205067 - Advanced Cubesat Mission Design

Coordinating unit: 205 - ESEIAAT - Terrassa School of Industrial, Aerospace and Audiovisual Engineering
Teaching unit: 205 - ESEIAAT - Terrassa School of Industrial, Aerospace and Audiovisual Engineering
Academic year: 2018
Degree: MASTER'S DEGREE IN AERONAUTICAL ENGINEERING (Syllabus 2014). (Teaching unit Optional)
ECTS credits: 3 Teaching languages: English

Teaching staff

Coordinator: Miquel Sureda

Others: David González
Manel Soria
David de la Torre

Opening hours

Timetable: To be defined.

Prior skills

The student must have a good understanding of programming, mechanics (rigid-body dynamics), basics spacecraft design and orbital mechanics (two-body problem, Keplerian orbits, Hohmann transfer, basic impulsive maneuvers, launch geometry).

Teaching methodology

The course aims to address the design and construction of CubeSats in detail. Therefore, almost all the lessons are developed in a workshop like format, with students distributed in groups to work in a group project.

Learning objectives of the subject

This course aims to give advanced knowledge of nano-satellites design, with particular emphasis on the design process and construction of CubeSats. As final outcome of the course, each group will define a CubeSat mission and will build and test its payload.

Study load

Total learning time: 75h	Hours large group:	27h	36.00%
	Hours medium group:	0h	0.00%
	Hours small group:	0h	0.00%
	Guided activities:	0h	0.00%
	Self study:	48h	64.00%

205067 - Advanced Cubesat Mission Design

Content

Advanced CubeSat Mission Design

Learning time: 12h
Theory classes: 4h
Self study : 8h

Description:
Introduction: CubeSat missions. Mission management and operations systems engineering.
Review of Orbit Design: The orbit design process. Launch vehicles. Earth coverage. Simple delta-V budgets. Selecting orbits. Common Examples.

Related activities:
Theory lessons.

CubeSat Mission Definition

Learning time: 12h
Theory classes: 4h
Self study : 8h

Description:
Mission Concept: Defining a payload and a CubeSat platform.
Mission Tiemeline: Design, production, test campagns, launch, deployment and operations.

Related activities:
- Theory lessons.
- Workshop.

Advanced Subsystems Design

Learning time: 30h
Theory classes: 15h
Self study : 15h

Description:
- Mechanical Design: Frameworks and structures, stress analysis, loads and stiffness, elastic instabilities, vibration, materials selection, structural analysis.
- Thermal Design: Thermal sources and transport mechanisms in space, thermal balance, thermal control elements, thermal design and implementation.
- Power Systems Design: Power generation, storage, regulation and monitoring. Harnesses and connectors, EMC, shielding and grounding, monitoring and protection.
- Comms and Data Handling Design: Tracking, telemetry and command systems. RF link, data handling, OBCs.
- Guidance, Navigation and ADCS Systems: Orbit determination and control. Attitude determination and control algorithms.
- Mechanisms: Mechanisms kinematics, bearings and lubrication. Motors, drives and wheels. Materials.

Related activities:
- Theory lessons.
- Workshop.

Last update: 19-04-2018

205067 - Advanced Cubesat Mission Design

Payload Design	Learning time: 21h Theory classes: 4h Self study : 17h

Description:
Payload Design Production and Testing: Detailed design, production, ambient test campaign, environmental test campaign.
Payload Delivery.

Related activities:
- Theory lessons.
- Workshop.

Qualification system

The course will be graded based on:

- Individual exercises: 30%
- Final group project: 70%

In case of being unable to hand the individual exercises or not passing them, the student will have a second opportunity.
