Knowing about heat treatments, coatings, thermomechanical treatments or other techniques that can introduce some changes in surface components in order to suit them to service requirements.

Introduction of main surface analysis and characterization techniques in order to determine quality and effectiveness of modified surfaces mostly applied to metal alloys. Learn about the latest advances in coatings and different utilities of each.

**Teaching methodology**

The course is divided into parts:
- Theory classes
- Practical classes
- Self-study for doing exercises and activities.

In the theory classes, teachers will introduce the theoretical basis of the concepts, methods and results and illustrate them with examples appropriate to facilitate their understanding.

In the practical classes (in the classroom), teachers guide students in applying theoretical concepts to solve problems, always using critical reasoning. We propose that students solve exercises in and outside the classroom, to promote contact and use the basic tools needed to solve problems.

Students, independently, need to work on the materials provided by teachers and the outcomes of the sessions of exercises/problems, in order to fix and assimilate the concepts.

The teachers provide the syllabus and monitoring of activities (by ATENEA).

**Learning objectives of the subject**

Knowing about heat treatments, coatings, thermomechanical treatments or other techniques that can introduce some changes in surface components in order to suit them to service requirements.

Introduction of main surface analysis and characterization techniques in order to determine quality and effectiveness of modified surfaces mostly applied to metal alloys. Learn about the latest advances in coatings and different utilities of each.

## Content

### Module 1: Surface heat treatments

**Description:**
Surface heat treatments in metal alloys
- Flame quenching, induction quenching, laser quenching, electron beam quenching
- Characteristics and requirements
- Applications

**Related activities:**
- Individual questionnaire
- Team work

**Learning time:** 25h
- Theory classes: 9h
- Self study: 16h

### Module 2: Thermochemical treatments

**Description:**
Surface thermomechanic treatments for metallic alloys
- Shot peening
- Laser peening

**Related activities:**
- Individual questionnaire
- Team work

**Learning time:** 25h
- Theory classes: 9h
- Self study: 16h

### Module 3: Surface Engineering-Coatings

**Description:**
- PVD, CVD
- TBC (Thermal Barrier Coatings)
- DLC (Diamond Like Coatings)

**Related activities:**
- Individual questionnaire
- Team work

**Learning time:** 25h
- Theory classes: 9h
- Self study: 16h
220225 - Surface Engineering

**Qualification system**

Deliverables modules 1-2-3: 40%
Teamwork: 40%
Subjective qualification: 20%

**Bibliography**

**Basic:**
