220333 - Spacecraft Design

Coordinating unit: 205 - ESEIAAT - Terrassa School of Industrial, Aerospace and Audiovisual Engineering

Teaching unit: 220 - ETSEIAT - Terrassa School of Industrial and Aeronautical Engineering

Academic year: 2018

Degree: MASTER'S DEGREE IN AERONAUTICAL ENGINEERING (Syllabus 2014). (Teaching unit Optional)
MASTER'S DEGREE IN SPACE AND AERONAUTICAL ENGINEERING (Syllabus 2016). (Teaching unit Optional)

ECTS credits: 5 Teaching languages: English

Teaching staff

Coordinator: Miquel Sureda

Opening hours

Timetable:

Prior skills

Basic space engineering knowledge (Subject 220057 - Space Engineering)

Teaching methodology

The main objective of this course is to provide the required knowledge and ressources to design a space mission. A series of lectures will introduce the different aspects involved in a space mission design. The student will apply this knowledge and ressources to carry out an assignment and a project, with guidence and supervision during the whole semester.

A mid-term and final exam will test the knowledge adquired during the semester.

Learning objectives of the subject

Ability to analyze and design a space mission:

This subject will provide the studen basic knowledge on Systems Engineering and Mission Analysis, as well as the required knowledge and ressources to design a space vehicle, including the payload and the following subsystems:

* Structures
* Electrical Power System
* Attitude Control
* Communication
* Navigation
* Propulsion
* Environmental Control and Life Support System

220333 - Spacecraft Design

Study load

Total learning time: 125h	Hours large group:	30h	24.00%
	Hours small group:	15h	12.00%
	Self study:	80h	64.00%

Last update: 05-10-2018

220333 - Spacecraft Design

Content

Introduction

Learning time: 5h

Theory classes: 2h
Self study : 3h

Description:
Introduction to the course.
Past, present and future of space missions: hystory of space missions, which missions are currently being carried out?, which are the future objectives of space agencies and private companies?

Related activities:
Mid-term Exam

Systems Engineering

Learning time: 12h

Theory classes: 4h
Laboratory classes: 2h
Self study : 6h

Description:
Introduction to Systems Engineering: what are the phases of a project? What is concurrent engineering? How can the cost of a mission be estimated?
Mission Concept Design: Definition of concepts such as mission statement, objectives, requirements and constrains.

Related activities:
Assignment

Mid-Term Exam

Mission Analysis and Characterization

Learning time: 41h

Theory classes: 6h
Laboratory classes: 5h
Self study : 30h

Description:
Review of orbital mechanics.
Identification of alternative mission concepts and architectures.
Preliminary concepts and trade-offs.

Related activities:
Project (Part 1: Mission Analysis and Characterization)
Mid-term Exam

Last update: 05-10-2018

220333 - Spacecraft Design

Spacecraft Subsystems	Learning time: 67h Theory classes: 18h Laboratory classes: 8h Self study : 41h

Description:
Review of Subsystems:
* electric power
* thermal control
* structures

Definition, design process and technology options for each subsystem:
* propulsion
* atittude and orbit determination and control
* communication and data handling
* environmental control and life support
* payload
* launchers

Related activities:
Project (Part 2: Prelinimary Design)
Final Exam

Qualification system

Final Grade = Assignment (10%) + Project (60%) + Final Exam (30%)

In case of being unable to hand the assignments or not passing them, the student will have a second opportunity for the day of the final exam.

For those students who meet the requirements and submit to the reevaluation examination, the grade of the reevaluation exam will replace the grades of all the on-site written evaluation acts (tests, midterm and final exams) and the grades obtained during the course for lab practices, works, projects and presentations will be kept.
If the final grade after reevaluation is lower than 5.0, it will replace the initial one only if it is higher. If the final grade after reevaluation is greater or equal to 5.0, the final grade of the subject will be pass 5.0
