Course guide
205050 - 205050 - Infrared Thermography for Building Diagnostics

Unit in charge: Terrassa School of Industrial, Aerospace and Audiovisual Engineering
Teaching unit: 758 - EPC - Department of Project and Construction Engineering.

Degree:
- MASTER’S DEGREE IN INDUSTRIAL ENGINEERING (Syllabus 2013). (Optional subject).
- MASTER’S DEGREE IN AERONAUTICAL ENGINEERING (Syllabus 2014). (Optional subject).
- MASTER’S DEGREE IN SPACE AND AERONAUTICAL ENGINEERING (Syllabus 2016). (Optional subject).

Academic year: 2022      ECTS Credits: 3.0      Languages: English

LECTURER

Coordinating lecturer: Blanca Tejedor

Others:

TEACHING METHODOLOGY

The teaching methodology is focused on performing some tests and practices in relation with the concepts exposed over the course. The main aim is to establish a useful guideline for the student in order to detect anomalies and determine thermal properties of building elements. Like this, the student may propose improvements and solutions regarding building refurbishment.

LEARNING OBJECTIVES OF THE SUBJECT

STUDY LOAD

<table>

Total learning time: 75 h
## CONTENTS

### Module 1: Introduction to Infrared thermography

**Description:**
- Energy Audit Process
- What is IRT? Definition and Applications
- Infrared Camera: How capture an image
- Heat Transfer in relation with IRT

**Related activities:**
- What is the correlation between the variables to be measured and instruments to be used?
- To develop a document and presentation about a specific application where IRT is relevant. The background of such application is required
- To enumerate and explain what conditions are needed for inspections or tests by IRT
- To practice with an IR camera and Software FLIR TOOLS

**Full-or-part-time:** 32h  
Theory classes: 12h  
Self study: 20h

### Module 2: IRT for building diagnostics

**Description:**
- Techniques of measurement and assessment
- Interpretation of a thermogram
- IRT for building refurbishment

**Related activities:**
- How detect anomalies by qualitative IRT
- To analyze a sequence of thermograms recorded in a specific data acquisition interval by IR camera.
- To determine thermal properties of a building façade.
- To describe solutions for anomalies detected in buildings by IRT. It can be used techniques of refurbishment

**Full-or-part-time:** 43h  
Theory classes: 15h  
Self study: 28h

### GRADING SYSTEM

20% (ATTENDANCE & PARTICIPATION IN CLASS) + 80% PRACTICES

### RESOURCES

**Other resources:**
Material attached in virtual Campus
