### Learning objectives of the subject

Applied knowledge of materials science and technology; mechanics and thermodynamics; fluid mechanics; aerodynamics and flight mechanics; navigation systems and air traffic; aerospace technology; structural theory; economy and production; projects; environmental impact.

### Study load

<table>
<thead>
<tr>
<th>Total learning time: 125h</th>
<th>Hours large group: 30h</th>
<th>24.00%</th>

## Module 4: Inspection and testing

**Learning time:** 10h  
Theory classes: 2h  
Practical classes: 2h  
Self study: 6h

**Description:**  

**Related activities:**  
- Theory and practical classes  
- Laboratory session: Mechanical characterization of composites

## Module 5: Bibliographic research project

**Learning time:** 17h  
Theory classes: 2h  
Practical classes: 2h  
Self study: 13h

**Description:**  
Bibliographic research by teams on suggested topics of the course subject. Writing of a bibliography-based document on suggested topics. Presentation of bibliography-based works made by teams.

**Related activities:**  
- Bibliographic research-based work on a proposed topic, realised by teams  
- Workshop of bibliographic research about project topics  
- Delivering and oral presentation of bibliographic research works

## Module 6: Micromechanical analysis

**Learning time:** 16h  
Theory classes: 5h  
Practical classes: 1h  
Self study: 10h

**Description:**  
6. Micromechanical approaches (mechanistic, analytics and empirics); Volume and mass fractions; Representative volume element RVE; Serial-parallel rule of mixtures and modified; Evaluation of the composite elastic properties; Ultimate strengths; Micromechanical failures; Damage models; Hygrothermoelastic (HTE) effects.

**Related activities:**  
Theory and practical classes
Module 7: Mesomechanical analysis

**Description:**
Terminology and notation; Compatibility, constitutive and equilibrium equations; Generalized Hook's Law; Stress-strain relations of elastic materials; Degrees of anisotropy; Engineering constants; Plane stress state and constitutive relations; Constitutive relations of unidirectional ply; Stiffness of on-axis ply; Engineering constants of on-axis ply; Global and local coordinate references; Multiangle transformation matrices; Coupling effects; Mutual influence coefficients; Hygrothermoelastic (HTE) effects; Ply strength; Failure theories; Polynomial criteria; Failure envelopes.

**Related activities:**
Theory and practical classes

Learning time: 23h

- Theory classes: 5h
- Practical classes: 3h
- Self study: 15h

Module 8: Macromechanical analysis

**Description:**
Stacking sequence and laminate code; Classical laminated plate theory; Kirchhoff hypothesis; Strain-stress relations; In-plane force and moment resultants; General load-deformation relations; Laminate stiffnesses; ABD matrices; Laminate coupling relationships; Classification of laminates; Effective engineering constants; Design considerations; Normalized matrices; Laminate effective engineering constants; Sandwich laminates.

**Related activities:**
Theory and practical classes

Learning time: 23h

- Theory classes: 5h
- Practical classes: 3h
- Self study: 15h

---

**Qualification system**

Part 1 (50%): Exam 1 (40%) + Practical work (10%)
Part 2 (50%): Exam 2 (40%) + Practical work (10%)

Eventual low marks obtained in the first exam, will be able to recuperate by means of a procedure that will be provided.

For those students who meet the requirements and submit to the reevaluation examination, the grade of the reevaluation exam will replace the grades of all the on-site written evaluation acts (tests, midterm and final exams) and the grades obtained during the course for lab practices, works, projects and presentations will be kept. If the final grade after reevaluation is lower than 5.0, it will replace the initial one only if it is higher. If the final grade after reevaluation is greater or equal to 5.0, the final grade of the subject will be pass 5.0.
