820222 - EAEIA - Analogue Electronics

Coordinating unit: 295 - EEBE - Barcelona East School of Engineering
Teaching unit: 710 - EEL - Department of Electronic Engineering
Academic year: 2019
Degree: BACHELOR'S DEGREE IN INDUSTRIAL ELECTRONICS AND AUTOMATIC CONTROL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN INDUSTRIAL ELECTRONICS AND AUTOMATIC CONTROL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
ECTS credits: 6
Teaching languages: Catalan, Spanish, English

Teaching staff
Coordinator: HERMINIO MARTINEZ GARCIA
Others: Primer quadrimestre:
PEDRO FRANCISCO GAYA SUÑER - M13, M14, M17
MANUEL ANDRÉS MANZANARES BROTONS - M11, M12, M15, M16
HERMINIO MARTINEZ GARCIA - M11, M12, M13, M14, M15, M16, M17

Segon quadrimestre:
JAVIER GARCIA ALVAREZ - T17, T18
PEDRO FRANCISCO GAYA SUÑER - T11, T12, T13, T14
HERMINIO MARTINEZ GARCIA - T11, T12, T13, T14, T15, T16, T17, T18
OLIVER MILLÁN BLASCO - T15, T16

Opening hours
Timetable: To determine at the semester beginning. It will be announced to the whole students the first week of the course.

Prior skills
The skills acquired in the following courses of the Bachelor's Degree in Industrial Electronics and Automation Engineering (EIA):
- Electronic Systems (STI - 820017).
- Circuit Theory and Electrical Machines (TCME - 820225).
- Electronics Technology (TE-EIA - 820231).

Requirements
REGULACIÓ AUTOMÀTICA - Corequisit
SISTEMES ELECTRÒNICS - Prerequisit
TECNOLOGIA ELECTRÒNICA - Corequisit
TEORIA DE CIRCUITS I MAQUINES ELÈCTRIQUES - Prerequisit

Degree competences to which the subject contributes
820222 - EAEIA - Analogue Electronics

Specific:
1. Design analogue, digital and power systems.
2. Understand the applications of electronic instrumentation.
3. Understand the fundamentals and applications of analogue electronics.

Transversal:
10. SELF-DIRECTED LEARNING - Level 3. Applying the knowledge gained in completing a task according to its relevance and importance. Deciding how to carry out a task, the amount of time to be devoted to it and the most suitable information sources.

Teaching methodology

Two theory classes per week with a total of 3.0 h/week, which encompass matter of theory and problems, and 1 h/set. of laboratory classes, grouped into fortnightly sessions.

Additionally, throughout the semester, different classes will be held (schedule will be announced at the beginning of term) with the whole group or part thereof in order to explain, develop and assess cross (generic) competences assigned to the subject.

The course uses:
- Lecture methodology by 40%.
- Individual work by 30%.
- Work in groups by 30%.

The student will develop, in groups of, at most, 2 students, a project of the course design, simulation, and/or implementation related to the content of the course.

Learning objectives of the subject

1.- To know the different types, internal structures, operation and application circuits of commercial devices and integrated circuits for analog signal processing (VFOAs, OTAs, CCIs, CCIIs, CFOAs, etc.).
2.- To know the main electrical characteristics and practical limitations (static and dynamic) of the main commercial integrated circuits for analog signal processing.
3.- To understand the concept of 'saturated state' and 'non-saturated state', 'linear electronic function' and 'non-linear electronic function'.
4.- To know how to analyze, design, simulate, and implement basic and advanced analog systems that implement linear and nonlinear generation of waveforms and sinusoidal oscillators, regulators and voltage references, etc.
5.- To know the synthesis of analog and digital filtering structures, the principle of switched capacitor circuits (SC), and the classification and types of SC circuits.
6.- To develop skills in simulation techniques and experimental measurement in analog electronic circuits and systems.
7.- Autonomous learning and the development of student teamwork.
8.- To use English in advanced information search (manufacturers datasheets, IEEE journal articles, etc.), regarding the presentation of written and oral work in the course.

---

**Qualification system**

The grade or scoring of the course will be carried out according to:

- 1 or 2 midterm exams: 20%.
- Final Exam: 40%.
- Course project (project to design, simulate, and implement analog electronic systems): 20%.
- Laboratory activities and tests: 20%.

All these tasks will also serve to assess the cross (generic) competences assigned to the course.

This course does not have re-assessment test ("prova de reavaluació").

---

**Regulations for carrying out activities**

The implementation of the different tests consists of:

- Midterm exams: written tests, theoretical or sizing problems of solar energy testing, and analysis and/or synthesis (design) of analog electronic systems.
- Final exam: written, theoretical and/or sizing problems of solar energy test, and analysis and synthesis (design) of analog electronic systems.
- Course project: The course project will involve conducting course design work, sizing and/or simulation related to the contents of the subject.
- Activities, testing and laboratory experiments: Laboratory experiences and activities on Electronics Engineering.

Thanks to all these tasks, the cross (generic) competences assigned to the course will be also evaluated.

---

**Learning time:** 7h
- Theory classes: 2h
- Self study: 5h
