

220272 - Supply Chain Management

Coordinating unit: 205 - ESEIAAT - Terrassa School of Industrial, Aerospace and Audiovisual Engineering
Teaching unit: 732 - OE - Department of Management
Academic year: 2019
Degree: MASTER'S DEGREE IN INDUSTRIAL ENGINEERING (Syllabus 2013). (Teaching unit Optional)
ECTS credits: 5 Teaching languages: Catalan

Teaching staff

Coordinator: José Luís Torres,
Fernandez Alarcon, Vicenç

Degree competences to which the subject contributes

Specific:

1. Ability to exercise direction in organizations and departments.
2. Ability to design, develop and apply analytical methods (quantitative methods, statistical models and decision tools) for making strategic, tactical and operational decisions in organizations.
3. Ability to analyze, diagnose, design solutions and manage complex systems that integrate various resources of an organization keeping in mind the business environment.
4. Ability to apply theories and inherent principles of the organization in order to analyze complex and uncertainty situations, and make decisions using engineering tools.

Teaching methodology

The teaching methodology is divided into three parts:

- * Face sessions to present content.
- * Face sessions of practical work (exercises and problems).
- * Self study and exercises and activities.

At its exhibition content, teachers will introduce the theoretical foundations of the subject, concepts, methods and results and illustrate them with examples appropriate to facilitate understanding.

In practical sessions in the classroom, teachers guide students in applying theoretical concepts to solve problems, always basing critical reasoning. We propose that students solve exercises in the classroom and outside the classroom, to encourage contact and use the basic tools needed to solve problems.

Students, individually, must work the material provided by the teachers and the results of the working sessions-problems to fix and assimilate concepts. Teachers provide a curriculum and monitoring activities (ATENEA).

Learning objectives of the subject

220272 - Supply Chain Management

Study load

Total learning time: 125h	Hours large group:	30h	24.00%
	Hours small group:	15h	12.00%
	Self study:	80h	64.00%

Content

(ENG) Module 1: The logistic system	Learning time: 62h Theory classes: 15h Practical classes: 7h Self study : 40h
Description: Introduction to Logistics Localization strategy Warehouse Management Evaluation of costs and investments	
(ENG) Module 2: Supply Chain Management	Learning time: 63h Theory classes: 15h Practical classes: 8h Self study : 40h
Description: Principles of design and supply chain management The information technology in the supply chain Concepts applicable to international trade supply chain Sustainability principles applicable to the supply chain Application of Lean tools for supply chain	

220272 - Supply Chain Management

Qualification system

The final grade depends on the following activities:

- 3a Activity (mid-semester exam -Module 1), weight: 40%
- 4a Activity (mid-semester exam -Module 2), weight: 40%
- 5a, 6th and 7th activity (Problems and Proposed synthesis): 20%

In the event of unsatisfactory results on any of the Mid-Semester exams (3rd and 4th Activities), students will have another chance to address the unsatisfactory results, with another exam, that will be scheduled for the final exams date. The exam mark will be evaluated between 0 and 10, and the mark will update the previous mark, only if it's higher than the one obtained in the Mid-Semester exam.

For those students who meet the requirements and submit to the reevaluation examination, the grade of the reevaluation exam will replace the grades of all the on-site written evaluation acts (tests, midterm and final exams) and the grades obtained during the course for lab practices, works, projects and presentations will be kept.

If the final grade after reevaluation is lower than 5.0, it will replace the initial one only if it is higher. If the final grade after reevaluation is greater or equal to 5.0, the final grade of the subject will be pass 5.0.
