820143 - EMDEE - Electrical Machines Design

Coordinating unit: 295 - EEBE - Barcelona East School of Engineering
Teaching unit: 709 - EE - Department of Electrical Engineering
Academic year: 2018
Degree: BACHELOR'S DEGREE IN ELECTRICAL ENGINEERING (Syllabus 2009). (Teaching unit Optional)
ECTS credits: 6

Teaching languages: Catalan

Teaching staff

Coordinator: Ramon Bargalló Perpiña
Others: Ramon Bargalló Perpiña

Prior skills

MAtrix analysis.
Fourier Methods.
Electromagnetics.
Electrical Machines 1 and 2.
Use of scientific calculator (HP 50G, CFX9950, other)
Use of MATLAB

Requirements

ElElectrical Machines 1 and 2.

Degree competences to which the subject contributes

Specific:
1. Carry out calculations for the design of electrical machines.
2. Apply regulations and standards based on sound criteria.
3. Summarise information and undertake self-directed learning activities.

Transversal:
4. SELF-DIRECTED LEARNING - Level 3. Applying the knowledge gained in completing a task according to its relevance and importance. Deciding how to carry out a task, the amount of time to be devoted to it and the most suitable information sources.

Teaching methodology

Expositive methodology for theory classes.
PBL for exercises classes.
Training on FE software on laboratory classes.

Learning objectives of the subject
820143 - EMDEE - Electrical Machines Design

- To do to the student a general scope in the field of electrical machines and drives. The main treated aspects are their modelling and design.
- To put into practice the FE method to analyse and design electrical machines and apparatus
- Explain general rules and methods for size electrical machines.
- Explain the main characteristics for materials used in the electrical machines to obtain an optimal design (technical, economical, environmental, etc. criterions are used)

## Content

### Electrical machines modeling using electromagnetic equations.

**Learning time:** 19h  
- Theory classes: 6h  
- Laboratory classes: 3h  
- Self study: 10h  

**Description:**  

**Related activities:**  
- Inductance analysis using FE software.  
- Actuator analysis using FE software.  

### Windings for electrical machines

**Learning time:** 18h  
- Theory classes: 6h  
- Laboratory classes: 2h  
- Self study: 10h  

**Description:**  
Basis: salient pole windings, slot windings, end windings. Phase windings. MMF and EMF. Fractional windings. Other windings.  

**Related activities:**  
- Winding design for a AC machine. Analysis of MME and EMF.  

### General concepts and limitations in the design of electrical machines.

**Learning time:** 16h  
- Theory classes: 6h  
- Self study: 10h  

**Description:**  
General expressions for torque. Standards. Scale laws. Flux constant and weakening field work of electrical machines.  

**Related activities:**  
- Inductance analysis using FE software.  
- Actuator analysis using FE software.  

**Related activities:**  
- Winding design for a AC machine. Analysis of MME and EMF.

</tbody>
</table>

**Description:**
FE determination of: losses, emf, cogging torque, torque, inductance, resistance, capacitance, etc.

**Related activities:**
Transformer analysis.

<table>

<tr>
<td>Laboratory classes: 4h</td>
</tr>
<tr>
<td>Self study: 20h</td>
</tr>
</tbody>
</table>

**Description:**
General formulation for sizing electrical machines. Application to: asynchronous, synchronous and permanent magnet machines. Every course one or more detailed process design will be developed.

**Related activities:**
- FE analysis of:
  - asynchronous machine. Steady state characteristics
  - synchronous PM machine. Torque-angle characteristic, cogging torque, EMF determinations.
  - Radial forces. Noise analysis.

### Insulation of electrical machines

<table>
<thead>
<tr>
<th>Learning time: 13h</th>
</tr>
</thead>
<tbody>
<tr>
<td>Theory classes: 3h</td>
</tr>
<tr>
<td>Self study: 10h</td>
</tr>
</tbody>
</table>

**Description:**
Insulation materials. Monitoring insulation. Statistical analysis. Predictive analysis

### Qualification system

Final test: 20%
Laboratory: 20%
Homework exercises + class exercises: 20%
Homework project (design an electrical machines): 40%

### Regulations for carrying out activities

Final test with open books. NO final reexam.
