Prior skills
This is a second programming course. Preferrably it is desirable that the students have acquired already the basic programming habilities (done in Informática Q1).

Degree competences to which the subject contributes

Specific:
1. Understand the basics behind the use and programming of PCs, operating systems, databases and software with applications in engineering.

Transversal:
2. EFFECTIVE USE OF INFORMATION RESOURCES - Level 3. Planning and using the information necessary for an academic assignment (a final thesis, for example) based on a critical appraisal of the information resources used.

Teaching methodology
There are weekly one theory session and one practice session in computer laboratory. In parallel the studends will propose and develop a project. Some practice sessions along the course will be devoted to the proposal. Collaborative learning. Project based learning (PBL).

Learning objectives of the subject

Learning objectives:
1. Analyzing complex problems by means of mechanisms or reduction to smaller problems.
2. Introducing the student to the use of abstract data types.
3. Introducing the student to Object Oriented Programming.
4. Introducing the student to Event Oriented Programming and development of applications with graphical interface (GUI)
