820460 - PMM - Mechanical Projects

Coordinating unit: 295 - EEBE - Barcelona East School of Engineering
Teaching unit: 712 - EM - Department of Mechanical Engineering
Academic year: 2015
Degree: BACHELOR'S DEGREE IN MECHANICAL ENGINEERING (Syllabus 2009). (Teaching unit Optional)
BACHELOR'S DEGREE IN MECHANICAL ENGINEERING (Syllabus 2009). (Teaching unit Optional)
ECTS credits: 6
Teaching languages: Catalan

Teaching staff

Coordinator: JOSE ANTONIO TRAVIESO RODRIGUEZ
Others: ALBERTO FORTUNY GARCIA - RUBEN ARROYO GONZALEZ

Prior skills

Knowledge about mechanical design and manufacturing

Requirements

Have taken and passed the courses of TDMM2 and EPFM

Degree competences to which the subject contributes

Specific:
1. Understand manufacturing, metrology and quality assurance systems and processes.
2. Calculate the characteristics of, design and test machines.

Transversal:
4. TEAMWORK - Level 3. Managing and making work groups effective. Resolving possible conflicts, valuing working with others, assessing the effectiveness of a team and presenting the final results.

Teaching methodology

- The classes of the course is designed to develop Project Type (PBL).
- The work will be done in groups of 2 or 3 members each, at most.
- Teachers will support and guidance.
- All work that is delivered on the date indicated will not be received.

Learning objectives of the subject

To understand and know how to calculate, apply and integrate the various structural elements, and transmission of guidance in the design of machines.
Learn to design the manufacturing process of various elements in a machine.
## Study load

<table>
<thead>
<tr>
<th>Total learning time: 150h</th>
<th>Hours large group: 45h</th>
<th>30.00%</th>
</tr>
</thead>
<tbody>

The subject Mechanical Projects will be based on the development of a mechanical engineering project. The work consists of designing a set of mechanical components and design of the manufacturing process of its components.

The work was developed from the following statement:

A company dedicated to the commercialization of industrial fans want to launch a new product to market. As engineers we are free exercise commissioned the study and design a complete new models. The features that should have this model are:

- Motor power: 2KW about
- It must be transported in a van

The design and definition of the product will be in the first phase:

First Phase: Conceptual Description of the product through a table of functional specifications. Pre-set design, the design of parts and elements in the set., Selection of appropriate materials for each of the elements and the selection of standardized components and business need.

**Related activities:**

Tasks to develop

1. Conceptual Description of the product through a table of functional specifications
2. Pre-set the overall design
3. Detailed design of all

**Specific objectives:**

- Develop knowledge with practical applications in different subjects of the race, and use them in a project "real,"
- Learning to work together to make decisions without constant guidance of the teacher should be consulted literature, catalogs, technical information, etc..
- Become familiar with the problems and the design process.
- Learn to use standards and catalogs.
- Gain a global perspective on the development of a draft or draft.
- Learn how to submit reports and project reports.
To evaluate the course will be considered in three areas:

- The work done in class (30%)
- The report submitted, which will consider both the content and the way it is presented (30%)
- The quality of the exhibition of the work and how defense (40%)

Qualification system

To evaluate the course will be considered in three areas:

- The work done in class (30%)
- The report submitted, which will consider both the content and the way it is presented (30%)
- The quality of the exhibition of the work and how defense (40%)

Regulations for carrying out activities

Presentation of the work done
- The work must be submitted properly bound and presented, according to the rules of the Final Grade (GFR).
- You will have to submit a written report of work in computer space to 1.5 A4 sheet with Arial 12. The extent of memory should be approximately 20 pages. In addition, this report must be submitted in digital format also.

EXHIBITION
- Must be to develop a plan that contains the basic points of the exhibition. It will not read fluently and naturally.
- To do this you have 15 minutes for each task.
- The exhibition will be a PowerPoint presentation, slides, films, or other resources and / or material support.
- Must be made also a leaflet with commercial information of the machine

Bibliography

(ENG) - Tema 2. Disseny del procès de fabricació de les parts d'una màquina

Learning time: 75h
- Practical classes: 30h
- Self study: 45h

Description:
Stages of manufacturing
Second phase: Implementation of the plans and drawings of all construction details of each piece. Design of manufacturing process / decide which components are manufactured at the company. Economic assessment of what they decide to outsource its manufacturing to outside companies.

Third phase: Preparation of all documentation must accompany the Project Report, User Machine, Maintenance Manual, Budget Presentation.

Related activities:
Tasks to develop
1. Producing a map of the whole and of each component, describing the dimensions, geometric characteristics, surface and manufacturing required
2. Deciding which process is most suitable for the manufacture / parts to be manufactured
3. Make a description of the selected process. Discuss your most important features and machinery to be used.
4. Detail the operations performed to make the / selected pieces (Route manufacturing technology for machining).
5. Calculations corresponding to the selected machine tool to be used in each operation, taking into account the available machines in the workshop

Specific objectives:
- Use tools to carry out plans.
- Learn to design the manufacturing process of a piece.
