Degree competences to which the subject contributes

Specific:
2. Understand the principles and applications of automated systems.

Transversal:
3. EFFECTIVE USE OF INFORMATION RESOURCES - Level 2. Designing and executing a good strategy for advanced searches using specialized information resources, once the various parts of an academic document have been identified and bibliographical references provided. Choosing suitable information based on its relevance and quality.

Learning objectives of the subject

The general objective of the course is the presentation of two key technologies used in automated productive environments: industrial robotics and computer vision.

From the students perspective, the specific objectives associated with the field of industrial robotics are the following:
- Know the structure and basic operation of industrial manipulator robots.
- Know the main applications of industrial robots.
- Know the technology of the different elements that make up a robot.
- Know and know how to apply the physical principles necessary for the design and control of robots.
- Know how to program basic tasks in a commercial industrial robot.

Regarding the area of computer vision, the objectives are:
- Know the physical elements that make up an artificial vision system.
- Know the basic steps involved in image processing.
- Know the standard techniques of image processing.
- Know how to program vision applications.
### Study load

**Description:**
- Learning time: 9h
- Theory classes: 3h
- Self study: 6h
- Theory classes: 3h
- Self study: 6h
- Theory classes: 6h
- Self study: 12h
- Theory classes: 3h
- Laboratory classes: 6h
5. **Robot programming.**

**Description:**

**Learning time:** 17h
- Theory classes: 3h
- Laboratory classes: 8h
- Self study: 6h

6. **Applications.**

**Description:**

**Learning time:** 9h
- Theory classes: 3h
- Self study: 6h

7. **Introduction to computer vision.**

**Description:**
Definitions. Application domains. Industrial applications of computer vision.

**Learning time:** 9h
- Theory classes: 3h
- Self study: 6h

8. **Image acquisition and processing systems.**

**Description:**
Components of a computer vision system. Optical devices. Illumination systems. Specialized hardware for image processing.

**Learning time:** 9h
- Theory classes: 3h
- Self study: 6h

9. **Image processing techniques.**

**Description:**

**Learning time:** 27h
- Theory classes: 9h
- Self study: 18h
### 10. Programming computer vision applications.

<tr>
<td>Self study : 6h</td>
</tr>
</tbody>
</table>

**Description:**
Programming computer vision applications using MATLAB.

#### Qualification system

The evaluation formula used in the course is the following:
- First exam: 35%
- Second exam: 35%
- Laboratory: 20%
- Exercises: 10%

The students will be able to access the re-assessment test that meets the requirements set by the EEBE in its Assessment and Permanence Regulations (https://eebe.upc.edu/ca/estudis/normatives-academiques/documents/eebe-normativa-avaluacio-i-permanencia-18-19-aprovat-je-2018-06-13.pdf)
