## Degree competences to which the subject contributes

### Specific:
- CEENE-220. Knowledge of the principles of operation of liquid, gas and vapour transport and distribution systems for the transport.

### Transversal:
- 5. TEAMWORK - Level 2. Contributing to the consolidation of a team by planning targets and working efficiently to favor communication, task assignment and cohesion.

## Teaching methodology

The course uses the methodology exhibition by 40%, individual work by 20%, work in groups by 40%. Ability in "Team Work", which is the rate that corresponds to this subject will be evaluated within the student's work to make the project that is commissioned during the semester.
Acquire the knowledge necessary for the calculation, modeling and simulation of transport facilities and channeling fluid power, knowledge and calculation of the thermodynamic properties of water vapor, and ability to design industrial distribution of water vapor. Knowledge of the physical properties of natural gas, and the operation of extraction facilities and distribution of this fuel. Computing capacity of f LNG vaporization installations.

# Content

## CHAPTER 1: SYSTEMS OF UNITS USED IN ENGINEERING

**Description:**
Dimensional analysis. Absolute systems, technical, engineering and mixed or international system. Getting processes formulas by dimensional analysis.

### Learning time: 3h
- Theory classes: 1h
- Self study: 2h

## CHAPTER 2: PIPELINES FOR ENERGY TRANSPORT LÍQUIDES

**Description:**

### Learning time: 16h
- Theory classes: 6h
- Self study: 10h

## Chapter 3: STEAM. TYPICAL TECHNOLOGICAL AGENT OF ENERGY TRANSPORT

**Description:**
Saturated steam, wet steam and superheated steam: degrees of freedom and thermodynamic quantities. Specific calculation of the magnitudes of both the saturated steam as the wet steam and superheated steam. Determining a moisture vapor (condensation and strangulation methods). Enthalpy balances in steam plant. Mollier diagram. Schematic and parts of a steam boiler. Comprehensive facility energy use, with steam as the main carrier of energy. Application to a waste incineration plant. Exercises and problems.

### Learning time: 20h 30m
- Theory classes: 6h 30m
- Laboratory classes: 4h
- Self study: 10h

## CHAPTER 4 - MODELLING AND SIMULATION OF FLUID PIPES AND VAPOR TRANSPORT INSTALLATIONS

**Description:**

### Learning time: 16h
- Theory classes: 2h
- Laboratory classes: 6h
- Self study: 8h

| **CHAPTER 5 - NATURAL GAS AS STRATEGIC FLUID FOR ENERGY TRANSPORT** | 16h | Theory classes: 6h  
Self study: 10h  
**Description:**  
| **CHAPTER 6 - LIQUEFIED NATURAL GAS (LNG)** | 16h | Theory classes: 6h  
Self study: 10h  
**Description:**  
Composition of LNG compared to the GN. History of LNG. Security of LNG. Liquefaction of natural gas. Regasification of LNG-transport of LNG. Solving exercises and problems. |
| **CHAPTER 7 - PROCESSING AND DISTRIBUTION OF ENERGY** | 3h | Theory classes: 1h  
Self study: 2h  
**Description:**  
End of the route of transport of energy by fluid power piping. Operation of power stations. Starting the electricity supply system. |
| **CHAPTER 8 - MODELING AND SIMULATION OF INDUSTRIAL VAPORIZERS LNG** | 14h 30m | Theory classes: 1h 30m  
Laboratory classes: 5h  
Self study: 8h  
**Description:**  
Modelling and simulation of LNG vaporizers. In particular, the case of the vaporizers that using the sensible heat of sea water to the evaporation process. |
820330 - TDFE - Energy Fluid Transmission and Distribution

**PROJECT IN THE FIELD OF ENERGY**

| Learning time: 45h |
| Guided activities: 15h |
| Self study: 30h |

**Description:**
The project will focus on a topic contained within the field of the four specific SUBJECTS degree "Degree in Energy Engineering" taught in the fifth semester: "Generation Thermal fluid", "Electricity Generation", "Transport and Distribution Energy - I" and "Management of the Energy Industries." This is an activity common to all four subjects.

**Qualification system**

First Control Partial: 25% ç  
Second Partial Control: 25%  
Exercises in charge and Reports of Practice: 20%  
Project (including the assessment of competition): 30%  
No Examination of Reevaluation will take place

**Regulations for carrying out activities**

Students will be tested individually in a classroom in partial checks. Submit exercises correspond to proposals for calculating industrial installations and process units, derived from topics of Modelling and Simulation practices, and experimental practice of the steamer, and carried out by groups outside the classroom. The Transversal Project will conform to the standards common to all courses involved.
