   i. Recovery beaches
   j. Recovery landfills
   k. Recovery quarries
6. From the city to the metropolis
   a. The multifunctional center of Can Mulà in Mollet del Vallès (2000)

Specific objectives:
This course aims to show the value of public space in the renovation project of the city.
The public space is the social and functional space par excellence of the city. The streets, squares, gardens and parks give structure to buildings, facilities and equipments of the city. The image of the city is, in most cases, the image of its public space.
The city project layout incorporates the city public spaces, but when the initial offer is low or in highly dense areas of the urban fabric, a greater allocation of public spaces is required. In other cases it is necessary to improve or adapt the existing public space to new social and functional needs.
The course uses the city of Barcelona and its growth forms as reference. The object of study are the public space projects in the city between 1981 and 2011. It is a set of very significant projects about public space in general, published and internationally awarded. The recent renown of the city, from both professional and academics points of view, is mainly due to these interventions. A comprehensive set of institutional publications includes the projects done in this period of time. This is a set of equity value projects, although 25 more years may still be needed for people to appreciate them enough.
The main objective of the course is that students, analyze, visit, understand these public spaces recently developed in Barcelona and project or amend a specific space of the city.

Full-or-part-time: 125h
Theory classes: 15h
Laboratory classes: 30h
Self study: 80h
GRADING SYSTEM

Continuous evaluation (%) Final evaluation (%)
Course notebook 50% 50%
Basic project of public space 50% 50%

The student will conduct a course notebook with notes on classes and visits made. Assistance and synthesis capacity will be assessed. Also perform a basic project management on a new public space or reforming an existing one, which will assess their design skills.

Continuous telematic evaluation
In online teaching situations, continuous assessment will be carried out synchronously and asynchronously by the means established by the University and the School, with a periodic record of academic activity through submissions, forums, questionnaires or any other means facilitated by the Atenea platform, or the alternatives provided to the teaching staff. In the situations in which this telematic teaching is a product of face-to-face teaching that has already begun, or for questions of extra-academic order, the changes in the weightings or regular control systems of the teaching will be communicated in detail to all students by the Athena of each subject.

Telematic final evaluation
If the continuous telematic evaluation is not positive, a second evaluation can be carried out, which will consist of a final test of a global nature in telematic format that will be established in accordance with the criteria of the professor responsible and the media and ICTs provided by the University or School.

The measures for adaptation to non-classroom teaching will be implemented in accordance with the criteria of ICT security and personal data protection to ensure compliance with the legislation on Personal Data Protection (RGPD and LOPDGDD)
