820325 - GETF - Thermal and Fluid Dynamic Power Generation

Coordinating unit: 295 - EEBE - Barcelona East School of Engineering
Teaching unit: 729 - MF - Department of Fluid Mechanics
Academic year: 2019
Degree: BACHELOR'S DEGREE IN ENERGY ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN ENERGY ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
ECTS credits: 6               Teaching languages: Catalan

Teaching staff
Coordinator: Joan Grau
Others: Joan Grau, Pere Rufes, Andrés Andreatta, Vicente Bitrian

Requirements
MECÀNICA DE FLUIDS - Prerequisite
TERMODINÀMICA I TRANSFERÈNCIA DE CALOR - Pre-requisite

Degree competences to which the subject contributes

Specific:
CEENE-190. (ENG) Analizar los principios de operación de centrales termofluidodinámicas.
CEENE-13. Analyse the principles of operation of generators and boilers.

Transversal:
3. EFFICIENT ORAL AND WRITTEN COMMUNICATION - Level 2. Using strategies for preparing and giving oral presentations. Writing texts and documents whose content is coherent, well structured and free of spelling and grammatical errors.

Teaching methodology
The course content will develop a methodology and participatory exhibits when taught the theoretical content. Students will work individually to make the understanding, analysis and synthesis of theory. In addition, teamwork will be necessary to address complex problems (theoretical and laboratory).

Learning objectives of the subject
To know the operation and the dimensioning of heat engines and hydraulic and heat transfer equipment commonly used in industry.

# 820325 - GETF - Thermal and Fluid Dynamic Power Generation

## Content

| -1. Thermal generation: Combustion. Steam boilers. Solar thermal energy applications. | **Learning time:** 36h  
Theory classes: 12h  
Laboratory classes: 2h 30m  
Self study: 21h 30m |
| --- | --- |
| **Description:**  
**Related activities:**  
Laboratory: Solar Thermal Installation  
**Specific objectives:**  
After completing this section, the student will recognize different heat generation systems, including the use of fuels and solar radiation in thermal systems. The student will also be able to perform basic design tasks for heat generation systems. |

| -2. Hydraulics machines. Turbomachines and volumetrics machines | **Learning time:** 27h 30m  
Theory classes: 9h  
Laboratory classes: 2h  
Self study: 16h 30m |
| --- | --- |
| **Description:**  
**Related activities:**  
Laboratory: Pelton turbine  
**Specific objectives:**  
Get classification criteria of the hydraulic machines. Knowing the kinematics of flow in the impeller of turbomachines and their influence on energy transfer in the impeller. Understand the different types of pumps, their essential functional elements and their application areas. Understand the different types of turbines, their essential functional elements and their operating environments. Knowing how to use the similarity to redesign pumps and turbines similar to other existing |

**Description:**

**Related activities:**
Laboratory: Heat exchanger, experimental and numerical study (2 sessions)

**Specific objectives:**
After completing this section the student will understand the operation and basic design principles of heat exchangers, the thermodynamics of moist air and its application to the design of cooling towers.

</table>

**Description:**

**Related activities:**
Laboratory: alternative compressor

**Specific objectives:**
After completing this section, the student will recognize different gas power generation cycles and equipments and the required criteria to perform basic design tasks.

**Description:**

**Related activities:**
Laboratory: Thermal power plant I and II (2 sessions)

**Specific objectives:**
After completing this section, the student will recognize different steam power generation cycles and equipment and the required criteria to perform basic design tasks.

**Learning time:** 25h
- Theory classes: 6h
- Laboratory classes: 4h
- Self study: 15h

### 6. Refrigeration cycles and heat pumps.

**Description:**

**Related activities:**
Laboratory: Heat pump

**Specific objectives:**
After completing this section, the student will recognize different refrigeration cycles and equipment and the required criteria to perform basic design tasks.

**Learning time:** 20h
- Theory classes: 6h
- Laboratory classes: 2h
- Self study: 12h
This document contains information about the course 820325 - GETF - Thermal and Fluid Dynamic Power Generation. It details the qualification system, which includes written tests in partials and final tests, assessments of exercises and problems based on the delivery of material, practices based on attendance and activity performed in laboratory together with the preparation and delivery of practice reports, and an interdisciplinar project carried out together with other subjects of the specialty. The evaluation is structured as follows:

- Partial tests: 20%
- Exercises / problems: 10%
- Practices: 15%
- Final test: 25%
- Generic competence: 5%
- Interdisciplinar project: 30%

A necessary condition to pass the subject is attending all practices and the completion and delivery of the reports. The subject has a reevaluation test following the conditions defined in the academic regulations. The students will be able to access the re-assessment test that meets the requirements set by the EEBE in its Assessment and Permanence Regulations (https://eebe.upc.edu/ca/estudis/normatives-academiques/documents/eebe-normativa-avaluacio-i-permanencia-18-19-aprovat-je-2018-06-13.pdf).

The bibliography includes the following works:
