220340 - Extension of Rocket Engines

**Coordinating unit:**
205 - ESEIAAT - Terrassa School of Industrial, Aerospace and Audiovisual Engineering

**Teaching unit:**
220 - ETSEIAT - Terrassa School of Industrial and Aeronautical Engineering

**Academic year:**
2019

**Degree:**
MASTER'S DEGREE IN AERONAUTICAL ENGINEERING (Syllabus 2014). (Teaching unit Optional)
MASTER'S DEGREE IN SPACE AND AERONAUTICAL ENGINEERING (Syllabus 2016). (Teaching unit Optional)

**ECTS credits:**
5

**Teaching languages:**
English

**Teaching staff**

**Coordinator:**
Manel Soria Guerrero
Oriol Lizandra Dalmases

**Prior skills**

Previous concepts include knowledge of propulsion systems for aircraft and spacecraft, given in any bachelor's degree in aerospace engineering and reviewed in previous subjects of this Master's degree, as well as familiarity with the use of computing tools for engineering.

**Degree competences to which the subject contributes**

**Specific:**
CEEPROP2. MUEA/MASE: Advanced applied knowledge of the design, manufacture and maintenance of propulsion systems (specific competency for the specialisation in Propulsion).
CEEAEROP1. MUEA/MASE: The ability to analyse airport operations, planning and air transport (specific competency for the specialisation in Airports).

**Teaching methodology**

Classroom lectures combined with assignments to be solved during the class with the help of the professor

**Learning objectives of the subject**

Understand advanced concepts of rocket engines design such as cooling, propellant feeding methods, instabilities and nozzle design.
Acquire a hands-on experience on experimental testing of small scale rocket engines with gas, solid and hybrid propellants
Understand the fundamentals of cryogenic propellants

**Study load**

# 220340 - Extension of Rocket Engines

## Content

<table>
<thead>
<tr>
<th>Module 1: Nozzle design. Method of characteristics</th>
<th>Learning time: 14h</th>
</tr>
</thead>
<tbody>
<tr>
<td>Description: Analysis of design of rocket nozzles using the method of characteristics.</td>
<td></td>
</tr>
<tr>
<td>Theory classes: 3h</td>
<td></td>
</tr>
<tr>
<td>Practical classes: 1h</td>
<td></td>
</tr>
<tr>
<td>Self study: 10h</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Module 2: Nozzle cooling. Liquid cooling, ablation cooling, thermal inertia</th>
<th>Learning time: 15h</th>
</tr>
</thead>
<tbody>
<tr>
<td>Description: Liquid cooling</td>
<td></td>
</tr>
<tr>
<td>Ablation cooling</td>
<td></td>

## Module 5: Combustion instabilities

**Description:**
- Fundamental aspects
- Modelling of instabilities

**Learning time:** 16h
- Theory classes: 4h
- Practical classes: 2h
- Self study: 10h

## Module 6: Modelling of solid propellant rockets

**Description:**
- Modelling pressure transients in combustion chamber.
- Computational geometry tools for the prediction of burning profiles.
- Two dimensional and three dimensional grain profiles.

**Learning time:** 16h
- Theory classes: 4h
- Practical classes: 2h
- Self study: 10h

## Module 7: Rocket trajectories

**Description:**
- Trajectory modelling
- Gravity turn
- Coupling between engine and trajectory analysis.

**Learning time:** 16h
- Theory classes: 4h
- Practical classes: 2h
- Self study: 10h

## Module 8: Rocket testing and instrumentation

**Description:**
- Load-cells
- Telemetry
- Ignition systems
- Measuring solid fuel burning rates.

**Learning time:** 16h
- Theory classes: 4h
- Practical classes: 2h
- Self study: 10h
Qualification system

Assignments 30%
Project 40%
Exam 30%

Students with a grade below 5.0 in the assignments and/or the project, will be able to do an additional exam in order to compensate for the poor results. The new grade will replace the original only if it is higher. The maximum grade that can be obtained with this additional exam is 5.0.

For those students who meet the requirements and submit to the reevaluation examination, the grade of the reevaluation exam will replace the grades of all the on-site written evaluation acts (tests, midterm and final exams) and the grades obtained during the course for lab practices, works, projects and presentations will be kept.
If the final grade after reevaluation is lower than 5.0, it will replace the initial one only if it is higher. If the final grade after reevaluation is greater or equal to 5.0, the final grade of the subject will be pass 5.0
