Course guide
220604 - 220604 - Applied Dynamics

Unit in charge: Terrassa School of Industrial, Aerospace and Audiovisual Engineering
Teaching unit: 712 - EM - Department of Mechanical Engineering.
Degree: MASTER'S DEGREE IN AUTOMATIC SYSTEMS AND INDUSTRIAL ELECTRONICS (Syllabus 2012). (Compulsory subject).

Academic year: 2022  ECTS Credits: 5.0  Languages: Catalan, Spanish

LECTURER

Coordinating lecturer: FRANCISCO JAVIER FREIRE VENEGAS
Others: BEATRIZ PURAS GÓMEZ
        ANA MARAÑON MARTINEZ
        CARLOS GUSTAVO DIAZ GONZALEZ
        CARLOS RIO CANO

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
1. Use the mechanics simbolgy and determine the number of drivers needed to achieve an exact motion.
2. Solve multibody motion equations.

Transversal:
4. EFFECTIVE USE OF INFORMATION RESOURCES. Managing the acquisition, structure, analysis and display of information from the own field of specialization. Taking a critical stance with regard to the results obtained.

Basic:
3. Improve self-learning capacity

TEACHING METHODOLOGY

The teaching methodology is divided into three parts:

* Face-to-face sessions for content exposure.
* Classroom sessions of practical work (exercises and problems).
* Presentation of a project.
* Self study study and completion of exercises and activities.

In the contents exposition sessions, the teaching staff will introduce the theoretical bases of the subject, concepts, methods and results illustrating them with convenient examples to facilitate their understanding.

In the sessions of practical work in the classroom, the teaching staff will guide the students in the application of the theoretical concepts to solve problems, based at all times on the critical reasoning. Exercises will be proposed that students solve in the classroom and outside the classroom, in order to encourage the contact and use of the basic tools needed to solve problems.

In the tutorial sessions, the teaching staff will guide the students in the realization of the project where the theoretical concepts will be applied, based at all times on the critical reasoning.

The student, independently, must work the material provided by the teaching staff in order to assimilate and set the concepts. The teaching staff will provide a plan for study and follow-up activities (ATENEA).
LEARNING OBJECTIVES OF THE SUBJECT

The Dynamics Applied introduces the student to the concepts, principles and basic fundamentals of the dynamics of multi-body mechanical systems. Starting with the introduction of the basic concepts of movements, forces and masses, the subject addresses the methods to obtain the equations of the movement in multi-body systems.

STUDY LOAD

<table>
<thead>
<tr>
<th>Type</th>
<th>Hours</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hours large group</td>
<td>31,0</td>
<td>24.80</td>
</tr>
<tr>
<td>Self study</td>
<td>80,0</td>
<td>64.00</td>
</tr>
<tr>
<td>Hours small group</td>
<td>14,0</td>
<td>11.20</td>
</tr>
</tbody>
</table>

Total learning time: 125 h

CONTENTS

-Kinematics

Description:
Structural analysis of mechanisms
Velocity analysis
Acceleration analysis.

Related activities:
Activity 1
Activity 2
Activity 3
Activity 4
Activity 5

Full-or-part-time: 45h
Theory classes: 10h
Laboratory classes: 5h
Self study: 30h

-Transmissions

Description:
Gears
Gearbox

Related activities:
1,2,3,4,5

Full-or-part-time: 17h
Theory classes: 5h
Laboratory classes: 2h
Self study: 10h
### Mechanisms Statics

**Description:**
Force, work and performance in mechanisms  
Reduction of forces: graphical method  
Virtual work and power

**Related activities:**
1, 2, 3, 4, 5

**Full-or-part-time:** 18h  
Theory classes: 6h  
Laboratory classes: 2h  
Self study: 10h

### Mechanisms Dynamics

**Description:**
Energy theorem  
Exergian equation  
Lagrange equations  
D'Alembert method

**Related activities:**
1, 2, 3, 4, 5

**Full-or-part-time:** 45h  
Theory classes: 10h  
Laboratory classes: 5h  
Self study: 30h

### ACTIVITIES

#### SESSIONS LARGE GROUPS / THEORY

**Description:**
Previous and subsequent preparation of the sessions of theory and assistance to them.

**Specific objectives:**
To transfer the knowledge necessary for a correct interpretation of the contents developed in the sessions of large groups, resolution of doubts in relation to the subject of the subject and development of the specific competence. To know the principles of the theory of machines and mechanisms.

**Material:**
General bibliography of the subject

**Delivery:**
During some sessions may be proposed non-attendance exercises, individually or in small groups.

**Full-or-part-time:** 52h  
Theory classes: 26h  
Self study: 26h
SESSIONS SMALL GROUPS / PROBLEMS

Description:
Previous and subsequent preparation of the sessions of problems and of practices and assistance to them.

Specific objectives:
1. Acquire the skills necessary for a correct interpretation of the problems of the subject, as well as a satisfactory resolution of these. Preparation for the practical part of the exams of the subject. Development of generic competence Capacity to generate and solve the equations of movement for multi-body mechanical systems.

Material:
General bibliography of the subject Exercises in the Atenea platform. Collection of problems of the subject.

Delivery:
During these sessions, the practical exercises, face-to-face sessions in class or virtual, individually or in small groups, would be developed by the teaching staff and the student. During some sessions you can propose non-attendance exercises, individually or in small groups.

Full-or-part-time: 22h
Laboratory classes: 8h
Self study: 14h

SESSIONS GROUPS SMALL / TUTORIAL PROJECT

Description:
'Monitoring of the project in small groups. In these sessions, students will present the current status of their project, will discuss and propose the work they will have to present to the next session.

Specific objectives:
Recognize and apply the concepts studied in the project.

Material:
General bibliography of the subject Exercises on the Athena platform.
Notes on the subject.

Delivery:
It will depend on each session, according to the conditions specified in each particular case.

Full-or-part-time: 24h
Laboratory classes: 8h
Self study: 16h
REALIZATION OF THE PROJECT

Description:
Autonomous work to make the project.

Specific objectives:
1. Apply the skills necessary for a correct interpretation of the problems of the subject, as well as a satisfactory resolution of them.

Material:
General bibliography of the subject Exercises in the Atenea platform. Collection of problems of the subject

Delivery:
The project,

Full-or-part-time: 18h
Self study: 18h

PROJECT PRESENTATION AND DISCUSSION

Description:
Each group will present their project and the teacher will ask questions to each one of the members of the group.

Specific objectives:
The test must demonstrate that the student has acquired and assimilated the concepts, principles and basic fundamentals of the whole subject.

Full-or-part-time: 9h
Theory classes: 3h
Self study: 6h

GRADING SYSTEM

The final grade of the course depends on five evaluative acts:

* 1st and 2nd activities (problems), weight: 10%
* 3rd activity (tutorials), weight: 30%
* 4th activity (project), weight: 30%
* 5th activity (presentation and defense), weight: 30%

There are no recoveries of the first two evaluations in a formal way. Each one will have 3-4 assessment minutes throughout the course.
In any case, if the project is acceptable and is defended with correctness, the recovery of the evaluations will be automatic.
For those students who meet the requirements and submit to the reevaluation examination, the grade of the reevaluation exam will replace the grades of all the on-site written evaluation acts (tests, midterm and final exams) and the grades obtained during the course for lab practices, works, projects and presentations will be kept.
If the final grade after reevaluation is lower than 5.0, it will replace the initial one only if it is higher. If the final grade after reevaluation is greater or equal to 5.0, the final grade of the subject will be pass 5.0.
EXAMINATION RULES.

The problems proposed in activities 1 and 2 will be carried out in groups and in writing. You may be asked to be publicly defended and to be discussed. Alternatively, a collection of problems may be presented, but the score will be lower.

Activities 3, 4, 5 will be carried out in groups. But at any time each member of the group must be able to respond to the totality of the work presented.

A 20 minute presentation and 10 questions have been scheduled for the presentation and defense.
