- Properties of Biomaterials.

### Learning time:
- Theory classes: 17h
- Laboratory classes: 4h
- Self study: 29h

## Biomaterials' behaviour in biological systems

### Description:
Study the response of biomaterials implanted in a biological environment, the interaction with tissues and the mechanisms of degradation of implanted biomaterials.

### Related activities:
- Practice: Activity 3.

### Specific objectives:
- Properties of materials.
- Surface characterization of materials.
- Biomaterial-tissue interaction.
- Degradation of biomaterials in service.

### Learning time:
- Theory classes: 7h
- Laboratory classes: 2h
- Self study: 11h

Qualification system

Partial controls (2): 30%
Final control: 35%
Laboratory: 10%
Lab practicum and generic competences: 25%
This subject does not include a reevaluation test.

Regulations for carrying out activities

The use of devices with communication capabilities is not allowed.
