Course guide
220243 - 220243 - Smart Buildings

Unit in charge: Terrassa School of Industrial, Aerospace and Audiovisual Engineering
Teaching unit: 758 - EPC - Department of Project and Construction Engineering.

Degree: MASTER'S DEGREE IN INDUSTRIAL ENGINEERING (Syllabus 2013). (Optional subject).
Academic year: 2023  ECTS Credits: 5.0  Languages: English

LECTURER
Coordinating lecturer: Tejedor Herran, Blanca
Others: Tejedor Herrán, Blanca

PRIOR SKILLS
Basic knowledge of building facilities is recommended

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
2. Proper knowledge for the design, construction and management of buildings and their surroundings, especially in the field of industrial engineering.
4. Acquire the knowledge necessary for the design, implementation, verification and control of facilities, infrastructure and urban development in the field of industrial engineering.

TEACHING METHODOLOGY

The course is structured in three parts: theoretical lessons, practical lessons and project. In the theoretical lessons, the lecturer introduces concepts and methods. To facilitate their understanding, the subject contains several exercises and examples. In the practical lessons, the lecturer guides students in the application of theoretical concepts to solve problems, always using critical reasoning. Students’ project is divided into three deliverables according to theoretical lessons.

LEARNING OBJECTIVES OF THE SUBJECT

STUDY LOAD

<table>
<thead>
<tr>
<th>Type</th>
<th>Hours</th>

</tr>
</thead>
<tbody>
<tr>
<td>Hours small group</td>
<td>15,0</td>
<td>12.00</td>
</tr>
<tr>
<td>Self study</td>
<td>80,0</td>
<td>64.00</td>
</tr>
<tr>
<td>Hours large group</td>
<td>30,0</td>
<td>24.00</td>
</tr>
</tbody>
</table>

Total learning time: 125 h
CONTENTS

(ENG) Introducció als conceptes d'edificis intel·ligents

**Full-or-part-time:** 35h
Theory classes: 10h
Laboratory classes: 5h
Self study: 20h

---

title english

**Description:**
Definition of user's requirements to introduce smart systems in buildings

**Specific objectives:**
The student should determine the requirements of design, construction and management of the building. The goal is to achieve the interaction between facilities and users in order to reduce the impact in terms of economy - energy - environment

**Related activities:**
Short-exercises
2nd delivery of the project

**Full-or-part-time:** 45h
Theory classes: 10h
Laboratory classes: 5h
Self study: 30h

---

**The framework for integrated building systems**

**Description:**
Proposal of strategies for integrated building systems

**Specific objectives:**
The student should design and integrate smart systems to reduce: operational costs, environmental impacts, energy demands. This module pretends to propose a building management system with its respective sensors and actuators to satisfy user's requirements that were defined in Module II

**Related activities:**
Short-exercises
3rd delivery of the project

**Full-or-part-time:** 45h
Theory classes: 10h
Laboratory classes: 5h
Self study: 30h

---

**GRADING SYSTEM**

The qualification system is focused on short activities and a final project. The activities are performed during the session or developed at home (25%). The project is often based on a real case study (75%) and it can be performed individually or in group (depending on the scope of the project or number of students). To ensure a good execution, the project is divided in three deliverables over the course (NP1 = 25%; NP2 = 25%; NP3 = 25%).
EXAMINATION RULES.

Attendance is mandatory (>80% of classes)
